A-level PSYCHOLOGY

Paper 1 Introductory topics in psychology

Monday 4 June 2018

Afternoon

Time allowed: 2 hours

Materials

For this paper you may use:

- a calculator.

Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer **all** questions. You must answer the questions in the spaces provided. Do **not** write outside the box around each page or on blank pages.
- Do all rough work in this book. Cross through any work you do not want to be marked.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 96.
- Questions should be answered in continuous prose. You will be assessed on your ability to:
 - use good English
 - organise information clearly
 - use specialist vocabulary where appropriate.

Section B**Memory**

Answer **all** questions in this section.

Do not write
outside the
box

A researcher investigated the working memory model using a laboratory experiment. Forty students from a local college volunteered to take part.

In **Condition A**, 20 students performed the following two tasks at the same time:

- mentally counting backwards from 100
- tracking coloured shapes on a computer screen.

In **Condition B**, 20 different students performed the following two tasks at the same time:

- mentally counting backwards from 100
- reading a poem out loud.

The researcher predicted that the performance of students in **Condition A** would be better than the performance of students in **Condition B**.

0	4
---	---

Name the **two** components of working memory that would be involved in the performance of the tasks in **Condition A**.

[2 marks]

Mentally counting backwards from 100: _____

Tracking coloured shapes on a computer screen: _____

0	5
---	---

Briefly explain **two** ways in which the working memory experiment described above could be improved.

[4 marks]

Do not write
outside the
box

Extra space

0 6

Discuss **one** strength of the working memory model.

[4 marks]

Section D

Psychopathology

Answer **all** questions in this section.

Do not write
outside the
box

For each question completely fill in the circle alongside the appropriate answer.

CORRECT METHOD

WRONG METHODS

If you want to change your answer you must cross out your original answer as shown.

If you wish to return to an answer previously crossed out, ring the answer you now wish to select as shown.

You may do your working in the blank space around each question but this will not be marked. Do **not** use additional sheets for this working.

A researcher studying depression wanted to see whether or not there was a relationship between level of self-esteem and negative schema score. She constructed two questionnaires and asked ten people who had been diagnosed with depression to complete them.

One questionnaire measured the participant's level of self-esteem. A low score (out of 50) indicated low self-esteem.

The other questionnaire measured whether the participant showed evidence of negative schema. A low score (out of 50) indicated evidence of negative schema. The two sets of results for each participant are shown in the table below.

Table 1 Self-esteem score and negative schema score for each patient

Participant	1	2	3	4	5	6	7	8	9	10
Self-esteem score	8	9	9	11	13	17	18	18	20	22
Negative schema score	11	15	13	18	12	14	20	16	17	19

1 3

Is negative schema score best described as measuring a cognitive, emotional or behavioural characteristic of depression? Shade **one** box only.

A Cognitive

B Emotional

C Behavioural

[1 mark]

Do not write

box

1 4

Draw a suitable graphical display to represent the data in **Table 1**. Label your graph appropriately.

[4 marks]

Title: _____

The researcher analysed the data in **Table 1** using a Spearman's rho statistical test.

1 5

With reference to level of measurement, explain why Spearman's rho is an appropriate statistical test for this data.

[2 marks]

Turn over ►

Do not write
outside the
box

1 6

Estimate the correlation coefficient most likely to result from analysis of the data in **Table 1**. Shade **one** box only.

The correlation coefficient would be approximately

+0.95

+0.70

+0.30

+0.15

[1 mark]

1 7

Discuss the cognitive approach to treating depression.

[16 marks]

You may use this space to plan your answer.
