

Mathematics
Higher level
Paper 2

Wednesday 13 May 2015 (afternoon)

Candidate session number

2 hours

--	--	--	--	--	--	--	--	--	--

Instructions to candidates

- Write your session number in the boxes above.
- Do not open this examination paper until instructed to do so.
- A graphic display calculator is required for this paper.
- Section A: answer all questions in the boxes provided.
- Section B: answer all questions in the answer booklet provided. Fill in your session number on the front of the answer booklet, and attach it to this examination paper and your cover sheet using the tag provided.
- Unless otherwise stated in the question, all numerical answers should be given exactly or correct to three significant figures.
- A clean copy of the **mathematics HL and further mathematics HL formula booklet** is required for this paper.
- The maximum mark for this examination paper is **[120 marks]**.

Full marks are not necessarily awarded for a correct answer with no working. Answers must be supported by working and/or explanations. In particular, solutions found from a graphic display calculator should be supported by suitable working. For example, if graphs are used to find a solution, you should sketch these as part of your answer. Where an answer is incorrect, some marks may be given for a correct method, provided this is shown by written working. You are therefore advised to show all working.

Section A

Answer **all** questions in the boxes provided. Working may be continued below the lines if necessary.

1. [Maximum mark: 4]

The region R is enclosed by the graph of $y = e^{-x^2}$, the x -axis and the lines $x = -1$ and $x = 1$. Find the volume of the solid of revolution that is formed when R is rotated through 2π about the x -axis.

2. [Maximum mark: 4]

The finishing times in a marathon race follow a normal distribution with mean 210 minutes and standard deviation 22 minutes.

(a) Find the probability that a runner finishes the race in under three hours. [2]

The fastest 90% of the finishers receive a certificate.

(b) Find the time, below which a competitor has to complete the race, in order to gain a certificate. [2]

3. [Maximum mark: 5]

A mosaic is going to be created by randomly selecting 1000 small tiles, each of which is either black or white. The probability that a tile is white is 0.1. Let the random variable W be the number of white tiles.

- (a) State the distribution of W , including the values of any parameters. [2]
- (b) Write down the mean of W . [1]
- (c) Find $P(W > 89)$. [2]

5. [Maximum mark: 5]

A bicycle inner tube can be considered as a joined up cylinder of fixed length 200 cm and radius r cm. The radius r increases as the inner tube is pumped up. Air is being pumped into the inner tube so that the volume of air in the tube increases at a constant rate of $30 \text{ cm}^3 \text{ s}^{-1}$. Find the rate at which the radius of the inner tube is increasing when $r = 2$ cm.

7. [Maximum mark: 7]

The random variable X follows a Poisson distribution with mean $m \neq 0$.

(a) Given that $2P(X = 4) = P(X = 5)$, show that $m = 10$. [3]

(b) Given that $X \leq 11$, find the probability that $X = 6$. [4]

8. [Maximum mark: 8]

Let $\mathbf{v} = \begin{pmatrix} 2 \\ 3 \\ 5 \end{pmatrix}$ and $\mathbf{w} = \begin{pmatrix} 4 \\ \lambda \\ 10 \end{pmatrix}$.

- (a) Find the value of λ for \mathbf{v} and \mathbf{w} to be parallel. [2]
- (b) Find the value of λ for \mathbf{v} and \mathbf{w} to be perpendicular. [2]
- (c) Find the two values of λ if the angle between \mathbf{v} and \mathbf{w} is 10° . [4]

10. [Maximum mark: 10]

A function f is defined by $f(x) = (x+1)(x-1)(x-5)$, $x \in \mathbb{R}$.

(a) Find the values of x for which $f(x) < |f(x)|$. [3]

A function g is defined by $g(x) = x^2 + x - 6$, $x \in \mathbb{R}$.

(b) Find the values of x for which $g(x) < \frac{1}{g(x)}$. [7]

Do **not** write solutions on this page.

Section B

Answer **all** questions in the answer booklet provided. Please start each question on a new page.

11. [Maximum mark: 20]

The probability density function of a continuous random variable X is given by

$$f(x) = \begin{cases} 0, & x < 0 \\ \frac{\sin x}{4}, & 0 \leq x \leq \pi \\ a(x - \pi), & \pi < x \leq 2\pi \\ 0, & 2\pi < x \end{cases}$$

- (a) Sketch the graph of $y = f(x)$. [2]
- (b) Find $P(X \leq \pi)$. [2]
- (c) Show that $a = \frac{1}{\pi^2}$. [3]
- (d) Write down the median of X . [1]
- (e) Calculate the mean of X . [3]
- (f) Calculate the variance of X . [3]
- (g) Find $P\left(\frac{\pi}{2} \leq X \leq \frac{3\pi}{2}\right)$. [2]
- (h) Given that $\frac{\pi}{2} \leq X \leq \frac{3\pi}{2}$ find the probability that $\pi \leq X \leq 2\pi$. [4]

Do **not** write solutions on this page.

12. [Maximum mark: 19]

(a) (i) Use the binomial theorem to expand $(\cos \theta + i \sin \theta)^5$.

(ii) Hence use De Moivre's theorem to prove

$$\sin 5\theta = 5\cos^4 \theta \sin \theta - 10\cos^2 \theta \sin^3 \theta + \sin^5 \theta.$$

(iii) State a similar expression for $\cos 5\theta$ in terms of $\cos \theta$ and $\sin \theta$. [6]

Let $z = r(\cos \alpha + i \sin \alpha)$, where α is measured in degrees, be the solution of $z^5 - 1 = 0$ which has the smallest positive argument.

(b) Find the value of r and the value of α . [4]

(c) Using (a) (ii) and your answer from (b) show that $16\sin^4 \alpha - 20\sin^2 \alpha + 5 = 0$. [4]

(d) Hence express $\sin 72^\circ$ in the form $\frac{\sqrt{a+b\sqrt{c}}}{d}$ where $a, b, c, d \in \mathbb{Z}$. [5]

Do **not** write solutions on this page.

13. [Maximum mark: 21]

Richard, a marine soldier, steps out of a stationary helicopter, 1000 m above the ground, at time $t = 0$. Let his height, in metres, above the ground be given by $s(t)$. For the first 10 seconds his velocity, $v(t) \text{ ms}^{-1}$, is given by $v(t) = -10t$.

(a) (i) Find his acceleration $a(t)$ for $t < 10$.

(ii) Calculate $v(10)$.

(iii) Show that $s(10) = 500$.

[6]

At $t = 10$ his parachute opens and his acceleration $a(t)$ is subsequently given by $a(t) = -10 - 5v$, $t \geq 10$.

(b) Given that $\frac{dt}{dv} = \frac{1}{\frac{dv}{dt}}$, write down $\frac{dt}{dv}$ in terms of v .

[1]

You are told that Richard's acceleration, $a(t) = -10 - 5v$, is always positive, for $t \geq 10$.

(c) Hence show that $t = 10 + \frac{1}{5} \ln\left(\frac{98}{-2-v}\right)$.

[5]

(d) Hence find an expression for the velocity, v , for $t \geq 10$.

[2]

(e) Find an expression for his height, s , above the ground for $t \geq 10$.

[5]

(f) Find the value of t when Richard lands on the ground.

[2]
