Level 3 Certificate MATHEMATICAL STUDIES

Paper 2A Statistical techniques

1350/2A

Wednesday 23 May 2018 Morning

Time allowed: 1 hour 30 minutes

For this paper you must have:

- a clean copy of the Preliminary Material, Formulae Sheet and Statistical Tables (enclosed)
- a scientific calculator or a graphics calculator
- a ruler.

At the top of the page, write your surname and other names, your centre number, your candidate number and add your signature.

INSTRUCTIONS

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Answer ALL questions.
- You must answer the questions in the spaces provided. Do not write on blank pages.
- Show all necessary working; otherwise, marks for method may be lost.
- Do all rough work in this book. Cross through any work you do not want to be marked.
- The FINAL answer to questions should be given to an appropriate degree of accuracy.
- You may NOT refer to the copy of the Preliminary Material that was available prior to this examination.
 A clean copy is enclosed for your use.

INFORMATION

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 60.
- You may ask for more answer or graph paper, which must be tagged securely to this answer booklet.
- The paper reference for this paper is 1350/2A.

DO NOT TURN OVER UNTIL TOLD TO DO SO

Answer ALL questions in the spaces provided

1	Use BREXIT from the Preliminary Material.				
1 (a)	The UK population was 65 million in June 20				
	one deci	centage of the mal place, we bership refere	e eligible vote		
	Circle yo	ur answer. [1	mark]		
	51.7	71.5	71.6	72.3	
1 (b)	•	rovement that the Prelimina axes.			
		TWO other im to each graph		hat could	
	GRAPH 1	I: EU immigra	tion in the UK		
	Improver	ment 1

Improveme	ent 2

1 (c)	For 2015, the UK paid the EU £14.6 billion.
	During the campaign, Vote Leave claimed that the EU costs the UK over £350 million every week.
	Is Vote Leave's claim justified?
	You MUST show your working. [2 marks]

BLANK PAGE

1 (d)	Many people made comments on social media about the referendum.
	Here are three of the comments.
	TIM: "Nearly 20% of eligible voters didn't vote in the EU referendum."
	KELLY: "The ratio of Remain votes to Leave votes is close to 12 : 13"
	LARISSA: "If 2 million of those who didn't vote at all had voted to remain in the EU, Remain would have won with over 51% of the votes."
	Using the tables on pages 4 and 5 of the Preliminary Material, check the validity of these comments.
	You MUST show your calculations. [7 marks]

2	Maria is planning to move to Spain. She wants to buy a house which, including all associated fees, will cost €327 500
	In May 2014 she opened a Spanish bank account with a deposit of £17 000 The account pays no interest.
	The current exchange rate is £1 = €1.08
	This is a decrease of 10% from the May 2014 rate.
	Maria owns a house in England which she bought for £253 000. She has no mortgage. The house is now worth 12.5% more than she paid for it.
	Advise Maria on whether the money she gets from selling her house in England, together with the money in her Spanish bank account, will be enough to buy the house in Spain.
	You MUST show your working. [6 marks]

3 (a) Which of the following CANNOT be a correct value for a product moment correlation coefficient?

Circle your answer. [1 mark]

-0.765

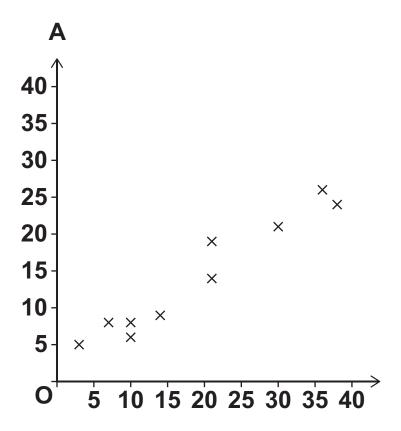

0.000

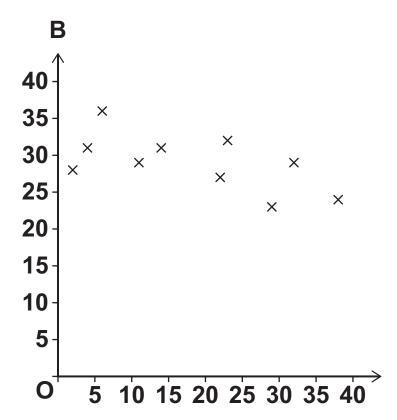

13 25

1.379

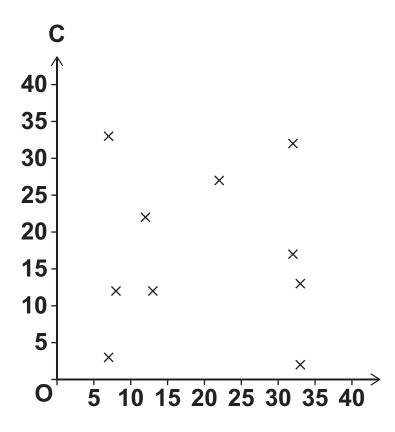

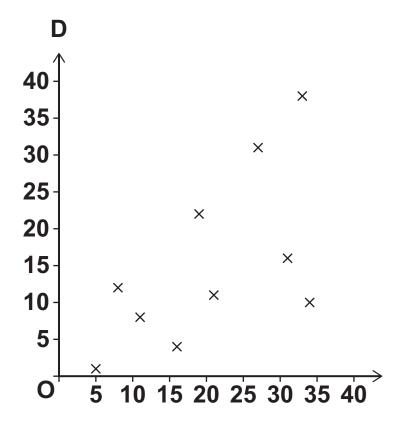

3 (b) Here, and on page 17, are four scatter diagrams, A, B, C and D.

BLANK PAGE

Complete the table by matching the coefficient to the letter of the correct diagram on pages 16–17.

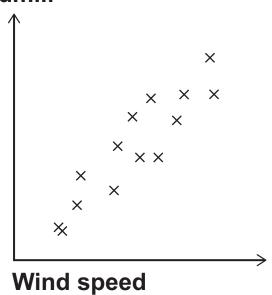

You do NOT need to calculate the coefficient. [2 marks]

Product moment correlation coefficient	0.619	0.970	-0.0153	-0.608
Scatter diagram		_		

3 (c) The scatter diagram shows the correlation between the speed of the blades of a windmill and wind speed.

Speed of the blades of a windmill

.

Bill looks at the diagram and says,	
"Increasing the speed of the blades of the windmill causes the wind speed to increase."	
Is Bill correct? Explain your answer. [1 mark]	

4 Every weekday, Alex drives from home to work.

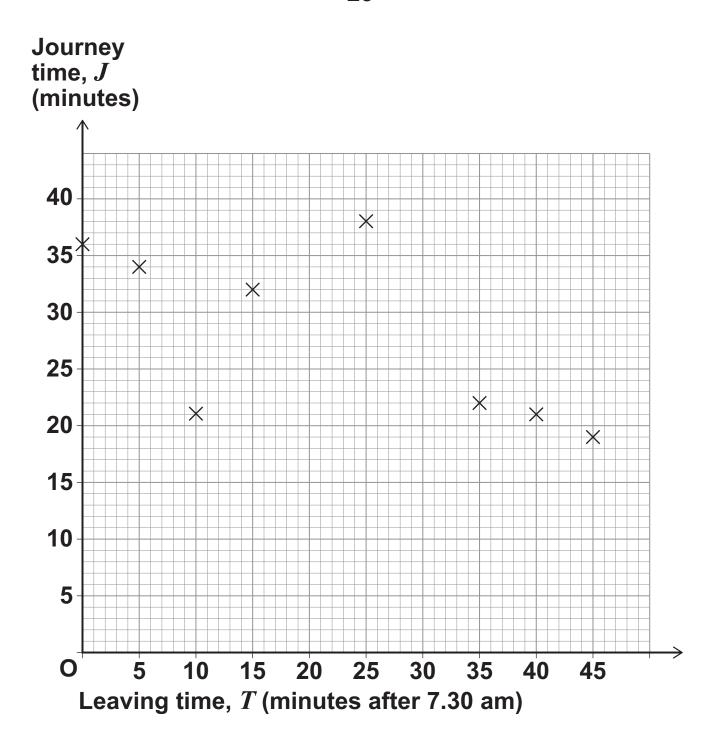

He notices that his journey time changes depending upon the time he leaves home.

He collects this data over a 2-week period.

Leaving time, <i>T</i> (minutes after 7.30 am)	45	15	35	5	10	25	40	0	30	20
Journey time, J (minutes)	19	32	22	34	21	38	21	36	23	27

4(a) Complete the scatter diagram of J against T by plotting the last two points from the table above. [1 mark]

4 (b) (i)	It is appropriate to exclude two of the points when calculating the equation of the regression line of J on T . Identify the two points. Give a reason for your answer. [2 marks] The points are (,) and (,) Reason
4 (b) (ii)	Excluding the two points you identified in
	question 4 (b) (i), calculate the equation of the regression line of J on T . [2 marks]
	Answer

4 (b) (iii)	Draw your regression line on the scatter diagram on page 23. [2 marks]					

(c)	Work out the time that Alex should leave home in order to arrive at 8.30 am. [4 marks]

5 Students on a business course are planning to set up a sweet shop in their college as part of their enterprise project.

The average weekly sales, in £, of sweet shops in similar-sized colleges are normally distributed with mean μ and variance 1750

A random sample of sweet shops in 18 similar-sized colleges had the following average weekly sales, in £.

210 294	308	312	195	265	251	215	224	262
294	190	233	320	196	240	271	320	245

5 (a)	Construct a 95% confidence interval for μ . [5 marks]

	Answer
5 (b)	The students on the business course claim that the mean of the average sales of sweet shops in similar-sized colleges is £250 per week.
	Comment on this claim.
	You do NOT need to do any additional working to answer this question. [2 marks]

BLANK PAGE

6	A person's total cholesterol level is the amount of cholesterol in their blood.
	The UK government recommends that healthy adults should have a total cholesterol level below 5.0 millimoles per litre (mmol/l).
	The total cholesterol level of an adult in the UK can be modelled by a normal distribution with mean 5.6 mmol/l and standard deviation 1.3 mmol/l.
6 (a)	Work out the probability that a randomly chosen adult in the UK has a total cholesterol level below 5.0 mmol/l. [3 marks]

Answer			

6 (b)	Show that approximately one in every three adults in the UK has a total cholesterol level within 10% of the mean total cholesterol level. [4 marks]

· · · · · · · · · · · · · · · · · · ·
·

6 (c)	Estimate the total cholesterol level exceeded by 75% of adults in the UK. [3 marks]

[Turn over]

6 (d)	A healthcare research company claims that
	adults in a small town in the UK have lower
	total cholesterol level than the mean for all
	adults in the UK.

They recorded the total cholesterol level, in mmol/l, of 10 adults in the small town.

Here are the results.

5.5	5.7	3.4	5.8	5.7	3.9	3.7	5.4	4.9	6.1
	_	_		_		_	_	_	_

6 (d) (i)	Show an appropriate calculation to justify their claim. [1 mark]

6 (d) (ii)	Suggest ONE way that the company could improve the accuracy of their claim. [1 mark]	
		12

[Turn over]

7 (a)	Define a simple random sample. [1 mark]

[Turn over]

Here is a list of the teachers at a secondary school.

Ms Young	Mr Burns	Mr Chan	Mr Lunn	Ms Carr
Mr Singh	Mr Davies	Ms Gibson	Ms Root	Mr Jas
Ms Amat	Ms Walton	Ms Jaleel	Ms Kang	Ms Fisher
Ms James	Mr Smith	Mrs Khan	Ms Jones	Mr Ganzert
Mr Cook	Ms Hobbs	Ms Osborne Mr Fairly	Mr Fairly	Mr Pritchard

To check a new marking policy, the headteacher wants to look at the marking of five teachers.

She plans to choose the five teachers using simple random sampling. To do this she uses the table of random numbers on page 43.
