Mark scheme

83001F
June 2017

Version: 1.0 Final

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Assessment Writer.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from aqa.org.uk

Glossary for Mark Schemes

GCSE examinations are marked in such a way as to award positive achievement wherever possible. Thus, for GCSE Mathematics papers, marks are awarded under various categories.

If a student uses a method which is not explicitly covered by the mark scheme the same principles of marking should be applied. Credit should be given to any valid methods. Examiners should seek advice from their senior examiner if in any doubt.

M	Method marks are awarded for a correct method which could lead to a correct answer.
A	Accuracy marks are awarded when following on from a correct method. It is not necessary to always see the method. This can be implied.
B	Marks awarded independent of method.
ft	Follow through marks. Marks awarded for correct working following a mistake in an earlier step.
SC	Special case. Marks awarded for a common misinterpretation which has some mathematical worth.
M dep	A method mark dependent on a previous method mark being awarded.
B dep	A mark that can only be awarded if a previous independent mark has been awarded.
oe	Or equivalent. Accept answers that are equivalent. eg accept 0.5 as well as $\frac{1}{2}$
[a, b]	Accept values between a and b inclusive.
[a, b)	Accept values a ≤ value < b
3.14 …	Accept answers which begin 3.14 eg 3.14, 3.142, 3.1416
Use of brackets	It is not necessary to see the bracketed work to award the marks.

Examiners should consistently apply the following principles

Diagrams

Diagrams that have working on them should be treated like normal responses. If a diagram has been written on but the correct response is within the answer space, the work within the answer space should be marked. Working on diagrams that contradicts work within the answer space is not to be considered as choice but as working, and is not, therefore, penalised.

Responses which appear to come from incorrect methods

Whenever there is doubt as to whether a student has used an incorrect method to obtain an answer, as a general principle, the benefit of doubt must be given to the student. In cases where there is no doubt that the answer has come from incorrect working then the student should be penalised.

Questions which ask students to show working

Instructions on marking will be given but usually marks are not awarded to students who show no working.

Questions which do not ask students to show working

As a general principle, a correct response is awarded full marks.

Misread or miscopy

Students often copy values from a question incorrectly. If the examiner thinks that the student has made a genuine misread, then only the accuracy marks (A or B marks), up to a maximum of 2 marks are penalised. The method marks can still be awarded.

Further work

Once the correct answer has been seen, further working may be ignored unless it goes on to contradict the correct answer.

Choice

When a choice of answers and/or methods is given, mark each attempt. If both methods are valid then M marks can be awarded but any incorrect answer or method would result in marks being lost.

Work not replaced

Erased or crossed out work that is still legible should be marked.

Work replaced

Erased or crossed out work that has been replaced is not awarded marks.

Premature approximation

Rounding off too early can lead to inaccuracy in the final answer. This should be penalised by 1 mark unless instructed otherwise.

Continental notation

Accept a comma used instead of a decimal point (for example, in measurements or currency), provided that it is clear to the examiner that the student intended it to be a decimal point.

	15 × 8 or 120	M1	
	500 – their 120 or 380	M1dep	
	their 380 ÷ 30 or 12(…)	M1dep	oe builds up in 30s to at least their 380 – 30 or builds up in 30s from their 120 to at least 470 allow one error in any build up method
	their 12 × 30 or 360 or their 12 chosen from a build up	M1dep	oe their 12 must either come from rounding down their 12.(…) or from choosing their 12 out of a build up or because they had an exact answer of their 12 from a correct method for the third mark
	their 380 – their 360 or 20 or 500 – (their 360 + their 120) or their 360 + 8 + 8 (their correct number of 8s) or 376 or their 360 + their 120 + 8 + 8 (their correct number of 8s) or 496	M1dep	their 20 must be 0 < their 20 < 30
	17 pencils, 12 rulers	A1	

8 cont	**Alternative method 2**		
	15 × 0.08 or 1.2(0)	M1	
	5 – their 1.2(0) or 3.8(0)	M1dep	
	their 3.8(0) ÷ (0).3(0) or 12(...)	M1dep	oe builds up in (0).3(0)s to at least their 3.8(0) – 30 allow one error or builds up in (0).3(0)s from their 1.2(0) to at least 4.7(0) allow one error
	their 12 × 0.3(0) or 3.6(0) or their 12 chosen from a build up	M1dep	dep on previous mark their 12 must either come from rounding down their 12.(…) or from choosing their 12 out of a build up or because they had an exact answer of their 12 from a correct method for the third mark
	their 3.8(0) – their 3.6(0) or (0).2(0) or 5 – (their 3.6(0) + their 1.2(0)) or their 3.6(0) + (0).08 + (0).08 (their correct number of (0).08s) or 3.76 or their 3.6(0) + their 1.2(0) + (0).08 + (0).08 (their correct number of (0).08s) or 4.96	M1dep	their 0.20 must be 0 < their 0.20 < 0.30
	17 pencils, 12 rulers	A1	

Additional Guidance

Do not allow mixed units in working unless recovered	
For build-up, one arithmetic mistake counts as one error, even though more than one value may be affected eg, 30, 60, 90, 130, 160, 190, 220, 250, 280, 310, 340, 370 gets 3rd mark in alternative method 1 (error from 90 to 130, but 30 then added correctly throughout)	
If there is no change possible, or change is not considered after rulers are bought, it is maximum M4	
Example 15 × 8 = 120 500 – 120 = 360 360 ÷ 30 = 12 then 12 chosen as number of rulers but no further work (4th mark awarded despite no "remainder" but 5th mark has to consider change)	M1M1M1M1M0A0

	Example 15 × 8 = 120 500 – 120 = 380	M1M1M1M1A0A0
	380 ÷ 30 = 9.2 and 9 chosen as the number of rulers (no further work)

10	$\dfrac{33}{8}$	B1	or equivalent fraction
	$4\dfrac{1}{8}$	B1ft	ft their improper fraction correctly converted to a mixed number answer only of $4\dfrac{1}{8}$ scores B1B1

<div align="center">Additional Guidance</div>

If their initial answer is a proper fraction they cannot access the second mark eg $\dfrac{3}{8}$ × 11 = $\dfrac{33}{88}$	B0B0ft
If their ft mixed number can be simplified, the simplification is not required for the second mark eg $\dfrac{3}{8}$ × 11 = $\dfrac{44}{8}$ = $5\dfrac{4}{8}$	B0B1ft
0.375 × 11 = 4.125	B1B0
33 ÷ 8	B0B0
33 ÷ 8 = $4\dfrac{1}{8}$	B1B1
$\dfrac{11}{8}=1\dfrac{3}{8}$ then $1\dfrac{3}{8}\times3=3\dfrac{9}{8}$ (this gets first B1) = $4\dfrac{1}{8}$	B1B1

	2 × their 10 or 20	M1dep	
	32 + 40 – their 20	M1dep	dep on M2
	52	A1	

Additional Guidance		
The two top sides on the triangle given values adding to 22 can be accepted as evidence of 22		
Beware of appearance of 20 for reasons that are not worth the second mark eg 10, 20, 30, 40		M1 earned at that point
Beware - wrong working can lead to the appearance of 52 (after rounding)

	$(2 + 0) \times (1 + 7) = 2^4$ or $(2 - 0) \times (1 + 7) = 2^4$ or $2 \times (0 + 1 + 7)$	B1	

Additional Guidance	
In all cases, allow extra pairs of brackets which do not alter the result of the calculation eg in 3rd calculation $\quad ((2 + 0) \times (1 + 7)) = 2^4$	B1
Brackets can be used in the place of a multiplication sign eg in 2nd calculation $\quad 2 \times 0(1 + 7) = 0$	B1
Each gap must have a bracket or an operator in	
Allow additional + or - signs in any gap, if correct eg in 1st calculation $\quad 2 + 0 + 1 + - 7 = -4$	B1

Correctly evaluated trial of at least one pair of values in one equation for which they do not work	M1	eg 9 – 2 = 7 The pair of values must not be given as the answer
Correctly evaluated trial of at least three pairs of values in one equation for which they do not work	M1dep	eg 9 – 2 = 7 2 × 11 + 5 = 27 $10 - (-2) = 12$ With none of the three pairs of values given as the answer
x = 8 and y = 2	A1	

Additional Guidance		
One correct value with one incorrect value (or no second value) and no working		M1A1A0
eg x = 6 and y = 2		M1A1A0
eg y = 2		M1A1A0
(8, 2) or 8, 2 on answer line (with or without working)		M1A1A1
(2, 8) or 2, 8 on answer line with no working		M0A0A0
Embedded, correct values in one equation only eg 2 × 8 + 2 = 18		M1A0A0
Embedded, correct values in both equations		
ie 2 × 8 + 2 = 18 and 8 – 2 = 6		M1A1A0
