

UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS

GCE Ordinary Level

**MARK SCHEME for the October/November 2011 question paper
for the guidance of teachers**

5070 CHEMISTRY

5070/31

Paper 3 (Practical Test), maximum raw mark 40

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

- Cambridge will not enter into discussions or correspondence in connection with these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2011 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

	GCE O LEVEL – October/November 2011	5070	31

1 (a) Titration [12]

Accuracy 8 marks

For the two best titres give:

4 marks for a value within 0.2 cm³ of supervisor

2 marks for a value within 0.3 cm³ of supervisor

1 mark for a value within 0.4 cm³ of supervisor

Concordance 3 marks

Give:

3 marks if all the ticked values are within 0.2 cm³

2 marks if all the ticked values are within 0.3 cm³

1 mark if all the ticked values are within 0.4 cm³

Average 1 mark

Give 1 mark if the candidate calculates a correct average (error not greater than 0.05) of all his ticked values.

Assuming a 25 cm³ pipette and a titre of 24.8 cm³.

(b) concentration of sulfuric acid in P [2]

$$= \frac{25 \times 0.1}{2 \times 24.8} (1)$$

$$= 0.0504 (1)$$

Answers should be correct to + or – 1 in the third significant figure.

(c) concentration of sulfuric acid in battery acid [1]

$$= 0.0504 \times 100 (1)$$

$$= 5.04$$

$$\text{answer from (b)} \times 100$$

(d) mass of sulfuric acid present in 4.50 dm³ of battery acid [1]

$$= 5.04 \times 4.5 \times 98 (1)$$

$$= 2220$$

$$\text{answer from (c)} \times 4.5 \times 98$$

	GCE O LEVEL – October/November 2011	5070	31

2 R is copper(II) sulfate S is copper(I) oxide

Test	Notes
General points For ppt allow solid, suspension, powder For gases Name of gas requires test to be at least partially correct. Effervesces = bubbles = gas vigorously evolved but not gas evolved Solutions Colourless not equivalent to clear, clear not equivalent to colourless	
Solution R	
Test 1 (a) white ppt (1) (b) insoluble in nitric acid (1)	
Test 2 blue ppt (1) soluble in excess (1) dark blue solution (1)	
Test 3 (a) solution turns green (1) (b) blue ppt (1) insoluble in excess (1)	allow green-blue or green-yellow
Test 4 solid turns red or brown (1) blue colour fades (1)	
Test 5 solid turns brown (1) blue solution (1)	allow colour darkens
Test 6 solid turns brown (1) blue solution (1) solid disappears (1) effervescence (1) yellow or brown gas (1)	allow colour darkens

Page 4	Mark Scheme: Teachers' version	Syllabus	Paper
	GCE O LEVEL – October/November 2011	5070	31

Test 7 (a) solid turns white or off-white (1) (b) solid disappears (1) blue solution (1)	
Test 8 (a) no reaction (1) (b) effervescence (1) gas relights a glowing splint (1) oxygen (1) blue solution (1)	

Conclusions

Anion in **R** is sulfate or SO_4^{2-} (in **test 1** ppt in **(a)** must not dissolve in acid) (1)

The metal in **R** and **S** is copper, copper(II), Cu or Cu^{2+} (1)

Note: 27 marking points, maximum 24.
