Mark scheme

June 2018

Version/Stage: 1.0 Final

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Assessment Writer.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from aqa.org.uk

Question	Guidance	Mark
01.1	Determine the area of one plate in both m² and mm² Area of trapezium in m² $A = \left(\frac{0.55 + 1.15}{2} \right) 0.75 = 637.5 \times 10^{-3} \text{m}^2$ Area of trapezium in mm² $A = \left(\frac{550 + 1150}{2} \right) 750 = 637.5 \times 10^3 \text{mm}^2$ 1 mark using for the correct values in m. 1 mark for the correct answer in m² (or other suitable method). 1 mark for using the correct values in mm. 1 mark for the correct answer in mm² Maximum 4 marks	4

01.2	Each plate was initially cut from a rectangular sheet of dimensions 1150 mm × 750 mm. Calculate the percentage of waste material for each finished plate in terms of its area. Answer to the nearest whole percentage. $\tan(90^\circ - 62^\circ) \times 750 \text{ mm} = 398.7820... \text{ mm}$ $1150 \text{ mm} - 398.7820... \text{ mm} - 550 \text{ mm} = 201.2179... \text{ mm}$ Area of triangle 1 $\frac{1}{2} \times 398.7820... \times 750 = 149.5432... \times 10^3 \text{ mm}^2$ Area of triangle 2 $\frac{1}{2} \times 201.2179... \times 750 = 75.4567... \times 10^3 \text{ mm}^2$ Total area of rectangle $1150 \times 750 = 862.5 \times 10^3 \text{ mm}^2$ Total area of trapezium $A_t = 862.5 \times 10^3 \text{ mm}^2 - 149.5432... \times 10^3 \text{ mm}^2 - 75.4567... \times 10^3 \text{ mm}^2$ $= 637.5 \times 10^3 \text{ mm}^2$ Percentage waste material $\left(1 - \left(\frac{637.5 \times 10^3 \text{ mm}^2}{862.5 \times 10^3 \text{ mm}^2} \right) \right) \times 100\% = 26\%$ Or other suitable methods will do. 1 mark each for determining the lengths of each triangle's baseline. 1 mark each for determining each triangles area. 1 mark for the calculation of the rectangles area. 1 mark for calculation of the percentage of waste material. 1 mark for nearest whole number. Maximum 7 marks	7
Total marks for Question 1		11

Question	Guidance	Mark
02.1	Determine the values for a and b when: $F = 100$, when $L = 70$ and $F = 80$ when $L = 50$ $100 = 70a + b$ (1) and $80 = 50a + b$ (2) From equation (2) we have: $b = 80 - 50a$ (3) Now, substitute equation (3) into equation (1) $100 = 70a + 80 - 50a \therefore 20 = 20a$ and $a = 1$ Now, from equation (2) substitute in for a $80 = (50)(1) + b \therefore b = 30$ 2 marks for setting up both simultaneous equations. 1 mark for writing one of the constants in terms of the other. 1 mark for substituting into one of the original equations. 1 mark for finding the value of one of the constants. 1 mark for substituting this value into one of the original equations. 1 mark for finding the last value. Maximum 7 marks	7
02.2	Confirm your values for a and b by plotting a graph on Figure 2 where a and b are values to be determined. 1 mark for the line's start point – the vertical intercept at 30 1 mark for each equation and recognising these are straight lines. 1 mark for each horizontal line at 100 and 80 respectively. 1 mark for the vertical line at $a = 100$ Maximum 6 marks	6
Total marks for Question 2		13

Question	Guidance	Mark
03	Determine the resultant velocity vector for the new autonomous robot by finding the resultant sum of the three velocity vectors of the old robots. Draw a diagram of the resultant vector. $\rightarrow 17\cos 25^\circ + 22\cos 90^\circ - 11\cos 15^\circ = 4.7820\dots \text{m s}^{-1}$ $\uparrow 17\sin 25^\circ + 22\sin 90^\circ - 11\sin 15^\circ = 26.3375\dots \text{m s}^{-1}$ Magnitude = $\sqrt{(\rightarrow^2 + \uparrow^2)} = 26.8 \text{ m s}^{-1}$ $\theta = \tan^{-1}\left(\frac{\uparrow}{\rightarrow}\right) = 79.7^\circ$ to the horizontal  1 mark for recognising cosine ratio on the horizontal component. 1 mark for the correct horizontal component value. 1 mark for recognising the sine ratio on the vertical component. 1 mark for the correct vertical component value. 1 mark for the correct method for calculating the magnitude. 1 mark for the correct value of the magnitude. 1 mark for the correct method of calculating the angle. 1 mark for the correct value of the angle. 2 marks for drawing the correct resultant vector. Maximum 10 marks	10
Total marks for Question 3		10

Question	Guidance	Mark																				
04.1	Determine the mean length of the sample. The mean length of the sample can be determined by $\bar{L} = \frac{\sum L}{n} = \frac{12.5+12.2+12.7+12.9+11.9+12.5+12.6+12.5+11.9+12.8+11.9+12.0+12.7+12.7+12.5+12.6+12.4+11.9+12.0+12.1}{20}$ Therefore, we have $\bar{L} = \frac{247.3}{20} = 12.4 \text{ mm}$ 1 mark for using the correct method. 1 mark for using the correct values. 1 mark for the correct answer. Maximum 3 marks	3																				
04.2	Determine the median length of the sample. The median of the sample can be calculated. <table><tr><td>11.9</td><td>11.9</td><td>11.9</td><td>11.9</td><td>12.0</td><td>12.0</td><td>12.1</td><td>12.2</td><td>12.4</td><td>12.5</td></tr><tr><td>12.5</td><td>12.5</td><td>12.5</td><td>12.6</td><td>12.6</td><td>12.7</td><td>12.7</td><td>12.7</td><td>12.8</td><td>12.9</td></tr></table> Therefore, the median value is calculated by $\frac{12.5+12.5}{2} = 12.5$ 1 mark for the correct value. Maximum 1 mark	11.9	11.9	11.9	11.9	12.0	12.0	12.1	12.2	12.4	12.5	12.5	12.5	12.5	12.6	12.6	12.7	12.7	12.7	12.8	12.9	1
11.9	11.9	11.9	11.9	12.0	12.0	12.1	12.2	12.4	12.5													
12.5	12.5	12.5	12.6	12.6	12.7	12.7	12.7	12.8	12.9													

04.3	Determine the standard deviation of the sample. The standard deviation of the sample can be found by using $\sigma = \sqrt{\frac{\sum(L-\bar{L})^2}{n}}$ Therefore, we have $\frac{\sum(L - \bar{L})^2}{20} =$ $\begin{aligned} & ((12.5 - 12.365)^2 + (12.2 - 12.365)^2 + (12.7 - 12.365)^2 + (12.9 - 12.365)^2 + (11.9 - 12.365)^2 + (12.5 - 12.365)^2 \\ & + (12.6 - 12.365)^2 + (12.5 - 12.365)^2 + (11.9 - 12.365)^2 + (12.8 - 12.365)^2 + (11.9 - 12.365)^2 \\ & + (12.0 - 12.365)^2 + (12.7 - 12.365)^2 + (12.7 - 12.365)^2 + (12.5 - 12.365)^2 + (12.6 - 12.365)^2 \\ & + (12.4 - 12.365)^2 + (11.9 - 12.365)^2 + (12.0 - 12.365)^2 + (12.1 - 12.365)^2) / 20 = 0.111275 \end{aligned}$ $\sigma = \sqrt{\text{variance}} = \sqrt{0.111275} = 0.334 \text{ mm}$ 1 mark for the correct formula. 1 mark for correct use of mean. 1 mark for correct values in the formula. 1 mark for the correct answer. Maximum 4 marks Allow follow-through from Question 04.1.	4
Total marks for Question 4		8

Question	Guidance	Mark
05	Calculate the value of the definite integral. $\int_0^{\pi/2} -3\sin(2\theta).d\theta$ $-3\sin(2\theta) = \left[\frac{3}{2}\cos(2\theta)\right]_0^{\pi/2}$ $\int_0^{\pi/2} = \left(\frac{3}{2}\cos\left(2 \times \frac{\pi}{2}\right)\right) - \left(\frac{3}{2}\cos(2 \times 0)\right)$ $= -\frac{3}{2} - \frac{3}{2} = -3 \text{ square units.}$ 1 mark for use of square brackets. 1 mark for “-” × “-” becoming “+”. 1 mark for cos. 1 mark $\frac{3}{2}$ 1 mark for subtracting lower limit from higher limit. 1 mark for first part of the sum. 1 mark for the final answer. 1 mark for correct units. Maximum 8 marks	8
Total marks for Question 5		8

Question	Guidance	Mark
06	Calculate the three angles in degrees of the triangle. Give your answer to 1 decimal place. Using any form of the cosine rule to determine any angle: $b^2 = a^2 + c^2 - 2ac \cos B$ Transpose to determine angle B: $\cos B = \frac{a^2 + c^2 - b^2}{2ac} = \frac{6^2 + 8^2 - 12^2}{2 \times 6 \times 8} = -0.4583...$ Therefore $B = 117.2796...^\circ$ Either of the cosine or sine rules can now be used, allow marks for either method. This solution uses the sine rule as an exemplar: $\frac{a}{\sin A} = \frac{b}{\sin B} \therefore \sin A = \frac{a \sin B}{b} = \frac{8 \sin 117.2796...^\circ}{12} = 0.4443...^\circ$ Now $A = 36.3360...^\circ$ The final angle can be found using: $C = 180^\circ - A - B = 180^\circ - 36.3360...^\circ - 117.2796...^\circ = 26.3843...^\circ$ Therefore, we have: $A = 36.3^\circ$ $B = 117.3^\circ$ $C = 26.4^\circ$ All to 1 dp as required. 1 mark use of cosine rule. 3 marks for the transposition. 1 mark for the correct angle value. 1 mark for use of the sine rule / cosine rule (depending on the student preference). 1 mark for correct transposition. 1 mark for correct solution. 1 mark for the final angle value. 1 mark for correct decimal places. Maximum 10 marks	10
Total marks for Question 6		10

Question	Guidance	Mark
07.1	Determine the value for of the cooling constant k. $T_2 = T_0 + (T_1 - T_0)e^{-kt}$ $T_2 - T_0 = (T_1 - T_0)e^{-kt}$ $e^{-kt} = \frac{T_2 - T_0}{T_1 - T_0}$ Now, apply $\ln$ to both sides: $-kt = \ln\left(\frac{T_2 - T_0}{T_1 - T_0}\right)$ Then: $k = -\frac{1}{t} \ln\left(\frac{T_2 - T_0}{T_1 - T_0}\right)$ Put in the values: $k = -\frac{1}{10} \ln\left(\frac{329.7 - 280.0}{1280.0 - 280.0}\right) = 0.300 \text{ s}^{-1}$ 1 mark for each step in the transposition – total 5 marks. 1 mark for use of the correct values. 1 mark for the correct answer. Maximum 7 marks	7
07.2	The bar has initial temperature of 1280 K and it is immersed in chilled water at a temperature of 280.0 K. Find the expected temperature of the bar after 5 seconds. Use the formula $T_2 = T_0 + (T_1 - T_0)e^{-kt}$ Input the known values: $T_2 = 280.0 + (1280.0 - 280.0)e^{-0.3 \times 5}$ $T_2 = 280.0 + 223.1301\dots$ $T_2 = 503 \text{ K}$ 1 mark for correct use of values. 1 mark for correct answer. 1 mark for correctly answering to the nearest whole number. Maximum 3 marks	3
Total marks for Question 7		10

07.2	The bar has initial temperature of 128.0 K and it is immersed in chilled water at a temperature of 280.0 K. Find the expected temperature of the bar after 5 seconds. Use the formula $T_2 = T_0 + (T_1 - T_0)e^{-k t}$ Input the known values: $T_2 = 280.0 + (128.0 - 280.0)e^{-0.3 \times 5}$ $T_2 = 280.0 - 33.9157...$ $T_2 = 246 \text{ K}$ 1 mark for correct use of values. 1 mark for correct answer. 1 mark for correctly answering to the nearest whole number. Maximum 3 marks <u>Accept either solution due to the misprint / typo on the exam paper.</u>	3

Question	Guidance	Mark
08.1	Calculate the change in potential energy of the truck after this climb. Slope = 10% = $\frac{10}{100}$ Therefore, we have: $\theta = \tan^{-1}\left(\frac{10}{100}\right) = 5.7105\dots^\circ$ To find the height (h): $\sin \theta = \frac{\text{opp (h)}}{\text{hyp}} \therefore h = \sin \theta \times 125 = 12.4379\dots\text{m}$ The potential energy is calculated by: $\text{PE} = mgh = 40\,000 \times 9.81 \times 12.4379\dots = 4.8806\dots\text{Mj}$ Better as: 4.88 Mj to 3 sig. fig. 1 mark for recognition of a 10% slope. 1 mark for recognising the tangent ratio. 1 mark for correct angle calculation. 1 mark for use of the sine ratio. 1 mark for the correct transposition. 1 mark for the correct height. 1 mark for the correct value of the potential energy. Maximum 7 marks	7
08.2	If the truck was allowed to free-wheel back down the slope from rest what would be its velocity? Assume there is no resistance to the motion. $\text{KE} = \frac{1}{2}mv^2 \therefore v = \sqrt{\frac{2\text{ PE}}{m}} = \sqrt{\frac{2 \times 4.8806\dots}{40000}} = 15.6215\dots\text{m s}^{-1}$ Better as: $v = 15.6\text{ m s}^{-1}$ The student could use the conservation of energy formula and calculate the value. Allow this method also. $mgh = \frac{1}{2}mv^2 \therefore v = \sqrt{2gh} = \sqrt{2 \times 9.81 \times 12.4379\dots} = 15.6215\dots\text{m s}^{-1}$ Better as: $v = 15.6\text{ m s}^{-1}$ 1 mark for the transposition. 1 mark for the values. 1 mark for the final answer to 3 sig. fig. Maximum 3 marks	3
