2011

Centre Number

71

Candidate Number

Science: Double Award (Non-Modular)

Paper 1
Higher Tier

[G8404]

THURSDAY 19 MAY, AFTERNOON

TIME

1 hour 45 minutes.

INSTRUCTIONS TO CANDIDATES

Write your Centre Number and Candidate Number in the spaces provided at the top of this page.

Write your answers in the spaces provided in this question paper.
Answer **all twelve** questions.

INFORMATION FOR CANDIDATES

The total mark for this paper is 120.

Quality of written communication will be assessed in question **6(b)**.

Figures in brackets printed down the right-hand side of pages indicate the marks awarded to each question or part question.

Details of calculations should be shown.

Units must be stated in numerical answers where appropriate.

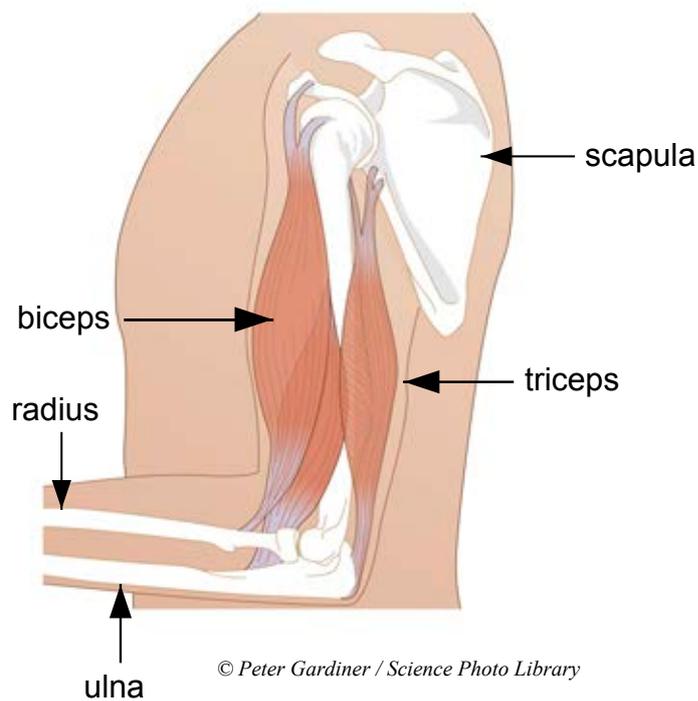

For Examiner's
use only

- 1 The diagram shows the bones and the biceps and triceps muscles of the arm.

Use the diagram and your knowledge to answer the following questions.

- (a) Name the **two** bones that the biceps muscle is attached to.

_____ and _____ [2]

- (b) Which muscle must be contracted in order to raise the lower arm?

_____ [1]

- (c) What type of cell carries the electrical impulse to the muscle to make it contract?

_____ [1]

Examiner Only	
Marks	Remark

2 A student carried out food tests on three solutions A, B and C.

The results are shown in the table.

Solution	Iodine test	Benedict's test	Biuret test	DCPIP
A	✓	✗	✗	✗
B	✗	✗	✓	✗
C	✗	✓	✗	✓

A tick ✓ indicates a positive result and an ✗ indicates a negative result for the test.

(a) Using the information in the table state what types of food were present in the different solutions.

Solution A _____

Solution B _____

Solution C _____ and _____ [3]

(b) Which of these food tests requires heating?

_____ [1]

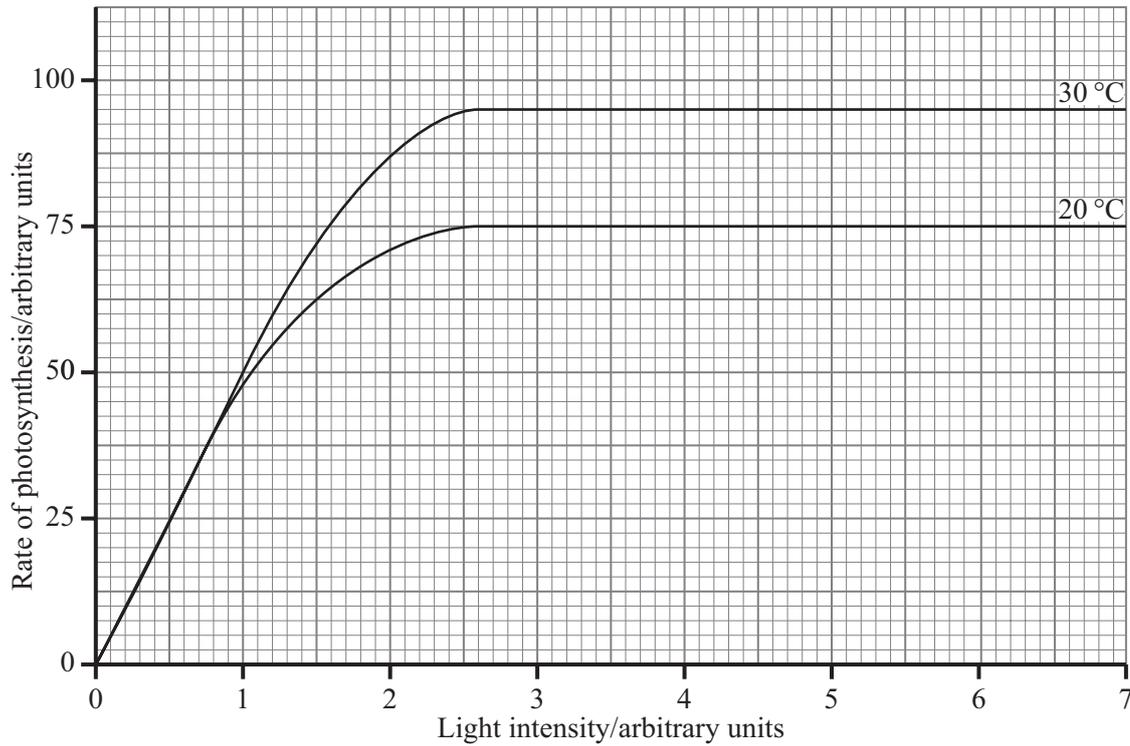

(c) What colour change is seen with a positive result for the Biuret test?

From _____ to _____ [1]

Examiner Only

Marks Remark

- 3 The graph shows the effect of light intensity on the rate of photosynthesis at two different temperatures. The carbon dioxide concentration is 0.03% at both temperatures.

- (a) Use the information in the graph and your knowledge to suggest the light intensity and temperature that a market gardener should have in his greenhouse to maximise his profit. Explain your answer.

Light intensity _____ arbitrary units

Temperature _____ °C

Explanation _____

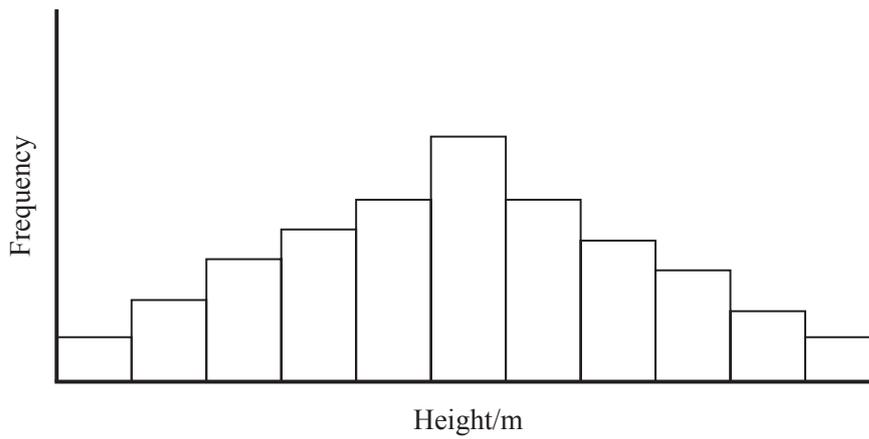

_____ [3]

- (b) Explain why temperatures above 50°C would be a problem when growing plants in a greenhouse. Suggest how a grower might regulate temperatures in a greenhouse.

_____ [2]

Examiner Only	
Marks	Remark

- 4 The graph shows how height in a population of animals varies. Height is an example of continuous variation.

- (a) State the two causes of height variation in this population.

_____ and _____ [2]

- (b) Suggest the effect on the average height of future populations if the smallest animals couldn't compete for food.

_____ [1]

Examiner Only	
Marks	Remark

5 Organisms of the same species show variation and this allows natural selection.

- (a) Suggest **one** adaptation a plant might possess that would enable it to survive better in low light intensity than other plants of the same species.

_____ [1]

- (b) How would this adaptation be passed on?

_____ [1]

- (c) Explain why an adaptation that does **not** give a plant an advantage may not be passed on.

_____ [2]

Examiner Only

Marks Remark

- 6 The table shows the mineral level (nitrates and phosphates) and depth of light penetration in an unpolluted lake, a polluted lake and Lough Neagh.

Lake	Mineral level/arbitrary units per litre	Depth of light penetration/m
Unpolluted	10–34	6
Polluted (eutrophic)	35–100	3
Lough Neagh	165	1.1

© Crown Copyright

Use the data in the table and your knowledge to answer the following questions.

- (a) Compare the mineral level in Lough Neagh with the other lakes.

_____ [1]

- (b) The minerals are used by the water plants for growth. Why is light only able to penetrate 1.1 m in Lough Neagh?
Explain how this can result in death of fish in the lough.

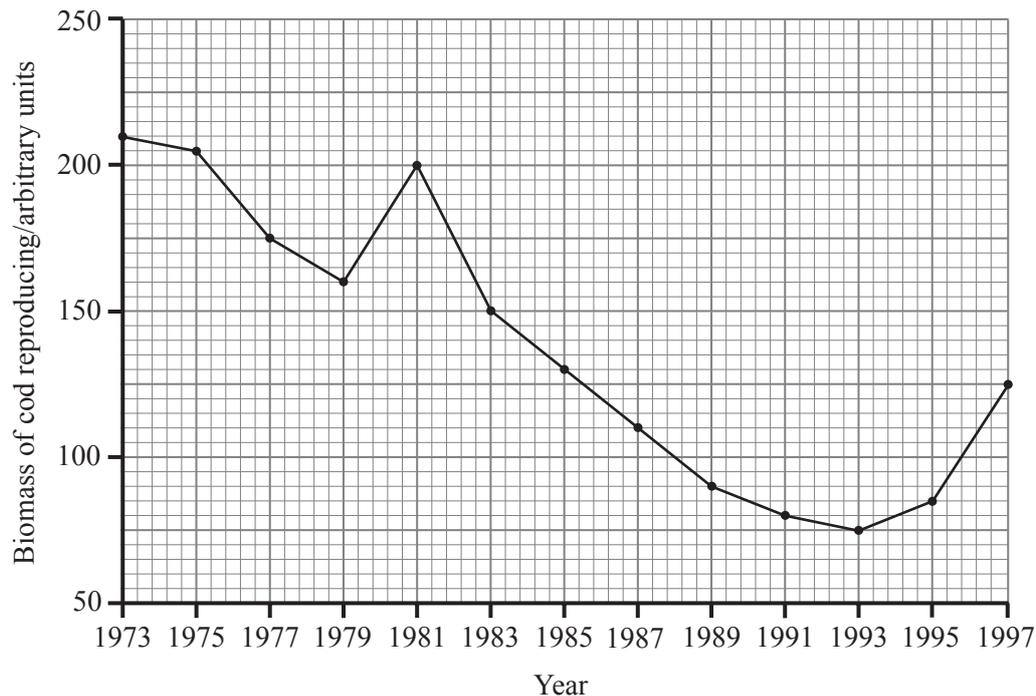

The quality of written communication will be assessed in this question.

_____ [5]

Quality of written communication [2]

Examiner Only	
Marks	Remark

- 7 The graph shows the biomass of cod reproducing in the North Sea over a 24 year period.

Use the graph and your knowledge to answer the following questions.

- (a) How many times greater was the biomass of cod reproducing in 1983 compared to 1993?

_____ times [2]

The biomass of cod reproducing in the North Sea started to rise in 1993 after the introduction of new regulations by the European Commission. One regulation made the fishing industry use increased mesh size in fishing nets.

- (b) Explain how this regulation helped to increase the biomass of cod reproducing.

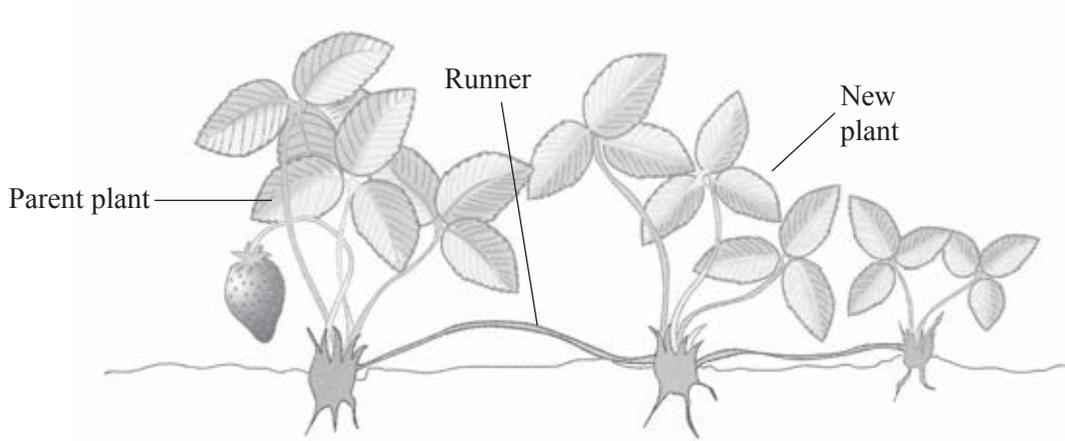

_____ [2]

- (c) Suggest **two** other regulations that could have been imposed by the European Commission to help increase cod stocks.

1. _____
2. _____ [2]

Examiner Only	
Marks	Remark

8 The diagram shows a strawberry plant with runners.

© GCSE Biology for CCEA by R McIlwaine & J Napier, published by Hodder Education, 2003.
ISBN 9780340858257. Reproduced by permission of Hodder Education

(a) Name this type of reproduction.

_____ [1]

(b) Give **one** disadvantage of this type of reproduction.

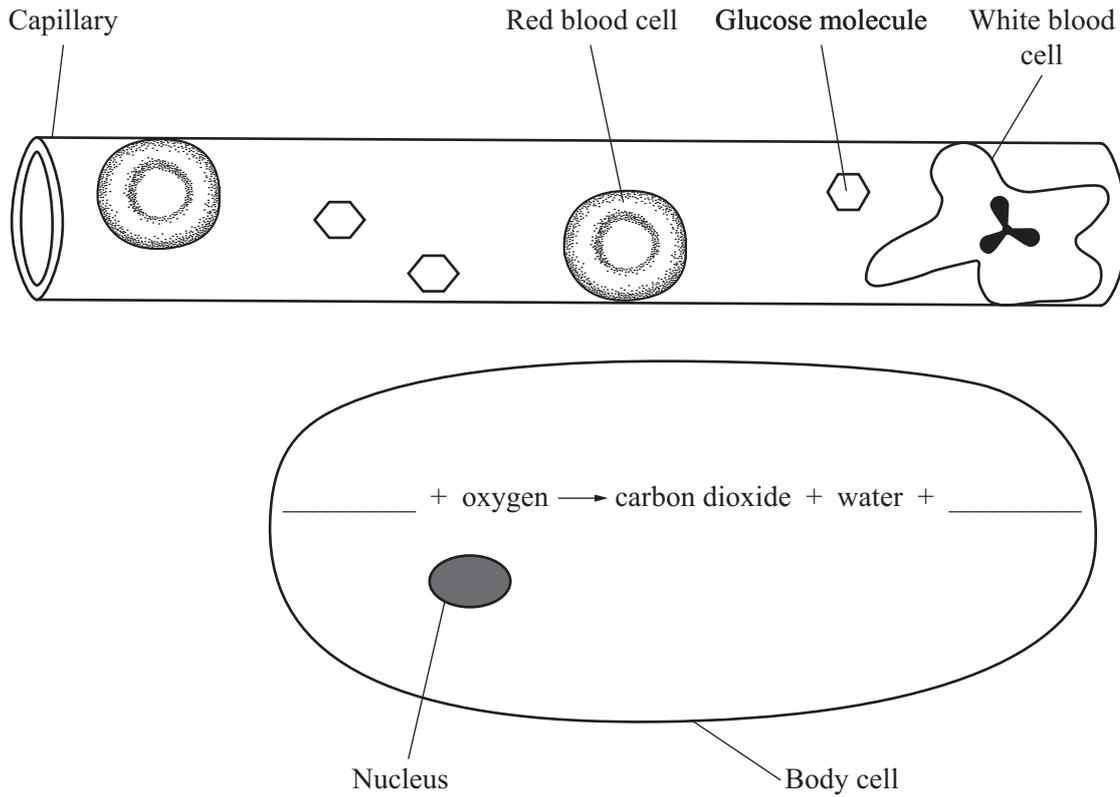

_____ [1]

(c) If a grower had a strawberry plant that produced tasty fruit, what **two other** methods could she use to increase her stock of this plant?

_____ [2]

Examiner Only	
Marks	Remark

9 (a) The diagram shows a blood capillary and a body cell.

(i) Complete the word equation for respiration in the body cell. [2]

(ii) How is oxygen carried in the blood capillary?

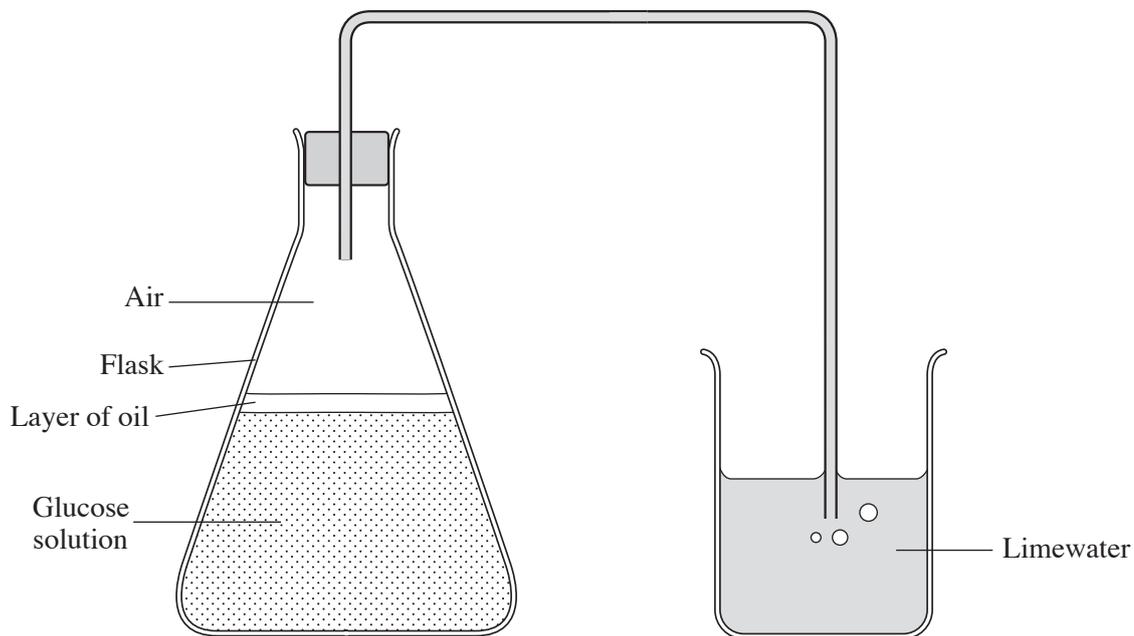

_____ [1]

(iii) What happens to the carbon dioxide immediately after it has been produced in the body cell?

_____ [1]

Examiner Only	
Marks	Remark

- (b) An investigation was carried out to show anaerobic respiration of a microorganism. The microorganism was added to the glucose solution, which had been boiled, then cooled. The apparatus used is shown in the diagram.

- (i) Name the microorganism normally used in this investigation.

_____ [1]

- (ii) Why was the glucose solution

boiled _____

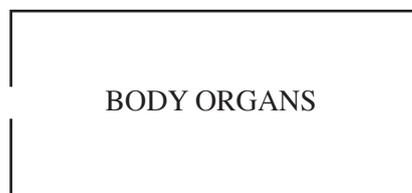

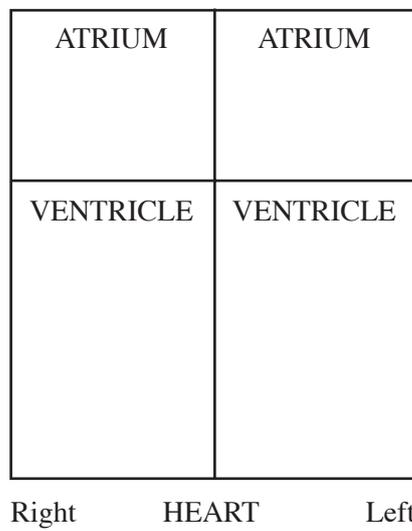

then cooled? _____ [2]

- (iii) What would you expect to happen to the limewater?

_____ [1]

Examiner Only	
Marks	Remark

(c) The diagram shows the lungs, heart and body organs of a mammal.

Examiner Only	
Marks	Remark

(i) Complete the diagram by drawing four blood vessels to show the circulation of blood from:

- the body organs to the heart – label as A
- the heart to the lungs and back – label both as B
- heart to the body organs – label as C.

[4]

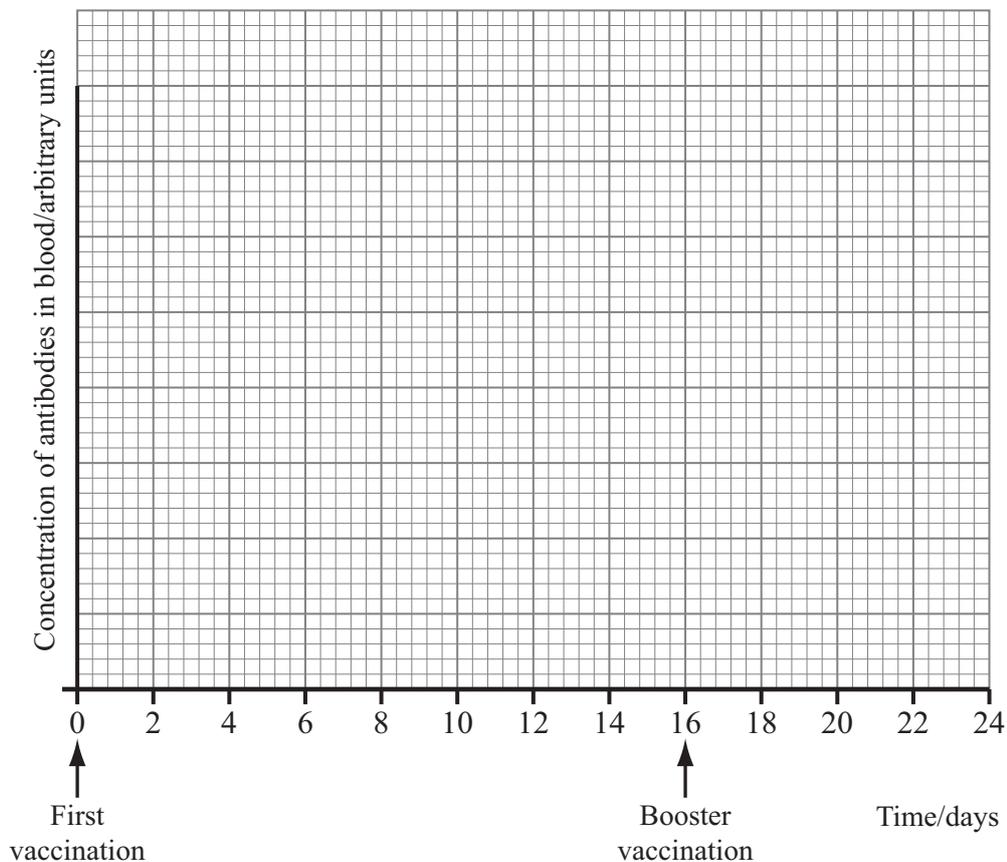

(ii) Name the largest artery in the body. _____ [1]

(iii) Explain why the left ventricle has the thickest muscular wall in the heart.

_____ [1]

(d) Some white blood cells in the body provide immunity by producing antibodies. Most vaccinations introduce a modified disease-causing organism into the body.

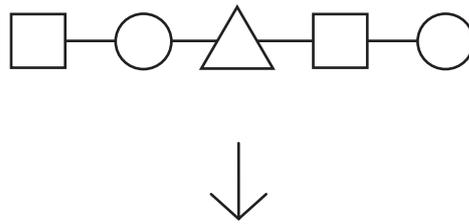

Draw a line to show what happens to the concentration of antibodies following a vaccination and a subsequent booster vaccination.

[5]

Examiner Only	
Marks	Remark

- 10 (a) The diagram shows how amino acids link together to form a protein molecule.

- (i) Complete the diagram above to show what happens to this protein molecule during digestion in the stomach and small intestine. [2]

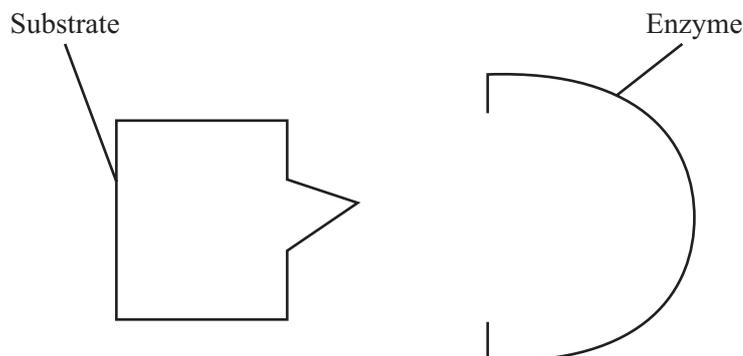

- (ii) The amino acids will then be absorbed into the blood. Name the process involved.

_____ [1]

- (iii) Give **two** ways the small intestine is adapted for the process of absorption.

1. _____
2. _____ [2]

- (b) The diagram shows the shape of a substrate molecule and part of an enzyme molecule.

- (i) Complete the diagram of the enzyme molecule that would break down this substrate molecule. [1]

Examiner Only	
Marks	Remark

- (ii) Explain why this enzyme molecule would not break down a different substrate molecule.

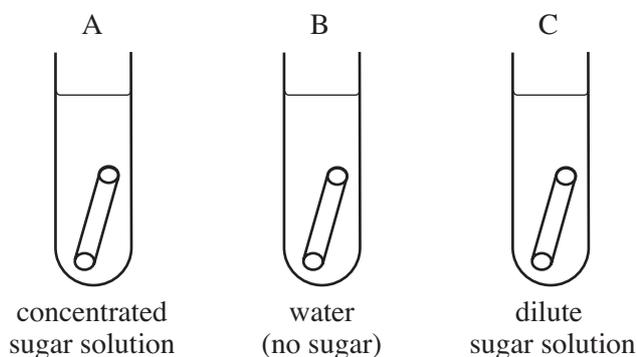

_____ [1]

- (iii) Why does increasing temperature from 20 °C to 30 °C increase the rate of an enzyme-catalysed reaction?

_____ [1]

Examiner Only	
Marks	Remark

- (c) An investigation into osmosis was carried out with potato cylinders. Three test tubes A, B and C were set up, each with a potato cylinder of 50 mm length and a different concentration of sugar solution. The potato cylinders were left for several hours, removed and their final length recorded. The results are given in the table.

Test tube	Solution	Length of potato cylinder at the start/mm	Length of potato cylinder at the end/mm
A	Concentrated sugar solution	50	48
B	Water (no sugar)	50	53
C	Dilute sugar solution	50	50

- (i) Why was it **not** necessary to work out the percentage change in length in this experiment?

_____ [1]

- (ii) Give **one** factor that should have been kept constant in this experiment.

_____ [1]

- (iii) Explain the results for the potato cylinder in test tube A.

_____ [2]

Examiner Only

Marks Remark

- (iv) Draw a diagram of one potato **cell** from the potato cylinder in test tube A as it would appear at the end of the investigation.

Label the cell membrane, cell wall and vacuole in your diagram.

[4]

- (v) Suggest what would happen if red blood cells are placed in water. Explain your answer.

_____ [2]

- (d) (i) Name the process in plant root hair cells that involves the transport of minerals from the soil.

_____ [1]

- (ii) Explain why energy is needed for this process.

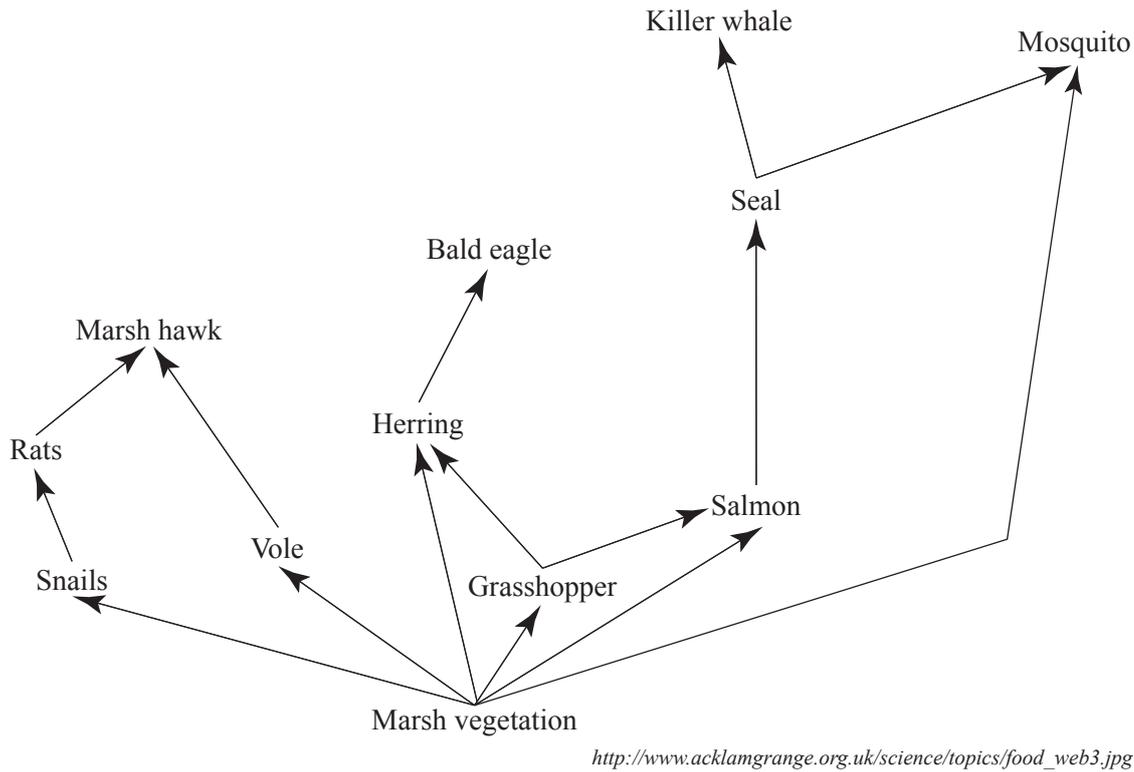

_____ [1]

- (iii) Waterlogged soil contains little oxygen. Explain how the uptake of minerals is affected if the plant is grown in waterlogged soil.

_____ [2]

Examiner Only	
Marks	Remark

11 (a) The diagram shows a food web.

(i) At what two trophic levels is the herring feeding?

_____ and _____ [1]

(ii) Draw the food chain from the food web where the bald eagle is acting as a tertiary consumer.

[2]

Examiner Only	
Marks	Remark

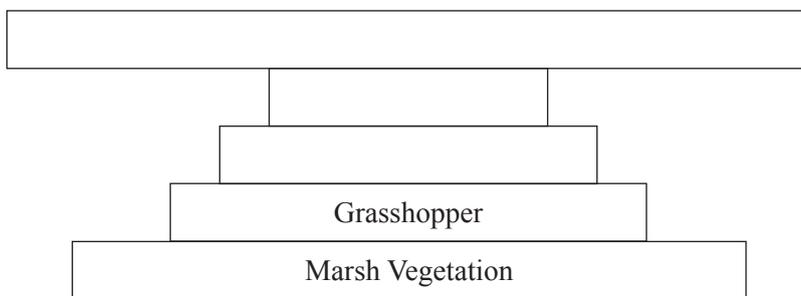

(iii) Suggest why the population of salmon might increase if the herring population was wiped out by overfishing.

_____ [1]

(iv) Explain why the marsh hawk would gain more energy from eating voles than from eating rats.

 _____ [2]

A pyramid of numbers for one of the food chains in the food web is shown below.

(v) Complete the labels on the pyramid with the correct name of the organisms in the food chain. [2]

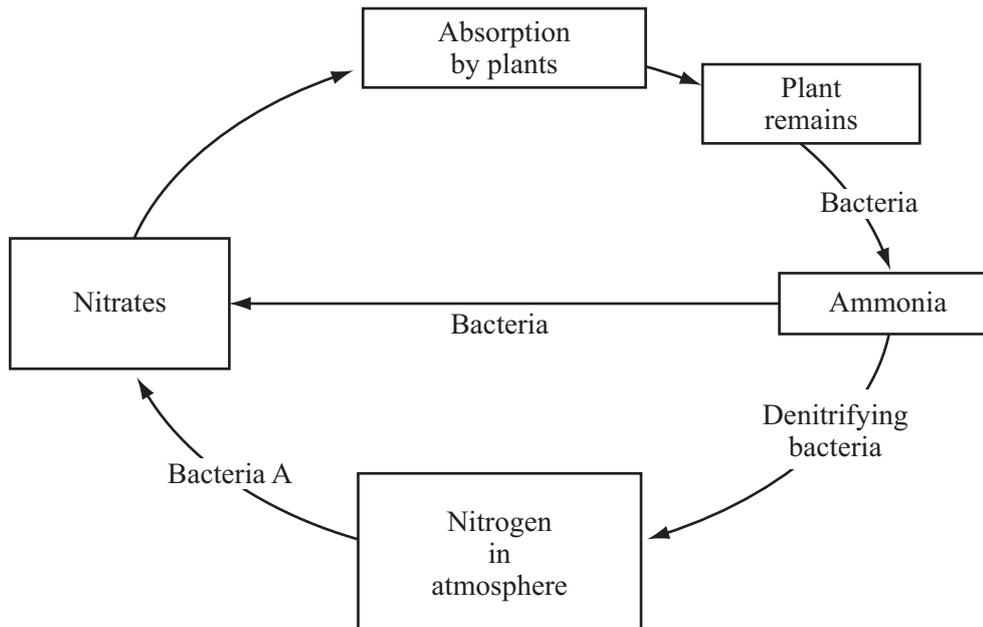

(vi) On the grid draw a pyramid of biomass from the pyramid of numbers above.

Beside each level write the name of the organism.

[4]

Examiner Only	
Marks	Remark

(b) The diagram shows part of the nitrogen cycle.

© Visalia USD

Use the diagram and your knowledge to answer the following questions.

(i) Name bacteria A.

_____ [1]

(ii) Explain why harvesting a crop causes a decrease in the nitrate content of the soil.

_____ [1]

(iii) Suggest and explain **two** methods, other than applying fertiliser, by which a farmer could increase the nitrate content of the soil.

Method 1 _____

Explanation _____

Method 2 _____

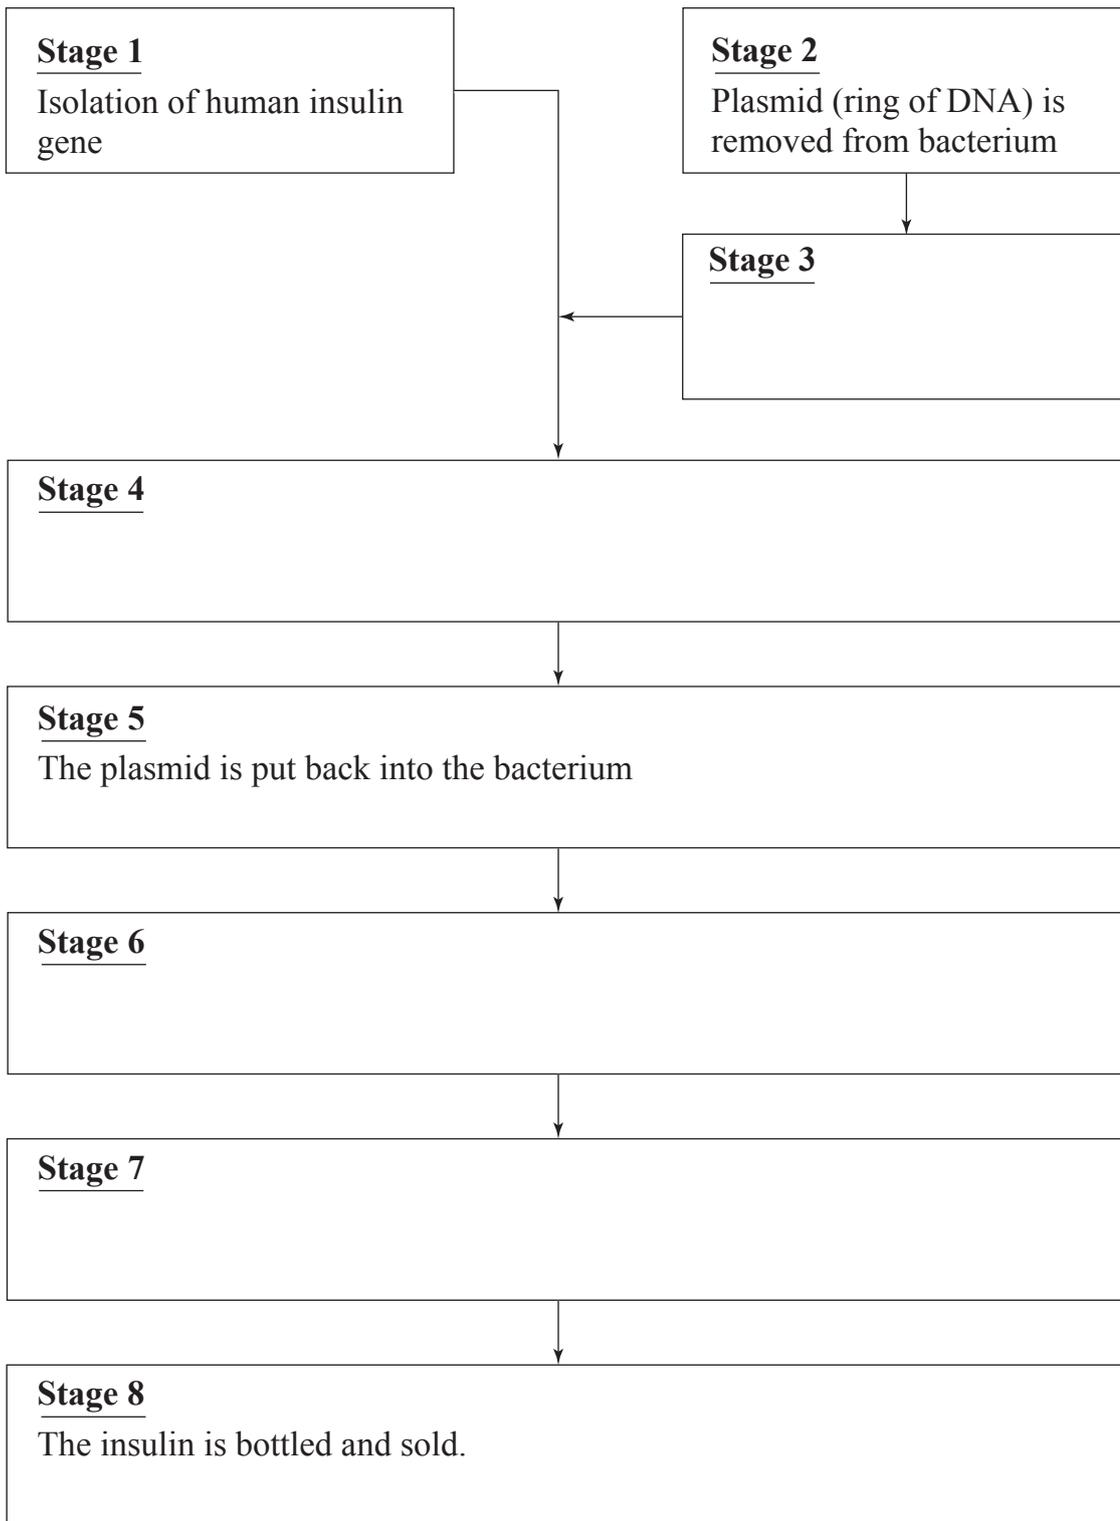

Explanation _____

_____ [4]

Examiner Only

Marks Remark

The flow diagram shows some stages in the production of human insulin by genetic engineering.

(iii) Complete the boxes for stages 3, 4, 6 and 7. [4]

Examiner Only	
Marks	Remark

(iv) State **one** advantage of making human insulin using genetic engineering.

_____ [1]

(d) (i) Name **one** of the two scientists who initially used **x-ray diffraction** to work out the shape of DNA.

_____ [1]

(ii) This knowledge was then used by other scientists to build a 3D model of DNA. Circle the shape below which best shows the structure of DNA.
