UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS
International General Certificate of Secondary Education

CANDIDATE NAME	

CENTRE NUMBER						CANDIDATE NUMBER			

CO-ORDINATED SCIENCES   **0654/33**

Paper 3 (Extended)   **October/November 2010**

2 hours

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs, tables or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO **NOT** WRITE IN ANY BARCODES.

Answer **all** questions.

A copy of the Periodic Table is printed on page 28.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

*For
iner's

1 **(a)** In electrochemical cells (batteries), electrical energy is obtained from c........ reactions.

Fig. 1.1 shows some uses of electrochemical cells.

watch   torch (flashlight)

car
battery

Fig. 1.1

(i) Small electrochemical cells, like those used in watches and torches (flashlights), stop working and have to be replaced fairly frequently.

Explain what has happened inside the cells to cause them to stop working.

....

.... [1]

(ii) Explain why car batteries may never need to be replaced during the lifetime of the car.

....

.... [1]

(b) Electrical energy may be obtained from an electrochemical cell made by placing electrodes into a potato.
Fig. 1.2 shows a diagram of such a cell.

Fig. 1.2

A student investigated the use of different metals as electrodes. The metals he used are listed below in order of reactivity.

magnesium	(most reactive)
zinc	
lead	↓
copper	(least reactive)

(i) Suggest why a potato can be used as part of an electrochemical cell.

....

.... [1]

(ii) State the pair of metals from the list that would produce the highest voltage when used as the electrodes.

Explain your answer.

....

....

.... [2]

**(c)** Some modern cars, known as hybrids, have two engines.

One of these engines uses hydrocarbon fuel (gasoline) which is combusted (burned) to provide the energy required to move the car.

The second engine is a powerful electric motor which uses energy provided by an electrochemical cell.

When the car moves away from rest and continues to move slowly, the electric motor drives the car and the combustion engine is switched off.

(i) Heptane, C_7H_{16}, is an alkane found in gasoline.

Complete the balanced symbolic equation below for the combustion of heptane.

$$C_7H_{16} \; + \; \text{..............................} \; \rightarrow \; 7CO_2 \; + \; 8H_2O \qquad \text{[2]}$$
(ii) Suggest why there could be an improvement to the environment, particularly in towns and cities, if hybrid cars replaced ordinary cars.

....

....

....

....

.... [3]

2 **(a)** Fig. 2.1 is a photograph of a plant tissue seen through a light microscope.

A   B
Fig. 2.1

(i) Name the structures labelled **A** and **B**.

A ....

B .... [2]

(ii) Describe **two** ways in which the cells in Fig. 2.1 differ from animal cells.

1 ....

2 .... [2]

(b) Fig. 2.2 shows apparatus that was used to investigate transpiration. The two pieces of apparatus were set up and left in the same conditions for 24 hours. The levels of water at the start and end of the 24 hours are shown on the diagram.

**Fig. 2.2**

(i) Suggest why the level of water went down more in **Q** than in **P**.

[3]

(ii) Predict the results that would be obtained if apparatus **Q** was left in the same position for the next 24 hours, but at a higher temperature.

Explain your prediction.

[3]

3 (a) The isotope protactinium-234 undergoes radioactive decay by emitting beta rad... Protactinium-234 has a half-life of 105 seconds.

(i) Explain the meaning of the terms *radioactive decay* and *half-life*.

radioactive decay ....

....

half-life ....

.... [2]

(ii) 0.400 mg of protactinium-234 decays until 0.025 mg remain.

Calculate how long this takes.

Show your working.

.... [2]

(b) Apart from nuclear weapons and nuclear power, describe **one** practical use of radioactive isotopes.

....

....

....

.... [2]

4 **(a)** Fig. 4.1 shows the percentage of people living in Australia who have blood gro... A, B and AB.

**Fig. 4.1**

(i) Blood groups in humans show discontinuous variation.

Explain what is meant by *discontinuous variation*.

....

....

.... [2]

(ii) Use the information in Fig. 4.1 to suggest whether a person's blood group is caused by their genes, their environment, or both genes and environment.

Explain your answer.

....

....

.... [2]

(b) (i) Give **one** example of continuous variation in humans.

....

(ii) On the axes below, sketch a graph to show continuous variation in the feature you have given in **(b)(i)**.

Label the axes on your graph.

`

[3]

(c) All species show variation in some of their characteristics.

Explain why this variation is important in evolution. You may like to use an example to help your explanation.

....

....

....

....

....

.... [4]

BLANK PAGE

5 **(a)** Fig. 5.1 shows a simple circuit containing two identical lamps.
Fig. 5.1

Ammeter **A**$_1$ reads 0.30 A.

Write down the readings on

ammeter **A**$_2$ ....

ammeter **A**$_3$ ....

voltmeter **V**$_1$ ....

voltmeter **V**$_2$ ....   [2]

(b) A student investigated the relationship between the potential difference across and the current in the lamp.

Fig. 5.2 shows a graph of the results of this investigation.

Fig. 5.2

(i) Calculate the resistance of the lamp when the current was 0.6 A.

State the formula that you use and show your working.

formula used

working

.... [2]

For
iner's

(ii) Explain why the lamp does not obey Ohm's law.

....

....

.... [2]

(iii) On Fig. 5.2, sketch a line which could have been obtained if the lamp did obey Ohm's law. [1]

(c) Fig. 5.3 shows a soft iron ring. Two coils **X** and **Y**, each of 400 turns, are wound around the ring. Coil **X** is connected to a power supply and coil **Y** is connected to a 6 V lamp.

power supply

coil **X**

coil **Y**

Fig. 5.3

Describe and explain what happens to the lamp when

the power supply is 6 V d.c.,

....

....

the power supply is 6 V a.c.

....

.... [3]

For
iner's

6   Table 6.1 shows some properties of five elements, **P** to **T**. The code letters are i... chemical symbols of the elements.

Table 6.1

element code letter	melting point / °C	boiling point / °C	conduction of electricity	number of outer electrons in an atom
P	−89	−186	insulator	8
Q	−39	357	conductor	2
R	−7	58	insulator	7
S	181	1342	conductor	1
T	114	184	insulator	7

Answer the following questions, using **only** the code letters of the elements shown in Table 6.1.

(a) (i)   State and explain which element is very unreactive.

element ....

explanation ....

.... [1]

(ii)   State and explain which element is a metal and a liquid at a room temperature of 20 °C.

element ....

explanation ....

....

.... [2]

(iii)   Elements **R** and **T** are halogens.

Use information from Table 6.1 to state and explain which of these elements has the greater proton number.

element ....

explanation ....

....

.... [2]

(b) Fig. 6.1 shows atoms of the two elements, **R** and **S**. Only the outer electron sh ... shown.

Fig. 6.1

Elements **R** and **S** react vigorously together to form an ionic compound.

The compound that forms has a very high melting point.

(i) Describe, in terms of electrons, how ionic bonds are formed between atoms of **R** and **S**.

....

....

....

.... [2]

(ii) Explain, in terms of structure and the forces between ions, why the compound containing **R** and **S** is a solid with a high melting point.

....

....

....

.... [3]

(c) Suggest the process which is used to extract the element potassium from its compounds.

Give a reason for your choice of process.

....

....

.... [2]

7 Fig. 7.1 shows the driving force acting on a car of mass 1200 kg travelling at a c... speed of 18 m / s.

driving force
1000 N
Fig. 7.1

(a) Calculate the amount of work done by the driving force in one minute.

Show your working.

.... [2]

(b) The car when travelling at 18 m / s is stopped using a braking force of 10 000 N.

  (i) Calculate the deceleration of the car.

  State the formula that you use and show your working.

    formula used

    working

.... [2]

  (ii) Calculate the time needed for the car to stop.

  State the formula that you use and show your working.

    formula used

    working

.... [2]

(c) Fig. 7.2 shows a car on a hydraulic lift in a garage. The total weight being lifted is 18⏤
The lift uses four large pistons. Each large piston has an area of 0.03 m^2. The sm⏤
piston **X** has an area of 0.01 m^2.

Fig. 7.2

(i) Calculate the total area of the four large pistons.

.... [1]

(ii) Use the formula

pressure = force / area

to calculate the pressure in the hydraulic fluid used in the lift.

Show your working.

.... [1]

(iii) This pressure is caused by piston **X**.

Calculate the minimum force which piston **X** must exert to lift the car.

Show your working.

.... [1]

For
Examiner's

**8** Fig. 8.1 shows a section through the human thorax.

Fig.8.1

(a) On the diagram, use a label line and the appropriate letter to indicate:

    A   a muscle that contracts to bring about inspiration (breathing in)

    B   an area where gas exchange takes place

    C   a structure that rises during expiration (breathing out)   [3]

(b) Describe the pathway taken by blood as it passes from the heart to the lungs and back to the heart again.

....

....

....

.... [3]

(c) Describe how the blood transports oxygen.

....

....

.... [2]

(d) Describe how oxygen is supplied to a developing fetus in its mother's uterus.

....

....

....

.... [3]

9 Nitrogen compounds in soil are taken up by growing crops.

Fig. 9.1 shows two ways in which nitrogen compounds may be added to soil used for growing crops.

Fig. 9.1

(a) (i) State the meaning of the term *nitrogen fixation* and describe briefly **one** way in which this can occur.

....

....

....

.... [3]

(ii) Explain why nitrogen molecules taken directly from the air **cannot** be used by most growing crops.

....

.... [1]

For
iner's

(b) The nitrogen in NPK fertiliser exists in the form of compounds such as the ammonium nitrate, NH_4NO_3, and diammonium phosphate, $(NH_4)_2HPO_4$.

Diammonium phosphate may be obtained by reacting ammonia with phosphoric acid.

The balanced symbolic equation for this reaction is

$$2NH_3 + H_3PO_4 \rightarrow (NH_4)_2HPO_4$$
(i) State the number of moles of diammonium phosphate which are produced when 0.1 mol of ammonia react.

.... [1]

(ii) The relative formula mass of diammonium phosphate is 132.

Calculate the mass of diammonium phosphate which is produced when 0.1 mol of ammonia reacts.

Show your working.

.... [2]

(c) Plants produce glucose which provides energy during respiration.

Excess glucose is stored in the plant in the form of starch.

(i) Outline, in terms of molecules, what happens when glucose is changed into starch.

....

....

.... [2]

(ii) Glucose is soluble in water but starch is insoluble.

Describe and explain the difference in appearance between a solution of glucose and the sol (colloid) which forms when starch is dispersed in water.

....

....

....

.... [3]

10 (a) An athlete of mass 70 kg is running at a speed of 10 m / s in a sprint race.

Calculate the athlete's kinetic energy.

State the formula that you use and show your working.

formula used

working

.... [3]

(b) At the end of the race, evaporation helps to cool the athlete.

(i) Use the idea of particles to explain how evaporation helps the athlete to cool down.

....

....

.... [2]

(ii) At the end of a long race, an athlete may be wrapped in a shiny foil blanket to prevent him cooling down too quickly.

Explain how the shiny foil blanket helps to reduce energy losses. Use ideas about conduction, convection and radiation in your answer.

....

....

....

.... [3]
