**MARK
SCHEME**

GCSE MATHEMATICS JANUARY 2012

Introduction

The mark scheme normally provides the most popular solution to each question. Other solutions given by candidates are evaluated and credit given as appropriate; these alternative methods are not usually illustrated in the published mark scheme.

The marks awarded for each question are shown in the right-hand column and they are prefixed by the letters **M**, **A** and **MA** as appropriate. The key to the mark scheme is given below:

M indicates marks for correct method.

A indicates marks for accurate working, whether in calculation, readings from tables, graphs or answers.

MA indicates marks for combined method and accurate working.

The solution to a question gains marks for correct method and marks for an accurate working based on this method. Where the method is not correct no marks can be given.

A later part of a question may require a candidate to use an answer obtained from an earlier part of the same question. A candidate who gets the wrong answer to the earlier part and goes on to the later part is naturally unaware that the wrong data is being used and is actually undertaking the solution of a parallel problem from the point at which the error occurred. If such a candidate continues to apply correct method, then the candidate's individual working must be **followed through** from the error. If no further errors are made, then the candidate is penalised only for the initial error. Solutions containing two or more working or transcription errors are treated in the same way. This process is usually referred to as "follow-through marking" and allows a candidate to gain credit for that part of a solution which follows a working or transcription error.

It should be noted that where an error trivialises a question, or changes the nature of the skills being tested, then as a general rule, it would be the case that not more than half the marks for that question or part of that question would be awarded; in some cases the error may be such that no marks would be awarded.

Positive marking:

It is our intention to reward candidates for any demonstration of relevant knowledge, skills or understanding. For this reason we adopt a policy of **following through** their answers, that is, having penalised a candidate for an error, we mark the succeeding parts of the question using the candidate's value or answers and award marks accordingly.

Some common examples of this occur in the following cases:

- (a) a numerical error in one entry in a table of values might lead to several answers being incorrect, but these might not be essentially separate errors;
- (b) readings taken from candidates' inaccurate graphs may not agree with the answers expected but might be consistent with the graphs drawn.

When the candidate misreads a question in such a way as to make the question easier only a proportion of the marks will be available (based on the professional judgement of the examiner).

			AVAILABLE MARKS
1	(a) Approx 54	A1	2
	(b) in range 70–74	A1	
2	(a) One vertical line	A1	3
	(b) One vertical, one horizontal and 2 diagonals	A2	
3	(a) yellow	A1	4
	(b) purple	A1	
	(c) On first 1 chance in 5, on second 1 chance in 6 which is smaller	A2	
4	(a) $120 + 45 \times 9$	M1	10
	120 + 405	A1	
	525	A1	
	(b) 2 63.98	A1	
	1 5.49	A1	
	5.75		
	75.22	A1	
(c) $\text{£}6.50 \times 12 = \text{£}78$	MA1		
$\text{£}6.50 \times 1\frac{1}{2} = \text{£}9.75$	MA1		
$4 \times 9.75 = \text{£}39$	MA1		
$\text{£}39 + \text{£}78 = \text{£}117$	A1		
5	(a) 6	A1	3
	(b) 2	A1	
	(c) 3	A1	
6	(a) $\frac{15}{300}$ or equivalent	MA2	4
	(b) $\frac{271}{300}$	MA2	
7	(a), (b) Rectangle, parallelogram, rhombus	A1, A1 any order	2

				AVAILABLE MARKS			
8	(a) $2500 + 200 \times 12$ 4900	MA1	A1				
	(b) 6000		A1				
	(c) number of payments		A1				
	(d) $8000 - 2600 = 5400$ $5400 \div 12$ 450	MA1 M1 A1			7		
9	(a) 2		A1				
	(b) 4		A2				
	(c) correct enlargement		A3		6		
10	(a)						
		27	29		31		
		27	29		31	33	
		27	29		31	33	35
		29	31		33	35	37
(b)	$\frac{6}{20}$ or equivalent	MA2		4			
11	Identifying 5 cards	MA1					
	$\frac{5}{9}$		A1		2		
12	$\frac{1}{2}(7.5 + 10.5) \times 4.5$		M1				
	40.5		A1		2		
13	1 part represents 16	MA1	or	1 part represents 16	MA1		
	9 parts = $9 \times 16 = 144$	M1A1		Peter = 80 Paul = 64 Total = 144	MA1 A1		3
14	(a) 9, 1		A2				
	(b) correct points smooth curve		A1				
			A1		4		
Total				56
