**READ INSTRUCTIONS OVERLEAF**

## **INSTRUCTIONS**

**Use black ink.**

**Write your answer to each question in the space provided. If you need extra space use the lined pages at the end of this booklet. The question numbers must be clearly shown.**

**Answer ALL the questions.**

## **INFORMATION**

**The total mark for this paper is 80.**

**The marks for each question are shown in brackets [ ].**

**Quality of written communication will be assessed in questions marked with an asterisk (\*).**

## **ADVICE**

**Read each question carefully before you start your answer.**

**BLANK PAGE**

1 A computer system has a 2.5 GHz processor and 5 GB of RAM.

(a) Complete the paragraph about memory by writing the missing terms in the spaces, using the words provided. [8]

cache	data	hard drive
instructions	changed	closing
operator	primary	random
read	secondary	start-up
translator	memory stick	virtual
write		

ROM stands for \_\_\_\_\_ only memory.

This stores the \_\_\_\_\_ instructions

for a computer and cannot be \_\_\_\_\_ .

RAM stands for \_\_\_\_\_ access memory.

This stores the instructions and \_\_\_\_\_

that are currently being used. If the computer does

not have enough RAM to run a process it can

make use of \_\_\_\_\_ memory.

RAM and ROM are both examples of

\_\_\_\_\_ memory. Memory located

close to the processor that allows faster access

than from RAM is called \_\_\_\_\_

memory.

- 5 A program is being created to convert the data capacity of a storage device into a different measure.

The function, `calculate()`, takes the measurement (e.g. gigabytes) and the number (e.g. 2) as two parameters. It then returns the value in bits. The function returns `-1` if an invalid measurement was entered.

Complete the function `calculate` [6]

```

function calculate(_____, number)

    if measurement == "gigabytes" then

        value = number * 1024 * 1024 * 1024 * 8

        elseif measurement == "_____" then

            value = number * 1024 * 1024 * 8

            elseif measurement == "_____" then

                value = number * 1024 * 8

            elseif measure == "bytes" then

                value = number * _____

            else

                _____

            endif

        return _____
