Paper 3 (Core)

October/November 2019

2 hours

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units.

A copy of the Periodic Table is printed on page 32.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

This document consists of **30** printed pages and **2** blank pages.

1 (a) Fig. 1.1 is a photograph of blood as seen under a microscope.

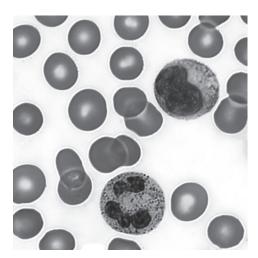

Fig. 1.1

(i) Use a label and a label line on Fig. 1.1 to identify a white blood cell. [1](ii) Name one other type of cell visible in Fig. 1.1.

[1]

(b) White blood cells produce antibodies that fight infection in the body.

The graph in Fig. 1.2 shows how the number of antibodies in the blood changes for 15 days after a person is infected by a pathogen.

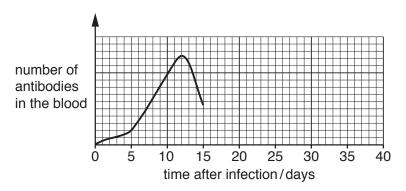

Fig. 1.2

(i) Use Fig. 1.2 to identify on which day there are the **most** antibodies in the blood.

.....[1]

(ii) Suggest **one** reason why there is a decrease in the number of antibodies in the blood as shown in Fig. 1.2.

......[1]

© UCLES 2019 0654/32/O/N/19

(c)	Twenty days after the first infection, the same person is infected with a different pathogen.
	Draw a line on Fig. 1.2 to suggest how the number of antibodies in the blood changes from day 15.
(d)	Platelets are also found in the blood.
	State the function of platelets.
	[1]
	[Total: 7]

2 Fig. 2.1 is a diagram of an atom of element Q.

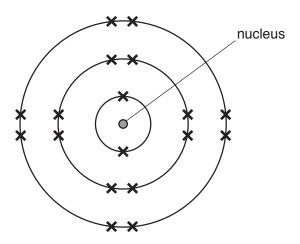

Fig. 2.1

(a) (i)	Explain why the mass of an atom is almost the same as the mass of its nucleus.	
		[1]
(ii)	Use Fig. 2.1 to identify element Q .	
	A copy of the Periodic Table is shown on page 32.	
	Explain your answer.	
	element	
	explanation	
		 [2]
(iii)		[~]
		[4]

(b)	A te	acher investigates the change in mass when calcium burns in air to form calcium oxide.
	(i)	The mass of calcium oxide produced is greater than the mass of calcium the teacher used.
		Explain this result.
		[1]
	(ii)	The teacher mixes calcium oxide with water to form a solution.
		Predict the pH of the solution.
		Explain your answer.
		prediction
		explanation
		[2]
		[Total: 7]

3 (a) A girl runs around a 400 m athletics track.

State a device she could use to measure precisely the time this takes.

......[1]

(b) Fig. 3.1 shows the speed-time graph for her run around the track.

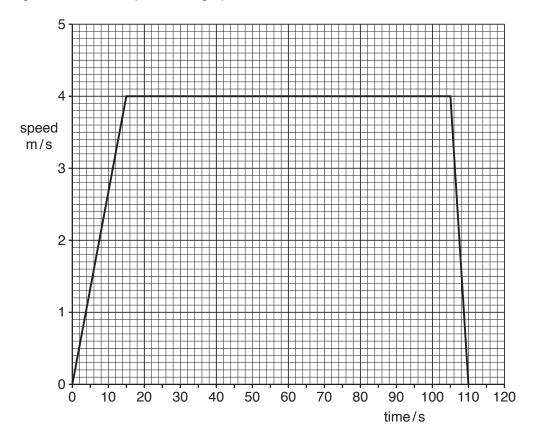

Fig. 3.1

(i)	Label with the letter X a point on the graph when the girl is running at constant speed		
		[1]	

(ii) Label with the letter Y a point on the graph when the girl is at rest. [1]

(iii) The girl's deceleration is greater than her acceleration.

Describe the evidence for this from the graph.

[1]

(iv) Calculate the distance travelled by the girl in the first 15 seconds of her run.

	distance = m [2]
(c) Wh	nen she returns home, the girl rings the doorbell.
	e electric circuit for the doorbell contains a cell, a switch and an electric bell all connected series.
T	is the symbol for an electric bell.
(i)	Complete the circuit diagram for the doorbell.
	[2]
(ii)	The potential difference across the electric bell is 6 V.
	The resistance of the electric bell is 2Ω .
	Calculate the current in the circuit.
/***	current = A [2]
(iii)	The girl hears the bell clearly.
	State the approximate range of audible frequencies that the girl is able to hear with healthy hearing.
	from
	[1]
© UCLES 2019	[Total: 11] 0654/32/O/N/19 [Turn over

4 (a) Respiration is a process that is part of the carbon cycle.

Use words from the list to complete the definition of the term *respiration*.

Each word may be used once, more than once or not at all.

cells	DNA	elements	energy	
	enzymes	molecules		
Respiration is th	ne chemical reactions i	n	that break do	wn nutrient
	and release			[3]

(b) Fig. 4.1 is a simplified diagram of the carbon cycle.

Some of the processes that take place in the carbon cycle are represented with the letters ${\bf A}$, ${\bf B}$, ${\bf C}$ and ${\bf D}$.

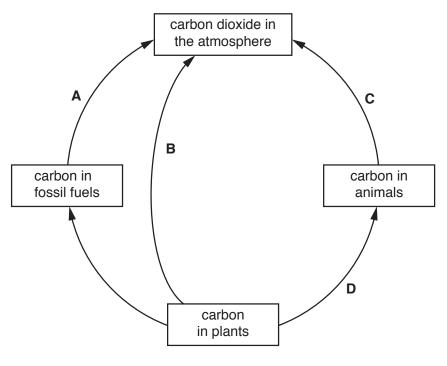

Fig. 4.1

(i) Identify all the letters that represent respiration in Fig. 4.1.

(ii) Add an arrow to Fig. 4.1 to represent photosynthesis. [2]

(c)	Deforestation can cause an increase of carbon dioxide in the atmosphere.
	Animal species living in areas where deforestation occurs are also affected.
	Describe two effects of deforestation on animal species.
	1
	2
	[2]
	[Total: 8]

[2]

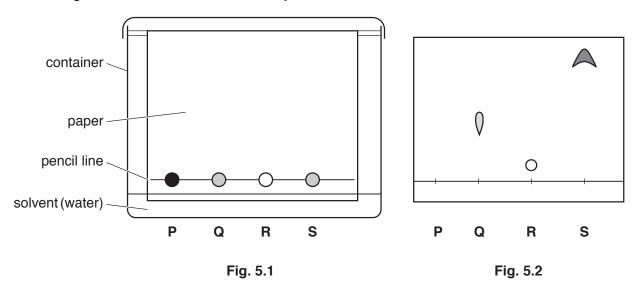

Impurities are techniques.	unwanted	substances	in	mixtures.	Impurities	can	be	removed	using	purification
•										

(a)	Some	gaseous	oxides	are in	npurities	which	pollute	ai
(u)	COILIC	gaocoao	ONIGOU	are in	iparitico	*******	ponato	u

Name the gaseous oxide that forms when sulfur burns.
[1]
Describe how this gaseous oxide can damage the environment.
[2]
[2]
Identify two gaseous oxides, other than water vapour or carbon dioxide, that can form during the combustion of hydrocarbons in air.

(b) A scientist uses the apparatus shown in Fig. 5.1 to test four food dyes, P, Q, R and S.

Fig. 5.2 shows her results for food dyes Q, R and S.

(i) Name this method the scientist uses to test the food dyes.

______[1

(ii)	Describe what happens inside the container that produces the results shown in Fig. 5.2.
	[3]
iii)	Food dye P is made by mixing together food dyes Q , R and S .
	Complete Fig. 5.2 by drawing the result for food dye P . [2]
iv)	Suggest why impurities in food dyes must be removed before the dyes are used to colour food.
	[1]
	[Total: 12]

6

(b) Fig. 6.1 shows the towers of cubes built by two teams.

Team A's tower is only 6 cubes tall before it falls over.

Team B's tower reaches 10 cubes tall and stays standing.

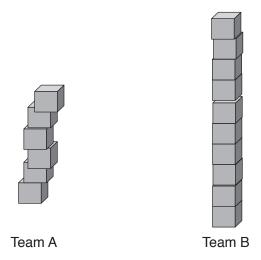

Fig. 6.1

	(i)	Use ideas about stability and centre of mass to suggest why team A's tower falls over.
		[2]
	(ii)	Explain why more work is done to lift a cube to the top of the tower as the tower gets taller.
		[1]
	(iii)	State the type of energy that is greater for a cube at the top of the tower compared with a cube lower down the tower.
		[1]
(c)	One	e student hits two cubes together. He hears the sound echo from the back wall of the m.
		time interval from the student hitting the cubes to the student hearing the echo is seconds.
	The	distance to the wall is 39 m.
	Cald	culate the speed of sound through the air.
		speed of sound = m/s [3]

[Total: 11] [Turn over 7 (a) In plants, glucose produced by photosynthesis is stored in leaves as starch.

A student investigates one factor that affects photosynthesis by testing for the presence of starch in the leaves of two plants, $\bf A$ and $\bf B$.

- Plant A is kept next to a window for two days.
- Plant B is kept in the dark for two days.

The student uses iodine solution to test leaves from plants **A** and **B** for the presence of starch.

	(i) Predict the colour of the iodine solution after testing a leaf from each plant for starc			
		colour of iodine solution after testing a leaf from plant A		
		colour of iodine solution after testing a leaf from plant B		
			[2]	
	(ii)	State the factor needed for photosynthesis which the student is investigating.		
			[1]	
(b)	Soil	provides mineral ions to plants for healthy growth.		
	Ехр	lain the importance of magnesium ions for healthy plant growth.		
			[2]	

(c)	Water is another substance needed by plants.					
	(i)	Describe how water enters a plant.				
	(ii) Describe how water is lost from a plant.					
		[3				
		[Total: 10				

- 8 Sodium is a very reactive metallic element.
 - (a) Sodium chloride is a raw material that occurs in nature.
 - Fig. 8.1 shows a process that is used to extract useful products from concentrated aqueous sodium chloride.

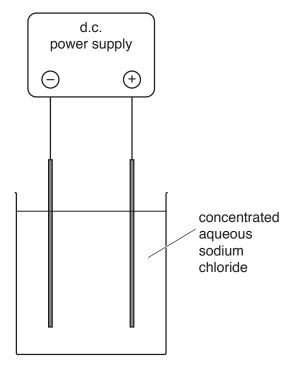

Fig. 8.1

(i)	Name this process.
(ii)	On Fig. 8.1, use the letter E to label the electrolyte and the letter C to label the cathode. [2]
(iii)	State one useful gaseous element produced by this process.
	[1]

(b) Fig. 8.2 shows how sodium is stored so that it does not react with air.

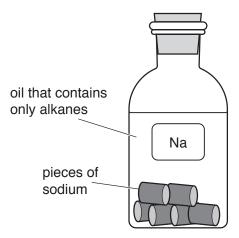

Fig. 8.2

(i)	Suggest one compound that forms when sodium reacts in air.			
	[1]			
(ii)	Suggest one reason why oil containing alkanes is a suitable liquid to use to protect sodium from contact with air.			
	[1]			

(c) Fig. 8.3 shows apparatus a teacher uses to show the reaction between sodium and cold water.

The water contains a solution of full-range universal indicator.

The gas that is given off collects in the test-tube.

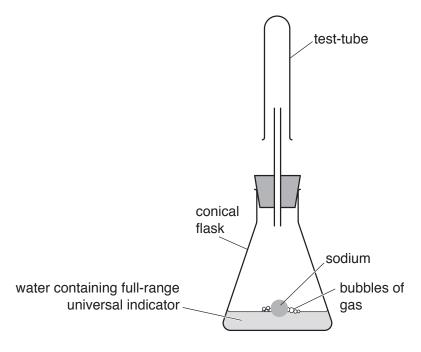

Fig. 8.3

(i) Before the sodium is added the water is neutral.

State the pH of the	water and	the colour	of the	full-range	universal	indicator	before	any
sodium is added								

	pH
	colour[2]
(ii)	The teacher tests the gas in the test-tube using a lighted splint. She obtains a positive result.
	Describe the positive result and identify the gas.
	positive result
	ann
	gas[2]

© UCLES 2019 0654/32/O/N/19

(d)	Sodium combines with bromine to form sodium bromide.						
	(i)	State the type of chemical bonding in sodium bromide.					
						[1]	
	(ii)	Balance the symbol equation for this reaction.					
		Na	+	Br_2	\rightarrow	NaBr	[1]
							[Total: 12]

(a) A battery from a mobile phone (cell phone) is analysed to see what it contains.

	One of the materials is the metal lithium. The sample taken from the battery consists of two types of lithium atom, lithium-6 and lithium-7.				
(i)	Name the two types of particle in the nucleus of an atom.				
	and[1]				
(ii)	The nuclide notation for lithium-6 is written as ${}^6_3\mathrm{Li}$.				
	State what each of the numbers in the nuclide notation represents.				
	6 represents				
	3 represents	[2]			
(iii)	The nuclide notation for lithium-7 is written as $\frac{7}{3}$ Li.	[-]			
(,	Explain why this is an isotope of lithium.				
		[1]			
(b) The	e lithium battery is connected to a lamp to produce visible light.				
(i)					
gamma rays		radio waves			
	Fig. 9.1	[1]			
(ii)	The lithium battery produces an electromotive force (e.m.f.).				
	State the unit of e.m.f.				
	[1]				

9

(c) Fig. 9.2 shows the arrangement of lithium atoms in three different states of matter.

Label Fig. 9.2 to identify the state represented in each diagram.

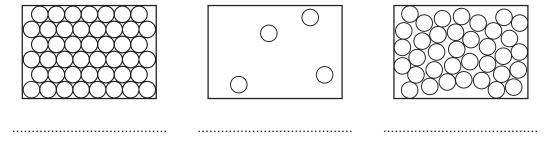

Fig. 9.2

[2]

[Total: 8]

10 (a) Fig. 10.1 is a diagram showing a simple reflex arc.

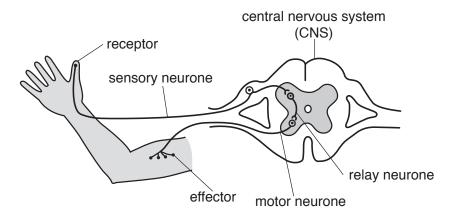

Fig. 10.1

(i) If a neurone is cut, impulses **cannot** pass along the neurone.

Place **only two** ticks (\checkmark) in Table 10.1 to show the correct effect of cutting each neurone in the reflex arc shown in Fig. 10.1.

Table 10.1

	sensory neurone cut	motor neurone cut
CNS does not receive impulses from the receptor and effector does not receive impulses from CNS.		
CNS receives impulses from the receptor and effector receives impulses from CNS.		
CNS receives impulses from the receptor but effector does not receive impulses from CNS.		

- 1	\sim 1
- 1	71
- 1	

(ii) Circle all the words that can be used to describe a reflex action.

chemical

automatic

		[2]
(b)	State how impulses are passed along a neurone.	
		171

conscious

rapid

slow

(c)	Name the two parts of the central nervous system.	
	1	
	2	
		[2]
(d)	Muscles are one example of an effector.	
	Name another example of an effector.	
		[1]
	[Tota	al: 8]

- 11 Useful hydrocarbons are obtained from petroleum.
 - (a) Fig. 11.1 shows the industrial process used to separate useful hydrocarbons from petroleum.

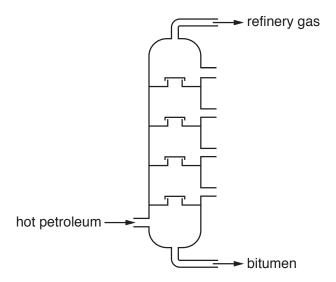

Fig. 11.1

	(i)	Name this process shown in Fig. 11.1.
		[1]
	(ii)	State if chemical changes or physical changes are involved when useful hydrocarbons are obtained from petroleum in this process.
		Explain your answer.
		changes
		explanation
		[1]
	(iii)	Refinery gas and bitumen are obtained from petroleum.
		State one use of refinery gas and one use of bitumen.
		refinery gas
		bitumen[2]
		رک)
(b)		lain why the measurement of boiling temperature can be used to find out whether a liquid pure alkane or a mixture of alkanes.
		[4]

[2]

- (c) Methane and ethane are gaseous alkanes.
 - (i) Complete the dot-and-cross diagram of a molecule of methane.

In your diagram, show:

- the chemical symbols of the elements
- the arrangement of the outer shell electrons.

(ii) State why ethane is a **saturated** hydrocarbon.

[1]

State the name of the **unsaturated** hydrocarbon that has only two carbon atoms in each of its molecules.

[1]

[1]

12	A boy	swims	in	а	heated	swim	ming	pool.
----	-------	-------	----	---	--------	------	------	-------

(a)	Water molecules with enough energy escape from the surface of the swimming pool.	
	Name the process in which more-energetic molecules escape from the surface of a liquid.	
		[1]
(b)	Fig. 12.1 shows a boy looking at an object at the bottom of the pool.	
	A ray of light is shown from the object to the boy's eye.	

The ray of light is refracted as it leaves the water.

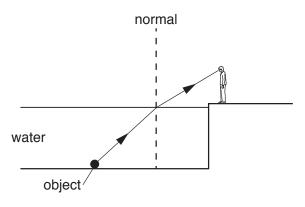

Fig. 12.1

	(i)	Describe why the light is refracted.	
			[1
	(ii)	On Fig. 12.1, mark the angle of incidence and label with the letter <i>i</i> .	[1
(c)		boy stands in the swimming pool and repeatedly splashes his hand on the ser to create a regular set of waves.	surface of the

Place the terms relating to wave properties into the correct sentence. Each word may be used once, more than once, or not at all.

amplitude	frequency	speed	wavefront	wavelength
By splash of the wa	ning his hand more time ves.	es per second, he	will increase the	
By splash	ning his hand harder, th	ne height of the wa	aves increases, which	means the
	has inc	reased.		
By splash	ning his hand more slow	wly, he notices tha	at the distance betweer	n each crest of the
wave has	increased, which mea	ins the	has incre	eased. [3]

PapaCambridge

(d) Fig. 12.2 shows the boy swimming.

Fig. 12.2

	(i)	State what happens to the swimming speed of the boy if his driving force becomes less than the frictional force.
		[1]
	(ii)	State what happens to the swimming speed of the boy if his driving force is equal to the frictional force.
		[1]
(e)		temperature of the water in the swimming pool is measured using a liquid-in-glass mometer.
	Befo	ore the water temperature is measured, the thermometer has a reading of 20 °C.
	Whe	en used to measure the temperature of the water, the thermometer reading rises to 28 °C.
	Exp	lain why the liquid inside the thermometer rises when the thermometer is put into the er.
		[2]
		[Total: 10]

13 (a) Fig. 13.1 is a diagram of a flower.

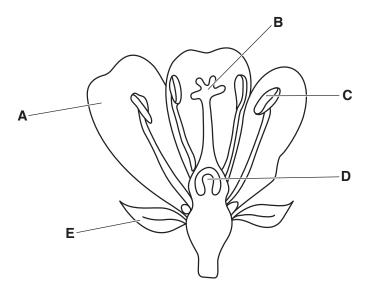

Fig. 13.1

Table 13.1 shows some of the parts labelled in Fig. 13.1.

Table 13.1

part	letter in Fig. 13.1	function
		protects flower when in bud
anther	С	produces pollen
petal		
		produces ovules

	Use Fig. 13.1 to complete Table 13.1.	[3]
(b)	Describe fertilisation in plants.	
		[2]

© UCLES 2019 0654/32/O/N/19

(c)	Name the cell formed by the fusion of the nuclei of gametes.	
		[1]
(d)	State the number of parents needed for:	
	asexual reproduction	
	sexual reproduction.	
		[1]
	गा	otal: 7]
