Mark Scheme

7516
June 2016

Version 1.1: Final

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Assessment Writer.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from aqa.org.uk

AS Computer Science

Paper 1 (7516/1 – applicable to all programming languages A, B C, D and E)

June 2016

The following annotation is used in the mark scheme:

- ;** - means a single mark
- //** - means alternative response
- /** - means an alternative word or sub-phrase
- A** - means acceptable creditworthy answer
- R** - means reject answer as not creditworthy
- NE** - means not enough
- I** - means ignore
- DPT** - means "Don't penalise twice". In some questions a specific error made by a candidate, if repeated, could result in the loss of more than one mark. The **DPT** label indicates that this mistake should only result in a candidate losing one mark, on the first occasion that the error is made. Provided that the answer remains understandable, subsequent marks should be awarded as if the error was not being repeated.

Pages 2 to 19 contain the generic mark scheme.

Pages 20 to 37 contain the 'Program Source Codes' specific to the programming languages for questions 5.1, 9.1, 10.1, 10.2 and 11.1;

- pages 20 to 22 – VB.NET
- pages 23 to 25 – PASCAL/Delphi
- pages 26 to 29 – C#
- pages 30 to 32 – JAVA
- pages 33 to 35 – PYTHON 2
- pages 36 to 37 – PYTHON 3

Level of response marking instructions

Level of response mark schemes are broken down into levels, each of which has a descriptor. The descriptor for the level shows the average performance for the level. There are marks in each level.

Before you apply the mark scheme to a student's answer read through the answer and annotate it (as instructed) to show the qualities that are being looked for. You can then apply the mark scheme.

Step 1 Determine a level

Start at the lowest level of the mark scheme and use it as a ladder to see whether the answer meets the descriptor for that level. The descriptor for the level indicates the different qualities that might be seen in the student's answer for that level. If it meets the lowest level then go to the next one and decide if it meets this level, and so on, until you have a match between the level descriptor and the answer. With practice and familiarity you will find that for better answers you will be able to quickly skip through the lower levels of the mark scheme.

When assigning a level you should look at the overall quality of the answer and not look to pick holes in small and specific parts of the answer where the student has not performed quite as well as the rest. If the answer covers different aspects of different levels of the mark scheme you should use a best fit approach for defining the level and then use the variability of the response to help decide the mark within the level, ie if the response is predominantly level 3 with a small amount of level 4 material it would be placed in level 3 but be awarded a mark near the top of the level because of the level 4 content.

Step 2 Determine a mark

Once you have assigned a level you need to decide on the mark. The descriptors on how to allocate marks can help with this. The exemplar materials used during standardisation will help. There will be an answer in the standardising materials which will correspond with each level of the mark scheme. This answer will have been awarded a mark by the Lead Examiner. You can compare the student's answer with the example to determine if it is the same standard, better or worse than the example. You can then use this to allocate a mark for the answer based on the Lead Examiner's mark on the example.

You may well need to read back through the answer as you apply the mark scheme to clarify points and assure yourself that the level and the mark are appropriate.

Indicative content in the mark scheme is provided as a guide for examiners. It is not intended to be exhaustive and you must credit other valid points. Students do not have to cover all of the points mentioned in the Indicative content to reach the highest level of the mark scheme.

An answer which contains nothing of relevance to the question must be awarded no marks.

Examiners are required to assign each of the candidates' responses to the most appropriate level according to **its overall quality**, then allocate a single mark within the level. When deciding upon a mark in a level examiners should bear in mind the relative weightings of the assessment objectives

eg

In question **10.1**, the marks available for the AO3 elements are as follows:

AO3 (design) – 2 marks

AO3 (programming) – 6 marks

In question **11.1** the marks available for the AO3 elements are as follows:

AO3 (design) – 2 marks

AO3 (knowledge) – 10 marks.

Where a candidate's answer only reflects one element of the AO, the maximum mark they can receive will be restricted accordingly.

01	1	Mark is for AO2 (apply) B;	1
01	2	Mark is for AO2 (apply) C;	1

02	1	All marks AO2 (apply) <table border="1" style="margin: 10px auto;"> <thead> <tr> <th>Input string</th> <th>Accepted by FSM?</th> </tr> </thead> <tbody> <tr> <td>111011x</td> <td>NO</td> </tr> <tr> <td>1110x</td> <td>YES</td> </tr> <tr> <td>111001x</td> <td>NO</td> </tr> </tbody> </table> <p>Mark as follows: 1 mark: one row correct 2 marks: all rows correct</p>	Input string	Accepted by FSM?	111011x	NO	1110x	YES	111001x	NO	2
Input string	Accepted by FSM?										
111011x	NO										
1110x	YES										
111001x	NO										
02	2	All marks AO2 (apply) <p>Strings that start with zero or more 1s; A. starts with any number of 1s as BOD which may or may not be followed by a 0; A. there can be at most one 0 in the string and end with an x; A. 'end' being by implication</p> <p>NOTE: 'ending with either x or 0x' is worth two marks</p> <p>NOTE: MAX 2 if answer is not fully correct</p>	3								

03		All marks AO3 (evaluate) <table border="1" style="margin: 10px auto;"> <thead> <tr> <th>Value for x</th> <th>Type of test data</th> </tr> </thead> <tbody> <tr> <td>25</td> <td>Valid / normal / typical A. expected / acceptable</td> </tr> <tr> <td>1</td> <td>Boundary / extreme</td> </tr> <tr> <td>-8</td> <td>Invalid / erroneous</td> </tr> </tbody> </table> <p>Mark as follows: 1 mark: one row completed correctly in the table 2 marks: three rows completed correctly in the table</p>	Value for x	Type of test data	25	Valid / normal / typical A. expected / acceptable	1	Boundary / extreme	-8	Invalid / erroneous	2
Value for x	Type of test data										
25	Valid / normal / typical A. expected / acceptable										
1	Boundary / extreme										
-8	Invalid / erroneous										

04	1	<p>All marks AO2 (apply)</p> <table border="1" data-bbox="293 297 1374 936"> <thead> <tr> <th rowspan="2">ItemsCount</th> <th rowspan="2">NewItemsCount</th> <th rowspan="2">LoopA</th> <th rowspan="2">Done</th> <th rowspan="2">LoopB</th> <th colspan="4">NewItems</th> </tr> <tr> <th>[0]</th> <th>[1]</th> <th>[2]</th> <th>[3]</th> </tr> </thead> <tbody> <tr> <td>4</td> <td>1</td> <td></td> <td></td> <td></td> <td>12</td> <td>0</td> <td>0</td> <td>0</td> </tr> <tr> <td></td> <td>2</td> <td>1</td> <td>False</td> <td>0</td> <td></td> <td>25</td> <td></td> <td></td> </tr> <tr> <td></td> <td></td> <td>2</td> <td>False</td> <td>0</td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td></td> <td></td> <td></td> <td>True</td> <td>1</td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td></td> <td></td> <td>3</td> <td>False</td> <td>0</td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td></td> <td>3</td> <td></td> <td></td> <td>1</td> <td></td> <td></td> <td>53</td> <td></td> </tr> <tr> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> </tbody> </table> <p>1. This modification may not be in exactly the right place and the value to change the structure by may be incorrect, but it should be possible to see that it was intended to be linked to a particular ship. To award two marks instead of one, some of the code must be syntactically correct. There is insufficient evidence to suggest that a line of reasoning has been followed or that the solution has been designed.</td> <td style="text-align: center;">1-2</td> </tr> </tbody> </table>				Level	Description	Mark Range	4	A line of reasoning has been followed to arrive at a logically structured working or almost fully working programmed solution. The <code>Ships</code> data structure is modified correctly for each hit. The sunk message is displayed at the appropriate time. To award eight marks, the code must perform exactly as required in the question. It is evident from the program code that the code has been designed appropriately to ensure that the task is achieved.	7-8	3	There is evidence that a line of reasoning has been followed to produce a logically structured subroutine that works correctly in most cases but with some omissions (e.g. the <code>Ships</code> data structure is modified incorrectly or the message that is displayed may not match the question). It is evident from the program code that it has been designed appropriately to ensure that the task is mainly achieved.	5-6	2	There is evidence that a line of reasoning has been partially followed as the <code>Ships</code> data structure is modified (though possibly incorrectly). The correct message might not be displayed. There is little or no evidence that a line of reasoning has been followed to award a mark for the design of the solution.	3-4	1	An attempt to modify the <code>Ships</code> data structure. This modification may not be in exactly the right place and the value to change the structure by may be incorrect, but it should be possible to see that it was intended to be linked to a particular ship. To award two marks instead of one, some of the code must be syntactically correct. There is insufficient evidence to suggest that a line of reasoning has been followed or that the solution has been designed.	1-2
Level	Description	Mark Range																
4	A line of reasoning has been followed to arrive at a logically structured working or almost fully working programmed solution. The <code>Ships</code> data structure is modified correctly for each hit. The sunk message is displayed at the appropriate time. To award eight marks, the code must perform exactly as required in the question. It is evident from the program code that the code has been designed appropriately to ensure that the task is achieved.	7-8																
3	There is evidence that a line of reasoning has been followed to produce a logically structured subroutine that works correctly in most cases but with some omissions (e.g. the <code>Ships</code> data structure is modified incorrectly or the message that is displayed may not match the question). It is evident from the program code that it has been designed appropriately to ensure that the task is mainly achieved.	5-6																
2	There is evidence that a line of reasoning has been partially followed as the <code>Ships</code> data structure is modified (though possibly incorrectly). The correct message might not be displayed. There is little or no evidence that a line of reasoning has been followed to award a mark for the design of the solution.	3-4																
1	An attempt to modify the <code>Ships</code> data structure. This modification may not be in exactly the right place and the value to change the structure by may be incorrect, but it should be possible to see that it was intended to be linked to a particular ship. To award two marks instead of one, some of the code must be syntactically correct. There is insufficient evidence to suggest that a line of reasoning has been followed or that the solution has been designed.	1-2																

Guidance**Evidence of AO3 (design) - 2 points:**

1. designing a suitable interface for the `CheckSunk` subroutine with suitable parameters and return values;

Suitable parameters could be `board`, `ships`, `row`, `column` OR `ships` and the character from `board[row, column]`;

JAVA: `rowColumn` could be passed rather than `row` and `column`

2. identifying suitable structures so that every ship can be checked (e.g. loop or 5 `IF` statements);

Note that AO3 (design) points are for selecting appropriate techniques to use to solve the problem, so should be credited whether the syntax of programming language statements is correct or not and regardless of whether the solution works.

Evidence of AO3 (programming) - 6 points:

3. `CheckSunk` subroutine created with begin and end of subroutine;
4. Use the letter stored in the square that has been hit;
ie use of `board[row][column]` and set to a variable or used with a comparison to a ship name first character
5. Compare the letter from the square (4.) with the first letter of the type of ship ;
ie either via direct characters such as 'A','P' or using something similar to `ships[][][0]`
R. if would only work for 2 or fewer ships
6. Take one away from the size of the ship identified as being hit;
R. if would only work for 2 or fewer ships
7. Selection statements to compare size of the hit ship against 0;
R. if would only work for 2 or fewer ships
8. Correct message (type of ship followed by 'is sunk!') is displayed under the correct circumstances for **all** ships;
NOTE: For the 'sunk' message look to make sure it is only being outputted at the time of sinking
 - I. Case of output message
 - A. Minor typos in output message
 - I. Spacing in output message

Note that AO3 (programming) points are for programming and so should only be awarded for syntactically correct code.

NOTE: Code could be written as a function or procedure - either would be acceptable.

10	2	<p>Mark is for AO3 (programming)</p> <p>1 mark: Call to <code>CheckSunk</code> is in the correct position in the <code>MakePlayerMove</code> subroutine (must be before setting the board cell to 'h');</p> <p>A. if they have declared a variable to temporarily store the current <code>board[row][column]</code> ship character and passed this before or after setting board cell to 'h'</p>	1

Level	Description	Mark Range																
4	<p>A line of reasoning has been followed to arrive at a logically structured working or almost fully working programmed solution that is efficient. Code is written to ensure only one torpedo can be fired during a game and offers the user a chance to fire a torpedo if appropriate. When a torpedo is fired it moves correctly. Appropriate messages are displayed. A formal interface is used to pass at least some of the required data into and out of the <code>MakePlayerTorpedoMove</code> subroutine. All of the appropriate design decisions have been taken.</p>	10-12																
3	<p>There is evidence that a line of reasoning has been followed. The <code>PlayGame</code> subroutine has been altered to allow the user to fire a torpedo.</p> <p>The <code>MakePlayerTorpedoMove</code> subroutine uses a logically structured subroutine that works correctly in most cases. A formal subroutine interface may or may not have been used. The solution demonstrates good design work as most of the correct design decisions have been taken.</p>	7-9																
2	<p>The <code>PlayGame</code> subroutine has been adapted but it might not ensure that the player can only fire one torpedo. A <code>MakePlayerTorpedoMove</code> subroutine structure has been created and there may be some appropriate, syntactically correct programming language statements written. There is evidence that a line of reasoning has been partially followed for <code>PlayGame</code> and/or <code>MakePlayerTorpedoMove</code> as although there may not be all of the required functionality, it can be seen that the response contains some of the statements that would be needed in a working solution. There is evidence of some appropriate design work as the response recognises at least one appropriate technique that could be used by a working solution, regardless of whether this has been implemented correctly.</p>	4-6																
1	<p>An attempt has been made to alter the <code>PlayGame</code> subroutine and/or a subroutine has been created and some appropriate programming language statements have been written but there is no evidence that a line of reasoning has been followed to arrive at a working solution. The statements written may or may not be syntactically correct and the subroutine will have very little or none of the required functionality. It is unlikely that any of the key design elements of the task have been recognised.</p>	1-3																

AO3 (design) - 2 marks:

1. Identification of the need for a variable to hold whether a torpedo has been fired or not;
2. Use of an iteration structure to control the moving of the torpedo;

AO3 (programming) - 10 marks:**PlayGame**

3. Logic to determine whether a torpedo can be fired is correct and is in an appropriate place in the `PlayGame` subroutine;
4. Correct prompt 'Fire a torpedo? (Y/N)' is displayed;

I. Case of output message**A. Minor typos in output message****I. Spacing in output message**

5. Selection statement coded to handle a torpedo shot or a normal shot calling the relevant subroutine and code is in appropriate place in the `PlayGame` subroutine;

6. Variable is correctly updated to reflect the fact that a torpedo has been fired;

MakePlayerTorpedoMove

7. A suitable interface for the `MakePlayerTorpedoMove` subroutine with suitable parameters (`board` and possibly `ships`) and return value
8. Code correctly exits iteration when torpedo moves off board and torpedo hits a ship
9. Code will move torpedo up board
10. Code correctly determines when torpedo has hit a ship updating board to 'h' (when necessary)
11. If current board position is empty cell '-' is updated to contain an 'm' and code behaves correctly for cell already containing an 'm'.
12. Messages produced appropriately and displayed under correct conditions when the torpedo misses (moves off the board) and hits a ship.

NOTE: `MakePlayerTorpedoMove` could be written as a procedure or function - either would be acceptable

NOTE: A call to `CheckSunk` is not necessary for full marks

11	2	<p>All marks for AO3 (evaluate)</p> <p>****SCREEN CAPTURE****</p> <p><i>Must match code from 11.1, including prompts on screen capture matching those in code. Code for 11.1 must be sensible.</i></p> <p>MAIN MENU</p> <p>1. Start new game 2. Load training game 9. Quit</p> <p>Please enter your choice: 2</p> <p>The board looks like this:</p> <pre> 0 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 </pre> <p>Fire a torpedo(Y/N)? Y</p> <p>Please enter column: 1 Please enter row: 7</p> <p>Torpedo hits at (1,5)</p> <p>The board looks like this:</p> <pre> 0 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 h 6 m 7 m 8 9 </pre>	2
----	---	--	---

Please enter column: 2

Please enter row: 1

Sorry, (2,1) is a miss.

The board looks like this:

	0	1	2	3	4	5	6	7	8	9
0										
1			m							
2										
3										
4										
5		h								
6		m								
7		m								
8										
9										

Mark as follows

1 mark: Screenshots show player is asked if they want to place a torpedo and then the 'Fire a torpedo?' prompt is not shown for the second shot;

1 mark: Screenshots show the torpedo moves correctly from (1,7) to (1,5) and causes a hit;

NOTE: Do not penalise extra screenshots showing the torpedo moving up square by square
