UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINA

International General Certificate of Secondary Education

MARK SCHEME for the May/June 2006 question

0606 ADDITIONAL MATHEMATICS

0606/01   Paper 1, maximum raw mark 80

These mark schemes are published as an aid to teachers and students, to indicate the requirements of the examination. They show the basis on which Examiners were initially instructed to award marks. They do not indicate the details of the discussions that took place at an Examiners' meeting before marking began. Any substantial changes to the mark scheme that arose from these discussions will be recorded in the published *Report on the Examination*.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the *Report on the Examination*.

The minimum marks in these components needed for various grades were previously published with these mark schemes, but are now instead included in the Report on the Examination for this session.

- CIE will not enter into discussion or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the May/June 2006 question papers for most IGCSE and GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

Mark Scheme Notes

Marks are of the following three types:

M   Method mark, awarded for a valid method applied to
       marks are not lost for numerical errors, algebraic sli
       However, it is not usually sufficient for a candidate just t
       of using some method or just to quote a formula; the fo
       applied to the specific problem in hand, e.g. by sub
       quantities into the formula. Correct application of a formula without the
       formula being quoted obviously earns the M mark and in some cases an M
       mark can be implied from a correct answer.

A   Accuracy mark, awarded for a correct answer or intermediate step correctly
       obtained. Accuracy marks cannot be given unless the associated method
       mark is earned (or implied).

B   Mark for a correct result or statement independent of method marks.

• When a part of a question has two or more "method" steps, the M marks are
  generally independent unless the scheme specifically says otherwise; and similarly
  when there are several B marks allocated. The notation DM or DB (or dep*) is used
  to indicate that a particular M or B mark is dependent on an earlier M or B
  (asterisked) mark in the scheme. When two or more steps are run together by the
  candidate, the earlier marks are implied and full credit is given.

• The symbol $\sqrt{}$ implies that the A or B mark indicated is allowed for work correctly
  following on from previously incorrect results. Otherwise, A or B marks are given for
  correct work only. A and B marks are not given for fortuitously "correct" answers or
  results obtained from incorrect working.

• Note: B2 or A2 means that the candidate can earn 2 or 0.
   B2/1/0 means that the candidate can earn anything from 0 to 2.

The following abbreviations may be used in a mark scheme or

AG   Answer Given on the question paper (so extra c
        ensure that the detailed working leading to the resu

BOD   Benefit of Doubt (allowed when the validity of a
        absolutely clear)

CAO   Correct Answer Only (emphasising that no "follow through" from a
        previous error is allowed)

CWO   Correct Working Only – often written by a 'fortuitous' answer

ISW   Ignore Subsequent Working

MR   Misread

PA   Premature Approximation (resulting in basically correct work that is
        insufficiently accurate)

SOS   See Other Solution (the candidate makes a better attempt at the same
        question)

Penalties

MR –1   A penalty of MR –1 is deducted from A or B marks when the data of a
        question or part question are genuinely misread and the object and
        difficulty of the question remain unaltered. In this case all A and B marks
        then become "follow through $\sqrt{}$" marks. MR is not applied when the
        candidate misreads his own figures – this is regarded as an error in
        accuracy.

OW –1,2 This is deducted from A or B marks when essential working is omitted.

PA –1   This is deducted from A or B marks in the case of premature
        approximation.

S –1   Occasionally used for persistent slackness – usually discussed at a
        meeting.

EX –1   Applied to A or B marks when extra solutions are offered to a particular
   equation. Again, this is usually discussed at the meeting.

1	$y = (x-1)(2x-3)^8$		
	differential of $(2x-3)^8 = 8(2x-3)^7 \times 2$	B1 M1	B1 for 8
	$\rightarrow (x-1) \times$ (his dy/dx) $+ 1 \times (2x-3)^8$	M1	Use of c
	If $x = 2$, dy/dx $= 17$	A1	Correct
		[4]	

2	$y + 4x = 23$ and $xy + x = 20$		
	$\rightarrow 4x^2 - 24x + 20 = 0 \quad y^2 - 22y + 57 = 0$	M1	Complete elimination of x or y
	$\rightarrow (5,3)$ and $(1,19)$	DM1 A1	Soln of quadratic by scheme.
	$m = -4$ Perpendicular $= \frac{1}{4}$	M1	Use of $m_1 m_2 = -1$
	Mid-point $= (3,11)$	B1√	For his two points
	$\rightarrow 4y = x + 41$	A1	Co.
		[6]	

3	(i) Resultant speed $= 1000 \div 2 = 500$	B1	Anywhere in the question.
	Correct triangle – 500,150,45° inc	B1	Any triangle with 45° included between 150 and his resultant.
	$V^2 = 500^2 + 150^2 - 2.500.150\cos45$	M1	Use of cosine rule.
	$V = 408$		
		A1	Co.
		[4]	
	(ii) $\dfrac{408}{\sin 45} = \dfrac{150}{\sin \alpha}$	M1	Use of sine rule.
	$\alpha = 15.1°$		
		A1	Co
		[2]	
	wrong triangle – 500,150,45° not included		
	Max B1B0M1M1 3/6		

4	(i) $f(x) = p - e^x$		
	$x = 0 \rightarrow p - 1 = 2 \rightarrow p = 3$	M1 A1	M for forming equation. Co.
		[2]	
	(ii) $y = 0 \rightarrow e^x = 3 \rightarrow x = \ln 3$	M1 A1√	M for eqn + logs. Decimals ok.
		[2]	Needs
	(iii)	B2,1,0	• correct shape.
			• reflection in y=x or stated
			• x=1.1 and y=2 marked or implied.
		[2]	

5 (i) $B^2 = \begin{pmatrix} 0 & -1 \\ 4 & 3 \end{pmatrix}\begin{pmatrix} 0 & -1 \\ 4 & 3 \end{pmatrix} = \begin{pmatrix} -4 & -3 \\ 12 & 5 \end{pmatrix}$ M1   Needs two
correct

$B^2 - 2A = \begin{pmatrix} -4 & -3 \\ 12 & 5 \end{pmatrix} - \begin{pmatrix} -4 & -2 \\ 12 & 4 \end{pmatrix}$

$P = \begin{bmatrix} 0 & -1 \\ 0 & 1 \end{bmatrix}$ M1
A1   Overall m
co
[3]

(ii) $A^{-1} = \dfrac{1}{2} \times \begin{pmatrix} 2 & 1 \\ -6 & -2 \end{pmatrix}$ B1 B1   B1 for ½. B1 for all 4 elements ok.

The order must be correct.

$Q = BA^{-1}$

$Q = \begin{pmatrix} 0 & -1 \\ 4 & 3 \end{pmatrix}\dfrac{1}{2}\begin{pmatrix} 2 & 1 \\ -6 & -2 \end{pmatrix} = \begin{pmatrix} 3 & 1 \\ -5 & -1 \end{pmatrix}$ M1 A1   Co.
[4]

6 (i) $f(x) = (x+2)(x-(1+\sqrt3))(x-(1-\sqrt3))$ M1   Realising link of roots & cubic
$= (....)(x^2-2x-2)$ B1   For x^2-2x-2
$= x^3-6x-4$ A1   Co
[3]

(ii) Substitute x=3   Remainder = 5   M1 A1√   Must put x=3 into cubic – not for –3
[2]

(iii) $-x = -2 \quad \rightarrow x = 2$
$-x = 1+\sqrt3 \quad \rightarrow x = -1 -\sqrt3$
$-x = 1 -\sqrt3 \quad \rightarrow x = -1 + \sqrt3$ M1 A1   Realising that –x equates with each
root   or
[2]   for replacing x by –x and solving
the cubic.

$(-x)^3 -6(-x) -4 = -x^3 +6x - 4$ has the same roots.

7 $v = pt^2 + qt + 4$

t=1 $\rightarrow a = 2pt+q$ M1   Using a=dv/dt
$\rightarrow 2p+q=8$ A1   Co

t=2 $\rightarrow s = ⅓pt^3+½qt^2+4t ..(+c)$ M1 A1   Integrating for s . co.
$\rightarrow 8p/3 + 2q + 8 = 22$ A1√   Putting t=2 into his s to form linear
eqn in p,q.

Sim equations $\rightarrow$ q=5 and p=1½   DM1 A1   Soln of equations. Co.
[7]

8 (i) $y = \dfrac{1+\sin x}{\cos x}$ Using quotient rule →	M1	Correct d
$dy/dx = \dfrac{\cos x \cos x - (1+\sin x)(-\sin x)}{\cos^2 x}$	A2,1	Everythi
Using $c^2 + s^2 = 1$ → $\dfrac{1+\sin x}{1-\sin^2 x}$	M1	Using c^2 Allow ev
→ $dy/dx = \dfrac{1}{1-\sin x}$	A1 ag [5]	Answer given – beware fortuitous answers
(ii) $\displaystyle\int \dfrac{2}{1-\sin x}\,dx = \left(\dfrac{1+\sin x}{\cos x}\right) \times 2$	M1	Recognition of need to integrate and link with (i) – uses ×2
$\left[\dfrac{2(1+\sin x)}{\cos x}\right]_{\frac{3\pi}{4}}^{\frac{5\pi}{4}} = -0.828 - -4.828 = 4$	M1 A1 [3]	Correct use of limits Co.
9 (a) $u = \log_4 x$ (i) $x = 4^u$	B1	
(ii) $\log_4\left(\dfrac{16}{x}\right) = \log_4 16 - \log_4 x$	M1 A1	Must be "log – log" – or log $(4^2 \div 4^u)$ Co
$= 2 - u$		
(iii) $\log_x 8 = \dfrac{\log_4 8}{\log_4 x} = \dfrac{1.5}{u} = \dfrac{3}{2u}$	M1 A1 [5]	Correct change of base from x to 4 Co
(b) $(\log_3 y)^2 + 2\log_3 y - 8 = 0$	B1	Correct quadratic in $\log_3 y$
Solution of quadratic → 2 and – 4	M1	Correct method for quadratic
$\log_3 y = 2$ → $y = 9$	A1	Co
$\log_3 y = -4$ → $y = 1/81$	A1 [4]	co
10 $f(x) = 3\cos 4x - 1$.		
(i) $\cos 4x = \frac{1}{3}$ (base angle = 70.53) 4x=70.53 or 289.47 or 430.53 or 649.47	M1	$\cos 4x$ subject then ÷ by 4
$x = 17.6°$ or $72.4°$ or $107.6°$ or $162.4°$	A1 A1√ [3]	One pair correct. Other pair correct to first answers.
(ii) amplitude = 3	B1	Co
(iii) period = $90°$ or $\frac{1}{2}\pi$	B1	Co
(iv) maximum value = 3-1 = 2	B1	Co
minimum value = -3 -1 = - 4	B1 [4]	Co
(v)	B1 B1√ B1 [3]	• 2 complete cycles • Max "amp –1" Min "-amp-1" • Starts and finishes correctly

11 EITHER $y = \dfrac{a}{x+b} \;\rightarrow\; xy = -by + a$

x	0.1	0.4	1.0	2.0	3.0
y	8.0	6.0	4.0	2.6	1.9
xy	0.8	2.4	4.0	5.2	5.7

(i)   accurate graph

     M1   Knows wh…

     A2,1   Accuracy …

     [3]   square – by eye.

(ii)   m = -5/4 = -1/ b   b= 0.8 (±0.1)   M1 A1   Recognition of m = -1/b

        C =a/b = 9.0   a = 7.2 (±0.1)   M1 A1   Recognition that $\dfrac{a}{b} = C$

        [4]

(iii)   x = a/y – b   M1   Attempt at making x subject.

        Gradient = a   A1√   On his a.

        Intercept = -b   A1√   On his b.

        [3]

---

11 OR

(i)   Sim eqns with y=x and 5y=3x+30   M1   Uses sim equations

        → (15, 15)   A1   Co.

        Gradient of AB = -3/2

        Perpendicular = ⅔   M1   Uses m₁m₂ – even if ⅔ incorrect

        Eqn of AD   y+3=⅔(x-6)   M1A1   Uses y-k=m(x-h) or y=mx+c

        Put x=15 → y=3   D(15,3)   A1   Co.

        [6]

(ii)   AB = √(6²+9²)   AD = √(6²+9²)   M1   One length correct.

        Therefore isosceles.   A1   Both correct.

Either   Area = ½bh = ½√117√117 = <u>58.5</u>   M1A1   Correct method.

        [4]

or MV of BD = (7.5,3)

        Area = ½BD.MA = ½√234√58.5

        = <u>58.5</u>

or matrix $\dfrac{1}{2}\begin{pmatrix} 0 & 15 & 6 & 0 \\ 6 & 3 & -3 & 6 \end{pmatrix}$

        =½(-45+36-90-18) = <u>58.5</u>

DM1 for quadratic equation. Equation must be set to 0 if using formula or factors.

Formula.   **Factors**

Must be correct   Must attempt to put quadratic into 2 factors.

– ignore arithmetic and algebraic slips.   Each factor then equated to 0.

Q 11 EITHER.

$$y = \frac{a}{x+b}$$

$$xy + by = a$$

$$y = \frac{-xy}{b} + \frac{a}{b}$$

$$\frac{a}{b} = 9$$

$$-\frac{1}{b} = m = -\frac{5}{4} \qquad b = 0.8$$

$$a = 9 \times 0.8 = 7.2.$$
