This document has **4** pages.

Exclusive Pottery (EP)

EP is a private limited company set up 40 years ago in country Y. It manufactures pottery products including plates, cups and bowls. EP has a reputation for producing high-quality products. The Managing Director is considering the best way to increase the added value of EP's products by either increasing prices or reducing raw material costs. Raw materials are currently purchased locally as imported raw materials are of a lower quality.

EP operates in a very competitive market. Many of EP's competitors sell lower-quality products at lower prices. There are many substitutes for pottery products, including products made from plastic or bamboo. Consumer spending patterns have been changing in country Y and this has affected EP's sales.

EP currently advertises its pottery in newspapers and magazines. EP does not have a website and only sells its products to retail shops in country Y. EP needs a new Marketing Manager and the Managing Director thinks EP should employ someone from outside the business. The new Marketing Manager will need to consider which of the following three ways EP could use to increase sales:

- Advertising using social media
- Emailing special offers to existing customers
- Setting up a website

The Managing Director wants to increase efficiency in the factory. She is considering either improving labour skills or introducing more automation and technology. Both methods will need additional finance. The Managing Director will consider different factors before choosing which source of finance to use.

Appendix 1

Advertisement for EP

We sell a wide range of plates, cups and bowls which are sold in all good retailers.

EP's products are all high quality and made using materials from local suppliers.

Appendix 2

Organisational chart for EP

Total employees = 84

Appendix 3

Email from Managing Director to Operations Director

To: Operations Director

Date: 5 March 2024

Re: Which product to stop making

We need to keep our costs low and therefore I suggest we stop making either Product A or Product B. I have included some data in the table below to help us make the decision.

Demand is forecast to increase in 2024 for both products. Total costs are expected to remain unchanged.

Let me know which product you would choose to stop making and why.

Financial information for Product A and Product B for 2023		
	Product A	Product B
Price per unit	\$10	\$40
Sales volume	20 000 units	10 000 units
Total cost	\$140 000	\$350 000
Profit	\$60 000	\$50 000
Gross profit margin	50%	62.5%
Forecast increase in demand in 2024	10%	20%
