

GCE Advanced Subsidiary Level and GCE Advanced Level

MARK SCHEME for the November 2003 question papers

9702 PHYSICS
Paper 1 (Multiple Choice (AS)), maximum mark 40
Paper 2 (Structured Questions (AS)), maximum mark 60
Paper 3 (Practical (AS)), maximum mark 25
Paper 4 (Structured Questions (A2 Core)), maximum mark 60
Paper 5 (Practical (A2)), maximum mark 30
Paper 6 (Options (A2)), maximum mark 40

These mark schemes are published as an aid to teachers and students, to indicate the requirements of the examination. They show the basis on which Examiners were initially instructed to award marks. They do not indicate the details of the discussions that took place at an Examiners' meeting before marking began. Any substantial changes to the mark scheme that arose from these discussions will be recorded in the published *Report on the Examination*.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the *Report on the Examination*.

• CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the November 2003 question papers for most IGCSE and GCE Advanced Level syllabuses.

Categorisation of marks

The marking scheme categorises marks on the MACB scheme.

B marks: These are awarded as <u>independent</u> marks, which do not depend on other marks. For a B-mark to be scored, the point to which it refers must be seen specifically in the candidate's answer.

M marks: These are <u>method</u> marks upon which A-marks (accuracy marks) later depend. For an M-mark to be scored, the point to which it refers must be seen in the candidate's answer. If a candidate fails to score a particular M-mark, then none of the dependent A-marks can be scored.

C marks: These are <u>compensatory</u> method marks which can be scored even if the points to which they refer are not written down by the candidate, providing subsequent working gives evidence that they must have known it. For example, if an equation carries a C-mark and the candidate does not write down the actual equation but does correct working which shows he/she knew the equation, then the C-mark is awarded.

A marks: These are accuracy or <u>answer</u> marks which either depend on an M-mark, or allow a C-mark to be scored.

Conventions within the marking scheme

BRACKETS

Where brackets are shown in the marking scheme, the candidate is not required to give the bracketed information in order to earn the available marks.

UNDERLINING

In the marking scheme, underlining indicates information that is essential for marks to be awarded.

MARK SCHEME

MAXIMUM MARK: 30

SYLLABUS/COMPONENT: 9702/05

PHYSICS Paper 5 (Practical (A2))

			vtropo	nore com
Page 1	Mark Scheme	Syllabus	Paper	pers.com
	A/AS LEVEL EXAMINATIONS - NOVEMBER 2003	9702	05	

Question 1

(b)	Temperature of ice/water mixture (-1 to +2°C; ignore unit and sf)	1
(d1)	Readings 6 values of ln / scores one mark. Allow more than 6 sets without penalty. Write the number of readings as a ringed total by the table. Choose a row in the table. Check a value for ln(//A). Tick if correct and score one mark. If incorrect, write in correct value and do not award the mark. Ignore small rounding errors. No help from Supervisor scores one mark. Minor help zero. Major help –1. If help has been given then write SR at the top of the front page of the script, and give a brief explanation of the type of help that has been given by the table of results.	3/2/1/0
(d ₂)	Quality of results Judge by scatter of points about the line of best fit. 6 trend scores 2 marks; 5 trend scores one mark; no trend scores zero. Allow very shallow curve. If an incorrect graph has been plotted these marks cannot be awarded. Allow quality marks if the negative signs of ln <i>I</i> have been omitted.	2
(d ₃)	Column headings Each column heading must contain a quantity and a unit. There must be some distinguishing feature between the quantity and the unit. Ignore unit with column heading for In <i>I</i> .	1
(d ₄)	Consistency of raw readings All the raw readings of <i>V</i> should be given to the same number of d.p. All the raw readings of <i>I</i> should be given to the same number of d.p. One mark each. Do not allow 'added zeros'.	2
(e ₁)	Axes The axes must be labelled with ln <i>I</i> and <i>V</i> . Ignore units on the axes. The plotted points must occupy at least half the graph grid in both the <i>x</i> and <i>y</i> directions (i.e. 4 large squares in the <i>x</i> -direction and 6 large squares in the <i>y</i> -direct Do not allow more than 3 large squares between the labels on an axis. Do not allow awkward scales (e.g. 3:10, 6:10 etc.).	1 ction).

			wiropo.	nore com
Page 2	Mark Scheme	Syllabus	Paper	pers.com
	A/AS LEVEL EXAMINATIONS - NOVEMBER 2003	9702	05	

(e ₂)	Plotting of points All the observations must be plotted. Count the number of plots and ring this total on the grid. Do not allow plots in the margin area. Check one suspect plot. Circle this plot. Tick if correct. If incorrect, mark the correct position with a small cross and use an arrow to indicate where the plot should have been, and do not award the mark. Allow errors up to and including half a small square.	1
(e ₃)	Line of best fit Only a drawn straight line through a linear trend is allowable for this mark. This mark can only be awarded for 5 or more plots on the grid. There must be a reasonable balance of points about the drawn line. Do not allow a line of thickness greater than half a small square. Allow this mark if the trend of plots is a very shallow curve.	1
(e ₄)	Gradient Ignore any units given with the value. Hypotenuse of Δ must be > half the length of line drawn. Check the read-offs. Work to half a small square. $\Delta x/\Delta y$ gets zero. Values taken from the table that lie on the line to within half a small square are acceptable.	1
(e ₅)	<i>y</i> -intercept The value may be read from the <i>y</i> -axis or calculated from a point on the line using $y = mx + c$.	1
(f ₁)	<i>e/kT</i> = gradient Can be implied in the working.	1
(f ₂)	Value for <i>e</i> A numerical value is expected. Method of working must be correct. 1.6 x 10^{-19} C with no working scores zero. Gradient and kelvin must be used and the value of <i>e</i> must be x 10^{-19} or x 10^{-20} .	1
(f ₃)	Value for I _O Working must be checked (i.e. I _o = e ^{y-intercept})	1
(f ₄)	Units of both correct e and I_o (i.e. a unit of charge and a unit of current)	1
(f₅)	SF in e Allow 2 of 3 sf only	1
(g)	Correct working to give <i>I</i> when $V = 1.0$ V and $T = 373$ K Method of working must be correct. Ignore unit and sf. Do not allow gradient value to be substituted.	1
~~		

20 marks in total.

Page 3	Mark Scheme	Syllabus	Paper	pers.com
	A/AS LEVEL EXAMINATIONS - NOVEMBER 2003	9702	05	

Question 2

A1	Procedure OK (i.e. find $m_{\rm B}$ and ${\rm acc}^{\rm n}$ of A or B; <u>change</u> $m_{\rm B}$ and repeat). An experiment must have been described for this mark to be awarded. This mark can be scored even if the method is unworkable.	1
A2	Diagram of <u>workable</u> arrangement to find acceleration (e.g. object falls between two markers/light gates/smart pulley at top) If the diagram is not very detailed refer to text.	1
A3	Measurement of mass $m_{\rm B}$ (e.g. using balance/Newton meter/calibrations on masses)	1
B1	<u>Valid method</u> of measuring time Accept stopwatch; ticker-tape; light gates; motion sensors and dataloggers; smart pulley etc Unworkable methods will not score this mark .	1
B2	Correct measurements taken to find acceleration (e.g. measure a distance and $u = 0$ (if distance/time method used) spacing of successive dots on ticker-tape some detail of sampling rate if motion sensor/datalogger used)	1
B3	Use of results to calculate acceleration (e.g. substitute into $s = ut + \frac{1}{2}at^2$; $a = 25(x_2 - x_1)$ etc) If motion sensor used then acceleration obtained from monitor.	1
C1	 Any one safety precaution (e.g. Catch falling mass in bucket of sand Care needed to prevent mass B from coming over the top of the pulley Whiplash from breaking wires etc. Clamp retort stand to prevent it from falling over. Do not allow vague 'safety goggles'. Insist on a reason being given. 	1
D1/2/3	Any further good design features Some of these might be: Method of supporting the pulley Mention of friction in the pulley/oil pulley/smooth pulley Use large distance (to reduce percentage uncertainty) Limitations of stopwatch methods Vary <i>s</i> and measure <i>t</i> ; use graph to find <i>a</i> Repeat the experiment to find values of <i>a</i> for each value of $m_{\rm B}$ Some detail about the timing circuit (e.g. stop terminals on timer connected to double p switch and electromagnet).	3 ole

10 marks in total.

GCE ADVANCED SUBSIDIARY LEVEL AND ADVANCED LEVEL

MARK SCHEME

MAXIMUM MARK: 40

SYLLABUS/COMPONENT: 9702/06

PHYSICS Paper 6 (Options (A2))

Page 1	Mark Scheme	Syllabus	xtrapap	ers.com
	A/AS LEVEL EXAMINATIONS - JUNE 2003	9702	06	

Categorisation of marks

The marking scheme categorises marks on the MACB scheme.

B marks: These are awarded as <u>independent</u> marks, which do not depend on other marks. For a B-mark to be scored, the point to which it refers must be seen specifically in the candidate's answer.

M marks: These are <u>method</u> marks upon which A-marks (accuracy marks) later depend. For an M-mark to be scored, the point to which it refers must be seen in the candidate's answer. If a candidate fails to score a particular M-mark, then none of the dependent A-marks can be scored.

C marks: These are <u>compensatory</u> method marks which can be scored even if the points to which they refer are not written down by the candidate, providing subsequent working gives evidence that they must have known it. For example, if an equation carries a C-mark and the candidate does not write down the actual equation but does correct working which shows he/she knew the equation, then the C-mark is awarded.

A marks: These are accuracy or <u>answer</u> marks which either depend on an M-mark, or allow a C-mark to be scored.

Conventions within the marking scheme

BRACKETS

Where brackets are shown in the marking scheme, the candidate is not required to give the bracketed information in order to earn the available marks.

UNDERLINING

In the marking scheme, underlining indicates information that is essential for marks to be awarded.

	A/AS LEVEL EXAMINATIONS - JUNE 2003	9702	06	

Option A – Astrophysics and Cosmology

1	(a)		galaxy very distant light (reaching Earth) very faint light absorption in Earth's atmosphere (do not allow refraction) light pollution light scattered	[4]
	(b)		1 arc sec at 6.9 x 10^5 pc corresponds to 6.9 x 10^5 AU C1 1 ly = 6.3 (±0.3) x 10^4 AU or other valid conversion C1 hence distance = 11 light-years A1	[3]
2	(a)		If Universe is (static and) infinite	[3]
	(b)		shows infinite (static) Universe to be incorrect (allow back-credit to (a) for initial supposition	[2]
3	(a)	(i)	electromagnetic radiationB1 <i>either</i> characteristic of black body at 3 K <i>or</i> isotropicB1	[2]
		(ii)	finite age for Universe	[3]
	(b)		radiation takes millions of years to reach Earth	[3]
O	otion I	F – The	Physics of Fluids	
4	(a)		point where line of action of the upthrust or vertical line through centre of buoyancy meets centre line of ship	[2]
	(b)		(when submarine surfaces), water replaced by air <u>in tanks</u> B1 centre of mass <u>and</u> centre of buoyancy will move	[3]
5	(a)		(Bernoulli:) higher speed, lower pressureM1 so A at higher pressureA1	[2]
	(b)		$Av = A_N v_N$ or statement (e.g. incompressible)	[2]
	(c)		$p_1 - p_2 = \Delta p = \frac{1}{2} p(v_2^2 = v_1^2).$ C1 740 = $\frac{1}{2} \times 990 \times (81v^2 - v^2).$ C1 $v = 0.14 \text{ m s}^{-1}.$ A1	[3]
6	(a)	(i)	upthrust = 4/3 x $\pi r^3 \rho_F g$ B1	
		(ii)	resultant downward force = $4/3 \times \pi r^3 (\rho_S - \rho_F)g$ or $4/3 \times \pi r^3 (\rho_S - \rho_F)g - viscous forceB1$	[2]
