SCHEME**

General Marking Instructions

Introduction

Mark schemes are published to assist teachers and students in their preparation for examinations. Through the mark schemes teachers and students will be able to see what examiners are looking for in response to questions and exactly where the marks have been awarded. The publishing of the mark schemes may help to show that examiners are not concerned about finding out what a student does not know but rather with rewarding students for what they do know.

The Purpose of Mark Schemes

Examination papers are set and revised by teams of examiners and revisers appointed by the Council. The teams of examiners and revisers include experienced teachers who are familiar with the level and standards expected of students in schools and colleges.

The job of the examiners is to set the questions and the mark schemes; and the job of the revisers is to review the questions and mark schemes commenting on a large range of issues about which they must be satisfied before the question papers and mark schemes are finalised.

The questions and the mark schemes are developed in association with each other so that the issues of differentiation and positive achievement can be addressed right from the start. Mark schemes, therefore, are regarded as part of an integral process which begins with the setting of questions and ends with the marking of the examination.

The main purpose of the mark scheme is to provide a uniform basis for the marking process so that all the markers are following exactly the same instructions and making the same judgements in so far as this is possible. Before marking begins a standardising meeting is held where all the markers are briefed using the mark scheme and samples of the students' work in the form of scripts. Consideration is also given at this stage to any comments on the operational papers received from teachers and their organisations. During this meeting, and up to and including the end of the marking, there is provision for amendments to be made to the mark scheme. What is published represents this final form of the mark scheme.

It is important to recognise that in some cases there may well be other correct responses which are equally acceptable to those published: the mark scheme can only cover those responses which emerged in the examination. There may also be instances where certain judgements may have to be left to the experience of the examiner, for example, where there is no absolute correct response – all teachers will be familiar with making such judgements.

		AVAILABLE MARKS
1	(a) bridges – iron plumbing – copper flares – magnesium overhead cables – aluminium 4 correct = [3] 2 or 3 correct = [2] 1 correct = [1]	[3]
	(b) An alloy would be expected to conduct electricity [1] A mixture of copper and zinc could be described as an alloy [1]	[2]
	(c) idea of using a magnet [1] idea that iron will be attracted – sulfur will not implied [1]	[2]
2	(a) D then C then B allow [1] for D then B then C	[2]
	(b) (i) filtrate correctly labelled [1]	
	(ii) residue correctly labelled [1]	[2]
	(c) B	[1]
	(d) spitting of hot solid/risk of getting burnt/clothing catching fire/or other correct [1] wear goggles/stand well back/tuck in clothing/or other correct N.B. safety precaution must link to the hazard or risk [1]	[2]
		7
3	(a) oil [1] reactive [1] dull [1] shiny [1]	[4]
	(b) ignites lilac flame floats idea of movement idea of vigorous/violent reaction gas given off/hydrogen formed dissolves/disappears idea of alkaline solution formed/potassium hydroxide idea of heat being given off forms a ball/melts or any other correct any 4 × [1]	[4]
	(c) corrosive sign	[1]
		9

- 4 (a) Group A – alkali metals **Not** alkaline metals
 Group B – halogens
 Group C – noble gases
 If answers are by Group NUMBER i.e. 1, 7, 0 and all correct, award [1]
 $3 \times [1]$ [3]
- (b) centre part correctly labelled [1]
- (c) mass [1]
- (d) left gaps for undiscovered elements,
 arranged elements in groups/periods
 idea of having elements swapped, e.g. iodine and tellurium
 idea of having no noble gases
 or other correct
 any $2 \times [1]$ [2]

- 5 (a) (i) R, B, B – all needed [1]
- (ii) green [1]
- (iii) idea that it is yellow in all alkali solutions [1]
- (iv) universal [1]
 idea that it is the only one which changes colour at pH 7, e.g. it turns
 green when neutral/at pH 7 [1] [2]
- (b) pH meter or probe [1]
- (c) salt [1] water [1] either order [2]

6 (a)

Atom/ion	Mass number	Number of protons	Number of electrons	Number of neutrons
A	6 [1]	3	3	3
B	27	13	13	14 [1]
C	11	5 [1]	5	6
D	23 [1]	11	10	12
E	35 [1]	17	18	18

- (b) A – Li [1]
 D – Na⁺ [1]
 E – Cl⁻ [1] [3]

AVAILABLE
MARKS

7

8

[5]

8

- 7 (a) six or seven points correctly plotted [2]
four or five points correct [1]
appropriate line through points [1] [3]
- (b) As temperature increases, solubility increases [1]
idea (potassium nitrate) increases more steadily [1]
potassium chloride increases steadily/slightly [1]
Any 2 from 3 [2]
- (c) $22\text{ }^{\circ}\text{C} \pm 0.5\text{ }^{\circ}\text{C}$ [1]
- (d) (i) 68 g/100 g H₂O [1]
- (ii) 68–40 [1] 28 [1] g [1]
Any two from three. Unit dependent on 1st/2nd mark
in (ii) apply ecf, e.g. 65/66 – 39 [1] → 26/27 [1] g [1] [2]

AVAILABLE
MARKS

9

8 **Indicative Content**

Prediction

- High melting point
- Solid
- Conducts electricity when molten/in solution
- Doesn't conduct as solid
- Soluble in water
- Brittle

Explanation

High melting point

- Strong forces of attraction between ions

Electric conductivity

- Ions can carry charge
- Ions free to move in molten/aqueous state
- Ions not free to move in solid state

Response	Mark
Candidates must use appropriate scientific terms throughout to describe the physical properties, using 7 or more of the points in the indicative content, in a logical sequence. They use good spelling, punctuation and grammar and the form and style are of a high standard.	[5]–[6]
Candidates use 4–6 points from the indicative content to describe the physical properties in a logical sequence using some scientific terms. They use satisfactory spelling, punctuation and grammar and the form and style are of a satisfactory standard.	[3]–[4]
Candidates use 1–3 of the points from the indicative content to describe the physical properties. However these are not presented in a logical sequence. They use limited spelling, punctuation and grammar and make little use of scientific terms. The form and style are of a limited standard.	[1]–[2]
Response not worthy of credit.	[0]

[6]

6

9 (a)

Metal carbonate	Acid used	Cation in salt	Anion in salt	Formula of salt produced
calcium	hydrochloric	Ca ²⁺	Cl ⁻	CaCl ₂
sodium	sulfuric	Na ⁺	SO ₄ ²⁻	Na₂SO₄
copper	sulfuric	Cu ²⁺	SO₄²⁻	CuSO ₄
magnesium	nitric	Mg²⁺	NO₃⁻	Mg(NO ₃) ₂

7 correct = [4]; 5–6 correct = [3]; 3–4 correct = [2]; 2 correct = [1] [4]

(b) metal carbonate – green [1]
salt solution – blue [1] [2](c) carbon dioxide [1]
limewater [1] turns milky [1] [3]**Total**
