Paper 2

May/June 2004

1 hour 15 minutes

Candidates answer on the Question Paper. No additional materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name in the spaces provided at the top of this page. Write in dark blue or black pen in the spaces provided on the Question Paper. You may use a soft pencil for any diagrams, graphs or rough working. Do not use staples, paper clips, highlighters, glue or correction fluid.

Answer all questions.

The number of marks is given in brackets [] at the end of each question or part question.

If you have been given a label, look at the details. If any details are incorrect or missing, please fill in your correct details in the space given at the top of this page.

Stick your personal label here, if provided.

D	
E	

(b)	Most cereal plants are wind-pollinated. may differ from insect-pollinated flowers.	Suggest three	ways in whi	ch cereal flo	wers
	1				
	2				
	3				[3]

For Examiner's Use (c) Plants need both magnesium ions and nitrate ions for healthy development. (i) State why each of these is important for healthy development. magnesium ions nitrate ions (ii) Nitrate ions are often provided in fertilisers. Excess fertiliser may be washed into streams and ponds polluting the water. Suggest what is likely to happen in the stream or pond.

BLANK PAGE

Table 4.1 shows the rate of water loss by a plant over a period of 24 hours.

Table 4.1

time/hours	rate of water loss/grams per hour
0300	6
0600	12
0900	18
1200	24
1500	24
1800	20
2100	10
2400	8

(a) Plot the above data on Fig. 4.1.

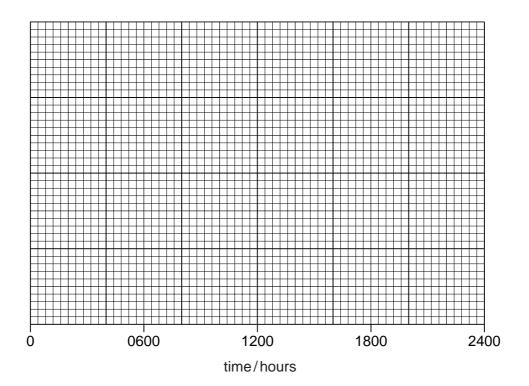

Fig. 4.1

[3]

Www. Papa Cambridge.com (b) (i) Predict and explain how a large increase in humidity at 1000 hours would the rate of water loss in the next two hours.[2] (ii) State two environmental factors, apart from humidity, that can cause a change in water loss and explain how each of these has its effect. 1 factor explanation 2 factor explanation[6] (c) (i) Name the tissue that transports water to the leaves of a plant.[1] (ii) State one other function of this tissue.[1]

7 Fig. 7.1 shows a food web from farmland in Europe.

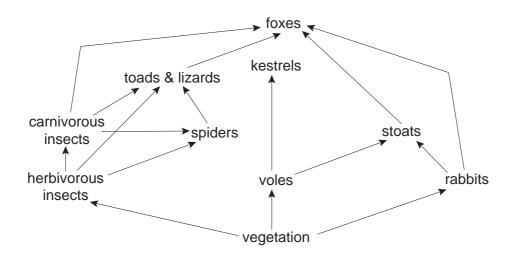

Fig. 7.1

(a) (i) Name an organism from the fourth trophic level of this food web.

		[1]
	(ii)	Using examples from this food web explain the difference between primary and secondary consumers.
		[4]
(b)	(i)	State the source of energy for this food web.
		[1]
	(ii)	In the food web the herbivorous insect population receives the same total amount of energy as the rabbit population. The rabbits pass a smaller percentage of this total energy to the next trophic level compared with the herbivorous insects. Suggest reasons for this difference.
		[c]

	(c)	Мух	comatosis is a disease of rabbits from which there is a high death rate.	Use	
			plain a likely effect on the population of kestrels if there was a serious outbreak komatosis in the rabbit population.	dinnbridge co.
