Unit C1

Higher Tier

[GDW22]

GDW22

THURSDAY 16 MAY 2019, MORNING

TIME

1 hour.

INSTRUCTIONS TO CANDIDATES

Write your Centre Number and Candidate Number in the spaces provided at the top of this page.

You must answer the questions in the spaces provided.

Do not write outside the boxed area on each page or on blank pages.

Complete in black ink only. **Do not write with a gel pen.**

Answer **all eight** questions.

INFORMATION FOR CANDIDATES

The total mark for this paper is 70.

Figures in brackets printed down the right-hand side of pages indicate the marks awarded to each question or part question.

Quality of written communication will be assessed in Question 6.

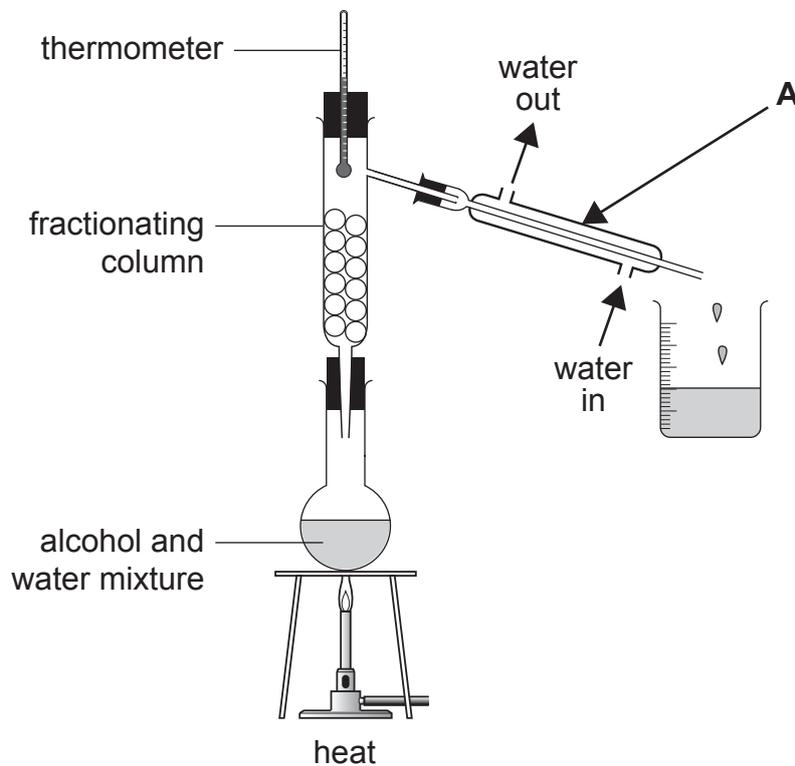

A Data Leaflet, which includes a Periodic Table of the Elements, is included in this question paper.

12324

20GDW2201

- 1 The diagram below shows the apparatus that can be used in the laboratory to obtain a **pure** sample of **ethanol** from a mixture of ethanol and water.

- (a) (i) What is the **full** name of this separation process?

_____ [1]

- (ii) What is the name of the piece of apparatus labelled **A**?

_____ [1]

- (iii) Why is water flowing through **A**?

_____ [1]

(b) (i) Why can the sample of ethanol obtained from this process be described as pure?

_____ [1]

(ii) Which piece of apparatus in the diagram can be used to prove that the sample of ethanol collected is pure?

_____ [1]

[Turn over

- 2 (a) (i) The table below gives information about atomic structures.
Complete the table by filling in the blank spaces.

atom	atomic number	mass number	electronic configuration
A	6	12	2,4
B		14	2,5
C	6	14	
D	14	28	
E		24	2,8,2

[4]

- (ii) Which two atoms **A**, **B**, **C**, **D** or **E** are isotopes?

_____ and _____

[1]

(b) Silicon has three naturally occurring isotopes.

Use the information in the table below to calculate the relative atomic mass of silicon to **two decimal places**.

Show your working out.

Mass number	Relative abundance
28	93%
29	5%
30	2%

_____ [2]

3 Nanoparticles are used in healthcare, sports equipment, clothing and in sun creams.

(a) What is the size of nanoparticles? Circle the correct answer.

0 – 1 nm

1 – 10 nm

10 – 100 nm

1 – 100 nm

[1]

(b) The table below gives some uses of nanoparticles and the properties they provide to the products.

Property \ Use	strong	better UV protection	light	antibacterial/ removes odours	transparent
golf clubs	✓		✓		
socks				✓	
sun creams		✓			✓

The nanoparticles in socks are made of silver while those in sun creams are made of zinc oxide and titanium dioxide.

Zinc oxide is a white material that gives good protection from UV rays.

Titanium dioxide is used to reduce the white colour and make sun creams less visible.

Use the information given to answer the following questions.

(i) Give the name of a transition metal mentioned in the passage.

_____ [1]

(ii) Which nanoparticle is used to reduce the smell of sweaty feet?

_____ [1]

(iii) What are the advantages of using nanomaterials in golf clubs?

_____ and _____ [1]

(iv) Which chemical compound gives good protection from UV light?

_____ [1]

(v) Which chemical substance makes the sun creams more transparent?

_____ [1]

(c) Give **one** risk other than 'harmful effect on the environment', associated with the use of nanoparticles in sun cream.

_____ [1]

[Turn over

4 Magnesium fluoride is an ionic compound.

(a) (i) What is the chemical formula of magnesium fluoride?

_____ [1]

(ii) Explain fully what happens to the electronic configuration of the **magnesium atom** when it forms an ionic bond with fluorine atoms.

_____ [2]

(iii) Explain what happens to the electronic configuration of the **fluorine atom** when it becomes a fluoride ion.

_____ [2]

(b) In each of the tables below there are three statements, **one** of which is correct. Put a tick (✓) beside the correct statement in each table.

(i)

table 1	Tick (✓)
ionic bonds are typical of metal compounds	
ionic bonds are typical of metals	
ionic bonds are typical of non-metal compounds	

[1]

(ii)

table 2	Tick (✓)
most ionic compounds are insoluble in water	
many molecular covalent substances are insoluble in water	
most molecular covalent substances have high melting points	

[1]

(iii)

table 3	Tick (✓)
diatomic means two atoms ionically bonded in a compound	
diatomic means two or more atoms chemically combined	
diatomic means two atoms covalently bonded in a molecule	

[1]

- (c) In the spaces below draw dot and cross diagrams to show how covalent bonding occurs in ammonia, NH_3 .

Your diagrams should show:

- the electronic structures of both of the atoms – show **all** electrons
- the electronic arrangement in an ammonia molecule – only outer electrons are needed
- a label showing a **lone pair** of electrons in the ammonia molecule.

hydrogen atom

nitrogen atom

[2]

ammonia molecule

[3]

[Turn over

(d) Draw a dot and cross diagram to show how covalent bonding occurs in carbon dioxide and label any multiple bonds. Only the outer electrons need to be shown.

20GDW2211

- 5 (a) This question is about relative formula masses, moles and percentage of an element by mass in a compound.

Calculate the relative formula mass of the following compounds:
(relative atomic masses: H = 1, N = 14, C = 12, O = 16, S = 32)

(i) sulfuric acid H_2SO_4

_____ [1]

(ii) ammonium carbonate $(\text{NH}_4)_2\text{CO}_3$

_____ [1]

- (b) Iron(II) sulfate, FeSO_4 , (relative formula mass 152) is an essential body mineral. It helps keep our red blood cells healthy.

Calculate, to one decimal place, the percentage by mass of iron in iron(II) sulfate.

_____ [3]

(c) The relative formula mass of glucose $C_6H_{12}O_6$ is 180.

(i) Calculate the number of moles in 45 g of glucose.

_____ [1]

(ii) What is the percentage composition of carbon, by mass, in a glucose molecule?

Circle the correct answer.

6%

15%

25%

33%

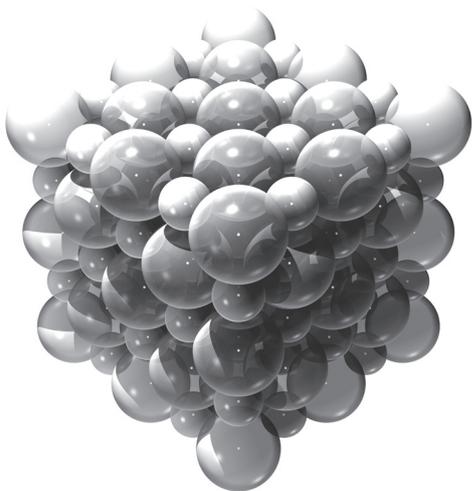

40%

50%

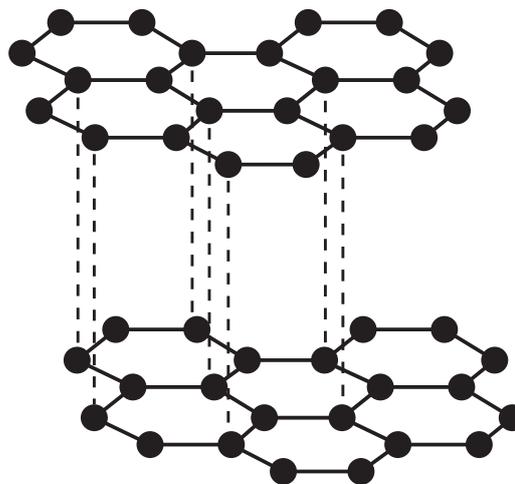

[1]

6 The diagrams below show two giant structures.

structure A

structure B

In this question you will be assessed on your written communication skills including the use of specialist scientific terms.

For **each** of these structures A and B:

- predict the physical properties you would expect them to have with respect to melting points, solubility in water and electrical conductivity.
- name the type of bonding you would expect.
- name a substance which could be represented by the structure and
for structure B **only** give a use for a substance with that structure.

Structure A

Structure B

[6]

20GDW2215

- 7 (a) The symbol equations below describe some reactions of dilute acids used in the laboratory.

Give the **names** and **formulae** for:

alkali A: name _____ formula _____ [2]

base B: name _____ formula _____ [2]

- (b) What is the difference between an alkali and a base?

 _____ [1]

- (c) Both of the reactions in part (a) involve neutralisation.
 Write an ionic equation, including state symbols, for a neutralisation reaction.

 _____ [3]

- (d) (i) Nitric acid is described as a **strong** acid.
 Complete the equation to show the ions formed when nitric acid is dissolved in water.

- (ii) How would you describe the extent to which a strong acid is ionised in water?
 Circle the correct answer

About 50% **100%** **1%** **a random %**

[1]

(iii) The symbol equation below shows the reaction of nitric acid with zinc metal.

(Relative atomic masses H = 1, N = 14, O = 16, Zn = 65)

Calculate the number of grams of zinc that would be needed to produce 37.8 g of zinc nitrate.

Show your working.

_____ [3]

8 The table below gives some information about the noble gases.

noble gas	symbol	relative atomic mass	boiling point/ °C
helium	He	4	-269
neon	Ne	20	-246
argon	Ar	40	-186
krypton	Kr	84	-153
xenon	Xe	131	-108
radon	Rn	222	

(a) What is the trend in boiling points for the noble gases?

_____ [2]

(b) Why does the number of electrons in the outer shell of each atom have nothing to do with this trend?

_____ [1]

(c) What colour is helium?

_____ [1]

(d) (i) Calculate the average change in boiling point from one element to the next as you move down the group.

Show your working.

_____ [3]

(ii) Use your answer to predict the boiling point for radon.

_____ [1]

(e) Give one physical property, other than low boiling point, of the noble gases.

_____ [1]

SYMBOLS OF SELECTED IONS

Positive ions

Name	Symbol
Ammonium	NH_4^+
Chromium(III)	Cr^{3+}
Copper(II)	Cu^{2+}
Iron(II)	Fe^{2+}
Iron(III)	Fe^{3+}
Lead(II)	Pb^{2+}
Silver	Ag^+
Zinc	Zn^{2+}

Negative ions

Name	Symbol
Butanoate	$\text{C}_3\text{H}_7\text{COO}^-$
Carbonate	CO_3^{2-}
Dichromate	$\text{Cr}_2\text{O}_7^{2-}$
Ethanoate	CH_3COO^-
Hydrogencarbonate	HCO_3^-
Hydroxide	OH^-
Methanoate	HCOO^-
Nitrate	NO_3^-
Propanoate	$\text{C}_2\text{H}_5\text{COO}^-$
Sulfate	SO_4^{2-}
Sulfite	SO_3^{2-}

 sheet is authorised for use in the examinations

 SOLUBILITY IN COLD WATER OF COMMON SALTS,
 HYDROXIDES AND OXIDES

Soluble
All sodium, potassium and ammonium salts
All nitrates
Most chlorides, bromides and iodides EXCEPT silver and lead chlorides, bromides and iodides
Most sulfates EXCEPT lead and barium sulfates Calcium sulfate is slightly soluble
Insoluble
Most carbonates EXCEPT sodium, potassium and ammonium carbonates
Most hydroxides EXCEPT sodium, potassium and ammonium hydroxides
Most oxides EXCEPT sodium, potassium and calcium oxides which react with water
