## H081/02 Geographical debates

### Sample Question Paper

## Date – Morning/Afternoon

Time allowed: 1 hour 30 minutes

**You must have:**

- the Resource Booklet
- the OCR 12-page Answer Booklet (OCR 12 sent with general stationary)

**You may use:**

- a ruler (cm/mm)
- a piece of string
- a scientific or graphical calculator

\* o o o o o o \*

**INSTRUCTIONS**

- Use black ink. You may use an HB pencil for graphs and diagrams.
- Section A: Choose **one** topic and answer **all** parts of the question in the topic.
- Section B – Synoptic questions: Choose **one** topic and answer **all** parts of the question in the topic. You must use your knowledge and understanding from across the course of study to answer these questions.
- Section C: Choose **one** topic and answer **one** question in the topic.
- Write your answer to each question in the Answer Booklet.
- Additional paper may be used if required but you must clearly show your candidate number, centre number and question number(s).
- Do **not** write in the bar codes.
- The separate Resource Booklet will be found inside this document.

**INFORMATION**

- The total mark for this paper is **68**.
- The marks for each question are shown in brackets [ ].
- Quality of extended responses will be assessed in questions marked with an asterisk (\*).
- This document consists of **12** pages.

2  
Section A

Choose **one** topic and answer **all** parts of the question in the topic.

**Topic 2.1 Climate Change**

- 1 (a) Explain how ice cores are used to reconstruct past climate.

[4]

- (b) Suggest why **one** EDC's greenhouse gas emissions have changed over time.

[6]

- (c) Study **Table 1**, which shows carbon dioxide emissions from fossil fuels by country (2013).

Country	Brazil	China	Chile	India	Iran	Germany	Japan	Russian Federation	South Africa	United Kingdom	USA
Emissions*	482	9977	89	2407	611	759	1246	1812	448	462	5233

\*Carbon dioxide emissions in metric tonnes (MtCO<sub>2</sub>)

**Table 1 Carbon dioxide emissions from fossil fuels by country (2013)**

- (i) Using the carbon dioxide emissions data above, calculate the interquartile range. You must show your working.

[4]

- (ii) Using evidence from the table above, analyse the contrasts in carbon dioxide emissions from fossil fuels.

[6]

- (d) 'Oceans are the best indicator of a warming world.' How far do you agree with this statement?

[12]

## Topic 2.2 Disease Dilemmas

- 2 (a) Explain disease diffusion using the Hägerstrand model.

[4]

- (b) Suggest why **one** country experiencing air pollution has seen incidences of cancer change over time.

[6]

- (c) Study **Table 2**, which shows tuberculosis incidence for 2015 (in thousands).

Country	Bangladesh	Brazil	China	India	Kenya	South Africa	Thailand	Uganda	Tanzania	Vietnam	Zimbabwe
Incidence	360	90	930	2200	110	450	120	61	170	130	42

(WHO dataset 2015)

**Table 2 Tuberculosis incidence for 2015 (in thousands)**

- (i) Using the tuberculosis incidence data above, calculate the interquartile range. You must show your working.

[4]

- (ii) Using evidence from the table above, analyse the contrasts in tuberculosis incidence.

[6]

- (d) 'Affluence is one of the main causes of noncommunicable disease.' How far do you agree with this statement?

[12]

### Topic 2.3 Exploring Oceans

- 3 (a) Explain the vertical variations in ocean water salinity.

[4]

- (b) Suggest why the management of **one** oil spill can be environmentally challenging.

[6]

- (c) Study **Table 3**, which shows weight (lbs) of plastic collected during the 2013 ocean clean up

Country	Argentina	Australia	Bangladesh	Brazil	Canada	Egypt	Germany	India	Japan	Kuwait	Malaysia
Weight of plastic	8,018	242	2,311	70,036	199,557	368	1,344	233,648	65,315	44	8,142

\*Pounds (lbs) of plastic collected

**Table 3 Weight (lbs) of plastic collected during the 2013 ocean clean up**

- (i) Using the weight of plastic data above, calculate the interquartile range. You must show your working.

[4]

- (ii) Using evidence from the table above, analyse the contrasts in weight of plastic collected.

[6]

- (d) 'Oceans present hazardous obstacles to human activities.' How far do you agree with this statement?

[12]

**Topic 2.4 Future of Food**

- 4 (a) Explain the physical conditions required for growing food.

[4]

- (b) Suggest why **one** indigenous group's food security can change over time.

[6]

- (c) Study **Table 4**, which shows Global Food Security Index (GFSI) scores for 2015.

Country	Botswana	Brazil	Canada	Chad	China	Ghana	Kenya	Peru	Philippines	Singapore	United Kingdom
<b>GFSI * (2015)</b>	63.1	67.4	84.2	27.9	64.2	46.1	41.2	58.6	49.4	88.2	81.6

*\* (Score 0-100 with 100 as the most favourable)*

**Table 4 Global Food Security Index (GFSI) scores for 2015.**

- (i) Using the Global Food Security Index data above, calculate the interquartile range. You must show your working.

[4]

- (ii) Using evidence from the table above, analyse the contrasts in the Global Food Security Index.

[6]

- (d) 'Physical factors create the greatest risks to food security.' How far do you agree with this statement?

[12]

## Topic 2.5 Hazardous Earth

- 5 (a) Explain how fossil records can be used as evidence of continental drift and plate tectonics theory.

[4]

- (b) Suggest why people experience varying impacts resulting from **one** volcanic eruption.

[6]

- (c) Study **Table 5**, which shows sulphur dioxide gas emission rates for Kilauea volcano (East Rift Zone), Hawaii.

Year	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010
Gas emission rate *	1570	1580	1380	1420	1230	2240	2010	1660	2219	1131	504

*\*Daily average gas emission in metric tonne (1000kg)/year, USGS*

**Table 5 Sulphur dioxide gas emission rates for Kilauea volcano (East Rift Zone), Hawaii.**

- (i) Using the sulphur dioxide gas emissions data above, calculate the interquartile range. You must show your working.

[4]

- (ii) Using evidence from the table above, analyse the contrasts in the sulphur dioxide gas emission rates.

[6]

- (d) 'People have to live in tectonically active locations.' How far do you agree with this statement?

[12]

**Section B – Synoptic questions**

Choose **one** topic and answer **all** parts of the question in the topic. You must use your knowledge and understanding from across the course of study to answer these questions.

**Topic 2.1 Climate Change**

- 6 (a) With reference to **Fig. 1**, suggest how climate change influences geomorphic processes in landscape systems. [8]
- (b) Examine how climate change impacts human use of landscape systems. [8]

**Topic 2.2 Disease Dilemmas**

- 7 (a) With reference to **Fig. 2**, suggest how responses to disease are influenced by landscape systems. [8]
- (b) Examine how far the same physical factors influence disease outbreaks and landscape systems. [8]

**Topic 2.3 Exploring Oceans**

- 8 (a) With reference to **Fig. 3**, suggest how clean ocean waters influence a sense of place identity. [8]
- (b) Examine how living in an island community affects people's perception of place. [8]

**Topic 2.4 Future of Food**

- 9 (a) With reference to **Fig. 4**, suggest how the globalisation of the food industry influences place identity. [8]
- (b) Examine how food security can impact social inequality. [8]

**Topic 2.5 Hazardous Earth**

- 10 (a) With reference to **Fig. 5**, suggest how living in tectonically active areas influences place profiles. [8]
- (b) Examine how volcanic eruptions can influence people's emotional attachment to a place. [8]

8  
Section C

Choose **one** topic and answer **one** question in the topic.

**Topic 2.1 Climate Change**

- 11\* 'There is considerable doubt that the world has warmed steadily since the late nineteenth century.'  
How far do you agree with this statement?

[20]

Or

- 12\* Examine how **successful** international organisations have been in dealing with climate change.

[20]

**Topic 2.2 Disease Dilemmas**

- 13\* Examine the view that communicable diseases are dealt with more successfully than noncommunicable diseases.

[20]

Or

- 14\* Examine the extent to which technology can reduce threats from disease.

[20]

**Topic 2.3 Exploring Oceans**

- 15\* Examine the extent to which oceanic waters are being altered by human activity.

[20]

Or

- 16\* Assess the effectiveness of various stakeholders in the management of an oceanic resource.

[20]

**Topic 2.4 Future of Food**

**17\*** Examine the extent to which food security can impact on people's lives.

**[20]**

**Or**

**18\*** 'Globalisation of the food industry creates more opportunities than issues.' How far do you agree with this statement?

**[20]**

**Topic 2.5 Hazardous Earth**

**19\*** 'Environmental impacts of tectonic hazards are more significant than economic impacts.' How far do you agree with this statement?

**[20]**

**Or**

**20\*** 'Managing hazards in Advanced Countries (ACs) is more successful than any other area of the world.' How far do you agree with this statement?

**[20]**

**AS Level Geography**

**H081/02 Geographical debates**

**SAMPLE MARK SCHEME**

**Duration:** 1 hour 30 minutes

**MAXIMUM MARK 68**

**DRAFT**

**This document consists of 88 pages**

## MARKING INSTRUCTIONS

## PREPARATION FOR MARKING

## SCORIS

1. Make sure that you have accessed and completed the relevant training packages for on-screen marking: *scoris assessor Online Training*; *OCR Essential Guide to Marking*.
2. Make sure that you have read and understood the mark scheme and the question paper for this unit. These are posted on the RM Cambridge Assessment Support Portal <http://www.rm.com/support/ca>
3. Log-in to scoris and mark the **required number** of practice responses (“scripts”) and the **required number** of standardisation responses.

YOU MUST MARK 10 PRACTICE AND 10 STANDARDISATION RESPONSES BEFORE YOU CAN BE APPROVED TO MARK LIVE SCRIPTS.

## TRADITIONAL

Before the Standardisation meeting you must mark at least 10 scripts from several centres. For this preliminary marking you should use **pencil** and follow the **mark scheme**. Bring these **marked scripts** to the meeting.

## MARKING

1. Mark strictly to the mark scheme.
2. Marks awarded must relate directly to the marking criteria.
3. The schedule of dates is very important. It is essential that you meet the scoris 50% and 100% (traditional 50% Batch 1 and 100% Batch 2) deadlines. If you experience problems, you must contact your Team Leader (Supervisor) without delay.
4. If you are in any doubt about applying the mark scheme, consult your Team Leader by telephone, email or via the scoris messaging system.

5. Work crossed out:
- where a candidate crosses out an answer and provides an alternative response, the crossed out response is not marked and gains no marks
  - if a candidate crosses out an answer to a whole question and makes no second attempt, and if the inclusion of the answer does not cause a rubric infringement, the assessor should attempt to mark the crossed out answer and award marks appropriately.
6. Always check the pages (and additional objects if present) at the end of the response in case any answers have been continued there. If the candidate has continued an answer there then add a tick to confirm that the work has been seen.
7. There is a NR (No Response) option. Award NR (No Response)
- if there is nothing written at all in the answer space
  - OR if there is a comment which does not in any way relate to the question (e.g. 'can't do', 'don't know')
  - OR if there is a mark (e.g. a dash, a question mark) which isn't an attempt at the question.
- Note: Award 0 marks – for an attempt that earns no credit (including copying out the question).
8. The scoris **comments box** is used by your Team Leader to explain the marking of the practice responses. Please refer to these comments when checking your practice responses. **Do not use the comments box for any other reason.**  
If you have any questions or comments for your Team Leader, use telephone, email or the scoris messaging system.
9. Assistant Examiners will send a brief report on the performance of candidates to their Team Leader (Supervisor) via email by the end of the marking period. The report should contain notes on particular strengths displayed as well as common errors or weaknesses. Constructive criticism of the question paper/mark scheme is also appreciated.

## 10. Annotations

Annotation	Meaning

## 11. Subject-specific Marking Instructions

### INTRODUCTION

Your first task as an Examiner is to become thoroughly familiar with the material on which the examination depends. This material includes:

- the specification, especially the assessment objectives
- the question paper and its rubrics
- the mark scheme.

You should ensure that you have copies of these materials.

You should ensure also that you are familiar with the administrative procedures related to the marking process. These are set out in the OCR booklet **Instructions for Examiners**. If you are examining for the first time, please read carefully **Appendix 5 Introduction to Script Marking: Notes for New Examiners**.

Please ask for help or guidance whenever you need it. Your first point of contact is your Team Leader.

**USING THE MARK SCHEME**

Please study this Mark Scheme carefully. The Mark Scheme is an integral part of the process that begins with the setting of the question paper and ends with the awarding of grades. Question papers and Mark Schemes are developed in association with each other so that issues of differentiation and positive achievement can be addressed from the very start.

This Mark Scheme is a working document; it is not exhaustive; it does not provide 'correct' answers. The Mark Scheme can only provide 'best guesses' about how the question will work out, and it is subject to revision after we have looked at a wide range of scripts.

The Examiners' Standardisation Meeting will ensure that the Mark Scheme covers the range of candidates' responses to the questions, and that all Examiners understand and apply the Mark Scheme in the same way. The Mark Scheme will be discussed and amended at the meeting, and administrative procedures will be confirmed. Co-ordination scripts will be issued at the meeting to exemplify aspects of candidates' responses and achievements; the co-ordination scripts then become part of this Mark Scheme.

Before the Standardisation Meeting, you should read and mark in pencil a number of scripts, in order to gain an impression of the range of responses and achievement that may be expected.

In your marking, you will encounter valid responses which are not covered by the Mark Scheme: these responses must be credited. You will encounter answers which fall outside the 'target range' of Bands for the paper which you are marking. Please mark these answers according to the marking criteria.

Please read carefully all the scripts in your allocation and make every effort to look positively for achievement throughout the ability range. Always be prepared to use the full range of marks.

**LEVELS OF RESPONSE QUESTIONS:**

The indicative content indicates the expected parameters for candidates' answers, but be prepared to recognise and credit unexpected approaches where they show relevance.

Using 'best-fit', decide first which set of level descriptors best describes the overall quality of the answer. Once the level is located, adjust the mark concentrating on features of the answer which make it stronger or weaker following the guidelines for refinement.

**Highest mark:** If clear evidence of all the qualities in the level descriptors is shown, the HIGHEST Mark should be awarded.

**Lowest mark:** If the answer shows the candidate to be borderline (i.e. they have achieved all the qualities of the levels below and show limited evidence of meeting the criteria of the level in question) the LOWEST mark should be awarded.

**Middle mark:** This mark should be used for candidates who are secure in the level. They are not 'borderline' but they have only achieved some of the qualities in the level descriptors.

Be prepared to use the full range of marks. Do not reserve (e.g.) highest level marks 'in case' something turns up of a quality you have not yet seen. If an answer gives clear evidence of the qualities described in the level descriptors, reward appropriately.

Quality of extended response will be assessed in questions marked with an (\*). Quality of extended response is not attributed to any single assessment objective but instead is assessed against the entire response for the question.

	<b>AO1</b>	<b>AO2</b>	<b>AO3</b>	<b>Quality of extended response</b>
<b>Comprehensive</b>	A wide range of detailed and accurate knowledge that demonstrates fully developed understanding that shows full relevance to the demands of the question. Precision in the use of question terminology.	Knowledge and understanding shown is consistently applied to the context of the question, in order to form a:  clear, developed and convincing analysis that is fully accurate.  clear, developed and convincing interpretation that is fully accurate.  detailed and substantiated evaluation that offers secure judgements leading to rational conclusions that are evidence based.	Quantitative, qualitative and/or fieldwork skills are used in a consistently appropriate and effective way and with a high degree of competence and precision.	There is a well-developed line of reasoning which is clear and logically structured. The information presented is relevant and substantiated.
<b>Thorough</b>	A range of detailed and accurate knowledge that demonstrates well developed understanding that is relevant to the demands of the question. Generally precise in the use of question terminology.	Knowledge and understanding shown is mainly applied to the context of the question, in order to form a :  clear and developed analysis that shows accuracy.  clear and developed interpretation that shows accuracy.  detailed evaluation that offers generally secure judgements, with some link between rational conclusions and evidence.	Quantitative, qualitative and/or fieldwork skills are used in a suitable way and with a good level of competence and precision.	There is a line of reasoning presented with some structure. The information presented is in the most-part relevant and supported by some evidence.

<b>Reasonable</b>	<p>Some sound knowledge that demonstrates partially developed understanding that is relevant to the demands of the question.</p> <p>Awareness of the meaning of the terms in the question.</p>	<p>Knowledge and understanding shown is partially applied to the context of the question, in order to form a:</p> <p>sound analysis that shows some accuracy.</p> <p>sound interpretation that shows some accuracy.</p> <p>sound evaluation that offers generalised judgements and conclusions, with limited use of evidence.</p>	<p>Quantitative, qualitative and/or fieldwork skills are used in a mostly suitable way with a sound level of competence but may lack precision.</p>	<p>The information has some relevance and is presented with limited structure. The information is supported by limited evidence.</p>
<b>Basic</b>	<p>Limited knowledge that is relevant to the topic or question with little or no development.</p> <p>Confusion and inability to deconstruct terminology as used in the question.</p>	<p>Knowledge and understanding shows limited application to the context of the question in order to form a:</p> <p>simple analysis that shows limited accuracy.</p> <p>simple interpretation that shows limited accuracy.</p> <p>Un-supported evaluation that offers simple conclusions.</p>	<p>Quantitative, qualitative and/or fieldwork skills are used inappropriately with limited competence and precision.</p>	<p>The information is basic and communicated in an unstructured way. The information is supported by limited evidence and the relationship to the evidence may not be clear.</p>

Question		Answer	Marks	Guidance
1	(a)	<p><b>Explain how ice cores are used to reconstruct past climate.</b></p> <p>Ice core drilling began in 1950s mainly on the Greenland and Antarctic ice sheets, trying to identify bubbles in ice cores (✓). The bubbles in ice cores preserve annual layers of the world's ancient atmosphere and air temperatures (✓). Looking at past concentrations of greenhouse gases in layers in ice cores allows scientists to make comparisons with concentrations of carbon dioxide and methane gases today (✓). The presence of dust and trace chemicals in the ice can be determined, these could be from volcanic activity or increased periods of aridity (✓).</p>	<p><b>4</b> AO1 x4</p>	<p><b>AO1 – 4 marks</b> 4 x 1 mark (✓) for each correct explanation</p> <p>Focus should be on how the method is used to reconstruct past climate</p>
	(b)	<p><b>Suggest why one EDC's greenhouse gas emissions have changed over time.</b></p> <p><b>Level 3 (5-6 marks)</b> Demonstrates <b>thorough</b> knowledge and understanding of the contribution of one EDC to anthropogenic greenhouse gas emissions over time (AO1).</p> <p>The answer should include <b>accurate place-specific</b> detail. Amount of place-specific detail determines credit within the level.</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide a clear and developed analysis that shows accuracy as to why one EDCs greenhouse gas emissions have changed over time (AO2).</p> <p><b>Level 2 (3-4 marks)</b> Demonstrates <b>reasonable</b> knowledge and understanding of the changes in one EDCs greenhouse gas emissions over time (AO1).</p>	<p><b>6</b> AO1 x3 AO2 x3</p>	<p><b>Indicative content</b> Any EDC may be used in the answer and the choice of EDC will determine the content of the answer.</p> <p><b>AO1 – 3 marks</b> Knowledge and understanding of the contribution of one EDC to anthropogenic greenhouse gases could potentially include:</p> <ul style="list-style-type: none"> <li>anthropogenic greenhouse gases e.g. carbon dioxide, methane, nitrous oxide, fluorinated gases</li> <li>main sources of greenhouse gas emissions due to human activity e.g. burning fossil fuels, farming, forestry, cement manufacture and aerosols (CFCs)</li> <li>in 2010 China contributed 23% of global GHG</li> <li>China's GHG emissions have risen from approximately 4.5 (million metric tons of carbon dioxide equivalent) in 2000, to 7.3 (2005), 9.7 (2010) to 11.4 (2014).</li> </ul> <p><b>AO2 – 3 marks</b> Application of knowledge and understanding to</p>

Question			Answer	Marks	Guidance														
			<p>The answer should include some <b>place-specific</b> detail which is <b>partially accurate</b>. Amount of place-specific detail determines credit within the level.</p> <p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound analysis that shows some accuracy as to why one EDCs greenhouse gas emissions have changed over time (AO2).</p> <p><b>Level 1 (1-2 marks)</b> Demonstrates <b>basic</b> knowledge and understanding of the changes in one EDCs greenhouse gas emissions over time (AO1).</p> <p>There is an attempt to include <b>place-specific</b> detail but it is <b>inaccurate</b>.</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding to provide a simple analysis that shows limited accuracy as to why one EDCs greenhouse gas emissions have changed over time (AO2).</p> <p><b>0 marks</b> No response or no response worthy of credit.</p>		<p>analyse why one EDC's greenhouse gas emissions have changed over time could potentially include:</p> <ul style="list-style-type: none"><li>carbon emissions from fossil fuels have significantly increased since the 2000s particularly due to coal. 50% of China's coal consumption (2014) is used to generate electricity</li><li>China's rise to the second largest economy was largely driven by its coal consumption. It is averaging four billion tonnes a year</li><li>rapid rate of industrialisation particularly in the production of steel, meant coal was an essential raw material</li><li>population increase in China has led to the growth of cities e.g. Shanghai, Beijing, Nanjing and car ownership</li><li>deforestation and impact on CO<sub>2</sub> levels</li><li>the future – China's greenhouse gas emissions are set to fall by 2025, with an increased drive towards renewables. Climate Action Tracker has recorded China's target to reach peak CO<sub>2</sub> emissions by 2030 at the latest.</li></ul>														
	(c)	(i)	<p><b>Using the carbon dioxide emissions data above, calculate the interquartile range. Question	Answer	Marks	Guidance
	<p>This will be shown by including <b>well-developed</b> ideas about whether oceans present hazardous obstacles to human activity.</p> <p><b>Level 3 (7-9 marks)</b> Demonstrates <b>thorough</b> knowledge and understanding of hazardous obstacles and human activities in oceans (AO1).</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide a detailed evaluation that offers generally secure judgements, with some link between rational conclusions and evidence as to whether oceans present hazardous obstacles (AO2).</p> <p>This will be shown by including <b>well-developed</b> ideas about whether oceans present hazardous obstacles to human activity.</p> <p><b>Level 2 (4-6 marks)</b> Demonstrates <b>reasonable</b> knowledge and understanding of hazardous obstacles and human activities in oceans (AO1).</p> <p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound evaluation that offers generalised judgements and conclusions, with limited use of evidence as to whether oceans present obstacles to human activity (AO2).</p> <p>This will be shown by including <b>developed</b> ideas about whether oceans present obstacles to human activity.</p> <p><b>Level 1 (1-3 marks)</b> Demonstrates <b>basic</b> knowledge and understanding of hazardous obstacles and human activities in oceans (AO1).</p> <p>Demonstrates <b>basic</b> application of knowledge and</p>		<p>and energy resources, extraction of sea bed minerals</p> <ul style="list-style-type: none"> <li>oceans present hazardous obstacles which are physical / natural e.g. relief of ocean basins, currents, ecosystem predators, warming temperatures.</li> </ul> <p><b>AO2 –6 marks</b> Application of knowledge and understanding to evaluate whether oceans present hazardous obstacles to human activity could potentially include:</p> <ul style="list-style-type: none"> <li>the value of oceans for energy resources – however, ocean basin relief and currents can provide challenges for oil and gas production due to drilling a wellbore in the seabed in deepwater areas. One of the world's deepest hubs is currently the Perdido in the Gulf of Mexico, floating in 2,438 meters of water</li> <li>deep sea mining for minerals takes place on the ocean floor approximately 1,400 up to 3,700 below the surface e.g. Papua New Guinea and New Zealand. The hydrothermal vents create sulfide deposits, which contain valuable metals e.g. silver, gold, copper, manganese, cobalt, and zinc. The obstacles presented by the ocean are the accessibility of the mineral deposits due to their deep sea / sea bed locations</li> <li>territorial waters such as the South China Sea can be sources of conflict as they are shipping routes and have great value to a number of countries. The South China Sea has two chains of islands with mineral resources and the area has high fish stocks. Disputes between China, Vietnam and the Philippines in particular relate to the geographical position of the islands, trade routes and access to resources</li> </ul>

Question	Answer	Marks	Guidance
	<p>understanding to provide an un-supported evaluation that offers simple conclusions as to whether oceans present obstacles to human activity (AO2).</p> <p>This will be shown by including <b>simple</b> ideas about the obstacles oceans present and different human activities.</p> <p><b>0 marks</b> No response or no response worthy of credit.</p>		<ul style="list-style-type: none"> <li>• a number of human activities create hazardous obstacles within the oceans such as mineral and energy resource extraction as pollutants impact marine ecosystems. The ocean can be used as a 'dumping ground' for waste products e.g. plastics and nuclear waste this affects ocean temperatures and the marine ecosystems</li> <li>• oceans can provide escape routes e.g. Mediterranean sea. Whilst this stretch of sea from North Africa to Europe could be seen to be less hazardous e.g. currents, lighter winds, warmer temperatures the obstacles are very real for migrants such as exposure, boats are densely packed with people in poor conditions, with boats capsizing and many unable to swim</li> <li>• piracy off the coast of Somalia has been a threat to international shipping with economic impacts as shipping expenses are increased. It's thought the causes of piracy from the early 2000s were in response to illegal fishing by foreign boats and the dumping of toxic waste by foreign boats, both of which affected local fishermen from using the coastal waters and being able to earn a living so they formed armed groups.</li> </ul>

Question		Answer	Marks	Guidance
4	(a)	<p><b>Explain the physical conditions required for growing food.</b></p> <p>Variable temperatures, light intensity and duration are required for crops, any reduction in these can affect yields (✓). Water is essential for germination and plant growth and for certain biological functions (✓). Photosynthesis involves the absorption of CO<sub>2</sub> from the air and plants require O<sub>2</sub> for respiration (✓). Soils contain the mixture of mineral and organic matter for plant growth e.g. nitrogen (✓).</p>	<p><b>4</b> AO1 x4</p>	<p><b>AO1 – 4 marks</b> 1 mark (✓) for each correct explanation</p> <p>Focus should be on the physical conditions for growing food.</p>
	(b)	<p><b>Suggest why one indigenous group's food security can change over time.</b></p> <p><b>Level 3 (5-6 marks)</b> Demonstrates <b>thorough</b> knowledge and understanding of the threats to indigenous group's food security (AO1).  The answer should include <b>accurate place-specific</b> detail. Amount of place-specific detail determines credit within the level.  Demonstrates <b>thorough</b> application of knowledge and understanding to provide a clear and developed analysis that shows accuracy as to why one indigenous group's food security can change over time (AO2).</p> <p><b>Level 2 (3-4 marks)</b> Demonstrates <b>reasonable</b> knowledge and understanding of the threats to indigenous group's food security (AO1).  The answer should include some <b>place-specific</b> detail which is <b>partially accurate</b>. Amount of place-specific detail determines credit within the level.  Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound analysis that shows some</p>	<p><b>6</b> AO1 x3 AO2 x3</p>	<p><b>Indicative content</b> Any indigenous group may be used in the answer and the choice of indigenous group will determine the content of the answer.</p> <p><b>AO1 – 3 marks</b> Knowledge and understanding of the threats to indigenous group's food security could potentially include:</p> <ul style="list-style-type: none"> <li>• Nunavut indigenous Inuit people from the Canadian Arctic survive largely by harvesting plants and animals at a subsistence level, their food insecurity is 5 times the national average</li> <li>• climate change is threatening the Nunavut's subsistence farming culture e.g. animal migration patterns or plants not adapting as quickly as the climate is warming</li> <li>• the accessibility of food supplies and availability of healthy food especially for impoverished communities e.g. nearly 70% of households find it hard to access affordable / nutritious food</li> <li>• reliance on food supplies from outside the area this is particularly important for remote communities</li> </ul>

Question	Answer	Marks	Guidance
	<p>accuracy as to why one indigenous group's food security can change over time (AO2).</p> <p><b>Level 1 (1-2 marks)</b> Demonstrates <b>basic</b> knowledge and understanding of the threats to indigenous group's food security (AO1).</p> <p>There is an attempt to include <b>place-specific</b> detail but it is <b>inaccurate</b>.</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding to provide a simple analysis that shows limited accuracy as to why one indigenous group's food security can change over time (AO2).</p> <p><b>0 marks</b> No response or no response worthy of credit.</p>		<p><b>AO2 – 3 marks</b> Application of knowledge and understanding to analyse why one indigenous group's food security can change over time could potentially include:</p> <ul style="list-style-type: none"> <li>• climate change / changing environmental conditions e.g. warmer weather, thinner ice, variable snowfall (e.g. difficult for animals foraging), unpredictable weather (e.g. prevents food arriving by air)</li> <li>• wildlife stocks declining so fewer numbers for hunting (e.g. Muskoxen), health of wildlife, changing migration routes due to climate change (e.g. more challenging to hunt as they are further from community groups)</li> <li>• rising costs e.g. farming equipment makes it challenging to grow and produce food</li> <li>• changing diets and food practices through the potential modernisation of communities, with considerable numbers of people with low incomes e.g. hunting has become more a weekend activity and people prefer to eat local food</li> <li>• need for more food processing facilities close to the Nunavut, currently there are only 3 e.g. Kitikmoet Foods in Cambridge Bay</li> <li>• loss of traditional knowledge to hunt and harvest wildlife as it becomes more challenging to gain food from the environment</li> <li>• population growth is putting pressure on resources and their potential sustainability</li> <li>• international pressure to preserve the Arctic environment can be opposed to traditional hunting rights and practices</li> <li>• hunting as a tourist activity depletes wildlife stocks e.g. Muskoxen, Caribou or small game</li> </ul>

Indigenous and remote communities utilise the environment fully and few other factors are as crucial</li> <li>physical factors combine with human factors in Zimbabwe to create low levels of food security. Government policies to redistribute land, lack of investment in machinery, fertilisers as well</li> </ul>

Question	Answer	Marks	Guidance
	<p>generalised judgements and conclusions, with limited use of evidence as to whether physical factors are the greatest risk to food security (AO2).</p> <p>This will be shown by including <b>developed</b> ideas about whether physical factors present the greatest risk to food security.</p> <p><b>Level 1 (1-3 marks)</b> Demonstrates <b>basic</b> knowledge and understanding of the factors affecting food security (AO1).</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding to provide an un-supported evaluation that offers simple conclusions as to whether physical factors present the greatest risk to food security (AO2).</p> <p>This will be shown by including <b>simple</b> ideas about the factors affecting food security.</p> <p><b>0 marks</b> No response or no response worthy of credit.</p>		<p>as irrigation occurred alongside a physical environment with variable soil quality and rainfall. Zimbabwe's growing population also put pressure on food availability.</p> <ul style="list-style-type: none"> <li>• even if physical conditions are favourable to food production, political decisions and government policy will impact food security e.g. Singapore. This has favourable conditions to grow food however the small geographical size of the island means there are severe pressures on space. They could quickly have issues with food security if they were unable to import all their food items. Physical factors are not as important to Singapore's food security.</li> <li>• more advanced countries have the political and economic means to ensure food security even if physical conditions pose a threat, they can purchase land (issue of land grabbing) and/or import food</li> <li>• in LIDCs with harsh physical environments (e.g. drought and flooding) there is often a lack of investment, political and technological knowledge needed to overcome these difficulties e.g. famine in Ethiopia</li> <li>• access to food relates to not just supply but also income, markets and prices. Even if the physical environment allows sufficient food production people must still have the economic means to access it</li> <li>• for Malthus, when population outstrips food supplies, a ceiling is reached and a rebalancing leads to diminishing food supplies and population. In fragile physical environments such as the Sahel it takes very little population increase to place pressure on food security.</li> </ul>

Question		Answer	Marks	Guidance
5	(a)	<p><b>Explain how fossil records can be used as evidence of continental drift and plate tectonics theory.</b></p> <p>Fossils are the preserved traces of animals and plants found inside rock, they help date geological material (✓). The geographic distribution of fossils has helped to understand the spread of different species over time (✓). Anomalies in the distribution presented a problem for geologists as very similar fossils were discovered in rock masses separated by vast distances or oceans e.g. some of the same fossils were found in southern Africa and the tip of south America (✓). Similar fossilised remains of plants and animals found on different continents provided evidence for Wegener of continental drift (✓).</p>	<p><b>4</b> AO1 x4</p>	<p><b>AO1 – 4 marks</b> 1 mark (✓) for each correct explanation</p> <p>Focus should be on how fossils present evidence for continental drift and plate tectonics.</p>
	(b)	<p><b>Suggest why people experience varying impacts resulting from one volcanic eruption.</b></p> <p><b>Level 3 (5-6 marks)</b> Demonstrates <b>thorough</b> knowledge and understanding of the impacts people experience as a result of one volcanic eruption (AO1).</p> <p>The answer should include <b>accurate place-specific</b> detail. Amount of place-specific detail determines credit within the level.</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide a clear and developed analysis that shows accuracy as to why people experience varying impacts resulting from one volcanic eruption (AO2).</p> <p><b>Level 2 (3-4 marks)</b> Demonstrates <b>reasonable</b> knowledge and understanding of the impacts people experience as a result of one volcanic</p>	<p><b>6</b> AO1 x3 AO2 x3</p>	<p><b>Indicative content</b> Any volcanic eruption may be used in the answer and the choice of volcanic eruption will determine the content of the answer.</p> <p><b>AO1 – 3 marks</b> Knowledge and understanding of the impacts people experience as a result of one volcanic eruption could potentially include:</p> <ul style="list-style-type: none"> <li>• Eyjafjallajökull eruption had impacts on Iceland, e.g. lava flow, flooding and ash fallout, and a number of other countries in 2010 e.g. travel disruptions, air freight disruptions (e.g. FedEx), goods spoilt (e.g. African flowers destined for European markets)</li> <li>• social impacts e.g. loss of life, disruption to working week, threats to homes</li> <li>• economic impacts e.g. the fine grained ash plume grounded flights across Europe, damage to agricultural land as ash fell</li> <li>• environmental impacts e.g. Eyjafjallajökull glacier</li> </ul>

Question	Answer	Marks	Guidance
	<p>eruption (AO1).</p> <p>The answer should include some <b>place-specific</b> detail which is <b>partially accurate</b>. Amount of place-specific detail determines credit within the level.</p> <p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound analysis that shows some accuracy as to why people experience varying impacts resulting from one volcanic eruption (AO2).</p> <p><b>Level 1 (1-2 marks)</b> Demonstrates <b>basic</b> knowledge and understanding of the impacts people experience as a result of one volcanic eruption (AO1).</p> <p>There is an attempt to include <b>place-specific</b> detail but it is <b>inaccurate</b>.</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding to provide a simple analysis that shows limited accuracy as to why people experience varying impacts resulting from one volcanic eruption (AO2).</p> <p><b>0 marks</b> No response or no response worthy of credit.</p>		<p>underneath the volcano, melted and caused widespread flooding, local water supplies were contaminated by the ash, 3,000 tonnes of carbon dioxide into the air per day.</p> <p><b>AO2 – 3 marks</b> Application of knowledge and understanding to analyse why people experience varying impacts resulting from one volcanic eruption could potentially include:</p> <ul style="list-style-type: none"> <li>• release of fine dust particles and carbon dioxide e.g. 0.15 million tonnes each day and its effects on human health (e.g. breathing and lung capacity)</li> <li>• proximity to the volcanic eruption e.g. homes destroyed by the lava flows (which reached 3km from the volcanic fissure) and ash deposits</li> <li>• 150 metre thick ice cap melted which caused major flooding and 700 people were evacuated from their homes, with 20 farms destroyed</li> <li>• potential gains from volcanic activity e.g. numbers of visitors to Eyjafjallajokull significantly increased for the first couple of years after the event</li> <li>• the ash from the volcanic eruption was rich in nutrients and benefitted farmers however the eruption consisted mainly of glass which is not easily soluble in water e.g. silica and aluminium</li> <li>• ash falling in water courses (rivers) or travelling there via surface runoff can potentially harm and irritate the gills of fish and aquatic ecosystems which through the food chain could be passed onto humans.</li> </ul>

10 (a)	<p><b>Using Fig.5, suggest how living in tectonically active areas influences place profiles.</b></p> <p><b>Level 3 (6-8 marks)</b>            Demonstrates <b>thorough</b> knowledge and understanding of life in tectonically active areas and place profiles (AO1).</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide a clear and developed interpretation that shows accuracy of how living in tectonically active areas influences place profiles (AO2).</p> <p>This will be shown by including <b>well-developed</b> ideas linking resource evidence on tectonically active areas to place profiles.</p> <p>There are clear attempts to make synoptic links between content from different parts of the course of study.</p> <p><b>Level 2 (3-5 marks)</b>            Demonstrates <b>reasonable</b> knowledge and understanding of life in tectonically active areas and place profiles (AO1).</p> <p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound interpretation that shows some accuracy of how living in tectonically active areas influences place profiles (AO2).</p> <p>This will be shown by including <b>developed</b> ideas linking resource evidence on tectonically active areas to place profiles.</p> <p>There are some attempts to make synoptic links between content from different parts of the course of study but these</p>	<p><b>8</b>            AO1 x4            AO2 x4</p>	<p><b>Indicative content.</b>  <b>AO1 – 4 marks</b>            Knowledge and understanding of place profiles could potentially include:</p> <ul style="list-style-type: none"> <li>• reasons why people choose to live in tectonically active locations as a result of volcanic eruptions and / or earthquake activity</li> <li>• the impacts people experience as a result of volcanic eruptions and / or earthquake activity</li> <li>• economic, environmental impacts on a country as a result of volcanic eruptions and / or earthquake activity</li> <li>• demographic, socio-economic, cultural, political, built and natural characteristics that shape a place identity</li> <li>• past and present connections that shape the place identity</li> <li>• how shifting flows of people, resources, money, investment and ideas shape the profile of places.</li> </ul> <p><b>AO2 – 4 marks</b>            Application of knowledge and understanding to interpret how living in tectonically active areas influences place profiles, could potentially include:</p> <ul style="list-style-type: none"> <li>• Fig. 5, the cartoon shows a man's understanding of a hazardous environment which may not match reality depending on the past connections that have shaped the identity of Christchurch</li> <li>• the outrage on the man's face in the cartoon (fig.5) and his statement suggest the newspaper indicates the scale of the Christchurch earthquake to the reader e.g. death toll, and this in time could influence the place profile through economic impacts or outmigration due to the tectonic hazard</li> </ul>

		<p>are not always relevant.</p> <p><b>Level 1 (1-2 marks)</b> Demonstrates <b>basic</b> knowledge and understanding of life in tectonically active areas and place profiles (AO1).</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding to provide a simple interpretation that shows limited accuracy of how living in tectonically active areas can influence place profiles (AO2).</p> <p>This will be shown by including <b>developed</b> ideas linking resource evidence on tectonically active areas to place profiles.</p> <p>There are limited attempts to make synoptic links between content from different parts of the course of study.</p> <p><b>0 marks</b> No response or no response worthy of credit</p>		<ul style="list-style-type: none"> <li>• living in a tectonically active area may influence place profiles through the built and natural environments. The built environment could include hazard prevention measures e.g. shock absorbing foundations or shatter proof glass. The natural environment could be shaped by previous volcanic eruptions and so be aesthetically pleasing and fertile soils offer farming potential and therefore economic gains</li> <li>• living in a tectonically active area may influence place profiles through cultural characteristics. Culturally some communities offer sacrifices to volcanoes as they think Gods determine their eruptions. Some cities run earthquake drills due to the common occurrence of the hazard this may worry local people therefore encouraging them to move away creating shifting flows of people</li> <li>• tectonically active areas may have little influence on place profiles due to shifting flows of money and technology which allow for greater mitigation against the earthquake hazard. The resident population may become accustomed to the frequency of the tectonic activity and this becomes part of their day to day life.</li> </ul>
	(b)	<p><b>Examine how volcanic eruptions can influence people's emotional attachment to a place.</b></p> <p><b>Level 3 (6-8 marks)</b> Demonstrates <b>thorough</b> knowledge and understanding of volcanic eruptions and people's emotional attachment to place (AO1).</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide a clear and developed analysis that shows accuracy of how volcanic eruptions can influence emotional attachment to place (AO2).</p> <p>There must be <b>well-developed</b> ideas about how volcanic</p>	<p><b>8</b> AO1 x4 AO2 x4</p>	<p><b>Indicative content.</b> <b>AO1 – 4 marks</b> Knowledge and understanding of volcanic eruptions and people's emotional attachment to a place, could potentially include:</p> <ul style="list-style-type: none"> <li>• reasons why people choose to live in tectonically active locations as a result of volcanic eruptions</li> <li>• the impacts people experience as a result of volcanic eruptions</li> <li>• economic and environmental impacts on a country as a result of volcanic eruptions</li> <li>• the degree of risk posed by a hazard and the probability</li> <li>• how and why people perceive places in different</li> </ul>

		<p>eruptions influence emotional attachment to place.</p> <p>There are clear attempts to make synoptic links between content from different parts of the course of study.</p> <p><b>Level 2 (3-5 marks)</b> Demonstrates <b>reasonable</b> knowledge and understanding of volcanic eruptions and people's emotional attachment to place (AO1).</p> <p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound analysis that shows some accuracy of how volcanic eruptions influence emotional attachment to place (AO2).</p> <p>There must be <b>developed</b> ideas about how volcanic eruptions influence emotional attachment to place.</p> <p>There are some attempts to make synoptic links between content from different parts of the course of study but these are not always relevant.</p> <p><b>Level 1 (1-2 marks)</b> Demonstrates <b>basic</b> knowledge and understanding of volcanic eruptions and people's emotional attachment to place (AO1).</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding to provide a simple analysis that shows limited accuracy of how climate volcanic eruptions influence emotional attachment to place (AO2).</p> <p>This will be shown by including <b>simple</b> ideas about how volcanic eruptions influence emotional attachment to place.</p> <p>There are limited attempts to make synoptic links between content from different parts of the course of study.</p>		<p>ways based on their identity e.g. age, gender, sexuality, religion and role</p> <ul style="list-style-type: none"> <li>• how level of emotional attachment to place can influence people's behaviour and activities in a place.</li> </ul> <p><b>AO2 – 4 marks</b> Application of knowledge and understanding to analyse how volcanic eruptions influence emotional attachment to place could potentially include:</p> <ul style="list-style-type: none"> <li>• the degree of risk posed by a volcano and how that is translated and conveyed between generations can impact on an individuals and communities perceptions and this will influence their level of emotional attachment e.g. remote communities attach a lot of cultural significance to living near a volcano, it is part of their community and identity</li> <li>• some communities believe a volcano is inhabited by a God / Gods e.g. In Bali locals sleep with their heads towards the volcano. Indonesian's offer sacrifices to the volcanoes such as goats, money and chickens to bring them prosperity. People's emotional attachment to the place has a significant impact on their behaviour and culture</li> <li>• volcanic eruptions have influenced people's activities in the area of Naples, Italy around Mount Vesuvius. Two large eruptions thousands of years ago left thick deposits of tephra which have weathered to form rich, fertile soils. This area is abundant for farming and there are a number of tourist related economic activities</li> <li>• Iceland utilises its tectonic and volcanic activity for economic gain through tourism and geothermal energy and it is very much a part of the countries identity. The geothermal energy and tourism (geysers, volcanoes, geothermal spas) are very much part of people's daily lives and their way of</li> </ul>
--	--	---	--	--

			<p><b>0 marks</b> No response or no response worthy of credit.</p>		<p>supporting themselves, producing food (greenhouses) and a source of revenue (tours, hotels etc.) therefore their emotional attachment to their home / place</p> <ul style="list-style-type: none"> <li>• perception of volcanic eruptions depends on probability of it happening, the scale of the event and technological advancement to mitigate against the risk. Despite Montserrat last erupting in 1995, the inhabitants from the south of the island still no longer live there as they were evacuated off the island or to the north. Despite people's emotional attachment to their home, a strong fishing community and tourism industry the continued eruptions have made it too risky to return and there has been very little / no clean up. The perception of risk before 1995 was low as the previous eruption was 300 years ago and yet the long term effects have been devastating on individuals and the community of Montserrat</li> <li>• impact of volcanic eruptions may not be felt in someone's lifetime but they gain all benefits of living in a beautiful area due to the volcano, soils, farming, tourism potential. They could be emotionally attached to the place due to their family and personal circumstances and the volcanic eruption is not a particular reality to them.</li> </ul>

Question	Answer	Marks	Guidance
	<p><b>Level 3 (5–7 marks)</b> Demonstrates <b>thorough</b> application of knowledge and understanding to provide a clear and developed analysis that shows accuracy of how food security impacts on people's lives.</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide a detailed evaluation that offers generally secure judgements, with some link between rational conclusions and evidence of the extent to which food security can impact on people's lives.</p> <p><b>Level 2 (3–4 marks)</b> Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound analysis that shows some accuracy of how food security impacts on people's lives.</p> <p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound evaluation that offers generalised judgements and conclusions, with limited use of evidence of the extent to which food security can impact on people's lives.</p> <p><b>Level 1 (1–2 marks)</b> Demonstrates <b>basic</b> application of knowledge and understanding to provide a simple analysis that shows limited accuracy of how food security impacts on people's lives.</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding to provide an un-supported evaluation that offers simple conclusions of the extent to which food security can impact on people's lives.</p> <p><b>0 marks</b> No response or no response worthy of credit.</p>		<p>some people within a country over-consuming food, having an ill-balanced diet both in terms of quantity and quality. This can lead to health issues associated with obesity such as diabetes, cardio-vascular diseases, some cancers and long term impacts on joints such as hips and knees e.g. USA and UK</p> <ul style="list-style-type: none"> <li>• within a country, food security can vary significantly amongst the population so an average assessment of food security may hide groups who are food insecure and whose health suffers as a consequence e.g. the poor in any country are likely to be the least food secure and the most unhealthy. This point applies to ACs, EDCs and LIDCs. In ACs people can still be malnourished and have to access food through food banks, soup kitchens</li> <li>• high levels of food security can involve intensive agriculture which uses pesticides, insecticides and herbicides which can have detrimental effects on people's health</li> <li>• population increase and pressure on food supplies in areas that are environmentally fragile e.g. The Sahel, small changes in population can significantly affect food supplies and therefore the survival of populations</li> <li>• food prices are changeable according to demand, supply and consumer tastes so the knock on effect on the state of food security in individual areas, countries or regions could change e.g. pest outbreak, adverse weather, changing prices (seeds, fertilisers etc). People can become food insecure quite quickly</li> <li>• indigenous group's are resilient in terms of their survival and food security e.g. in tropical rainforest areas, sustainable use of the forest by shifting cultivators so they are food secure.</li> </ul>

Question	Answer	Marks	Guidance
	<p><b>Quality of extended response</b></p> <p><b>Level 4</b> There is a well-developed line of reasoning which is clear and logically structured. The information presented is relevant and substantiated.</p> <p><b>Level 3</b> There is a line of reasoning presented with some structure. The information presented is in the most-part relevant and supported by some evidence.</p> <p><b>Level 2</b> The information has some relevance and is presented with limited structure. The information is supported by limited evidence.</p> <p><b>Level 1</b> The information is basic and communicated in an unstructured way. The information is supported by limited evidence and the relationship to the evidence may not be clear.</p>		<p>However, challenges to their food security are created by declining soil fertility, soil erosion and flooding</p> <ul style="list-style-type: none"> <li>large scale commercial agriculture in tropical rainforest areas can be unsustainable creating lasting impacts on the environment and its ability to be able to support resident populations. Rates of deforestation affect the biodiversity of the forest, creates soil erosion and land degradation as soils are overgrazed and planted.</li> </ul>

Question	Answer	Marks	Guidance
18*	<p><b>'Globalisation of the food industry creates more opportunities than issues.'</b> How far do you agree with this statement.</p> <p><b>AO1</b>  <b>Level 4 (8-10 marks)</b>            Demonstrates <b>comprehensive</b> knowledge and understanding of opportunities and issues created by globalisation of the food industry.</p> <p><b>Level 3 (5-7 marks)</b>            Demonstrates <b>thorough</b> knowledge and understanding of opportunities and issues created by globalisation of the food industry.</p> <p><b>Level 2 (3-4 marks)</b>            Demonstrates <b>reasonable</b> knowledge and understanding of opportunities and issues created by globalisation of the food industry.</p> <p><b>Level 1 (1-2 marks)</b>            Demonstrates <b>basic</b> knowledge and understanding of opportunities and issues created by globalisation of the food industry.</p> <p><b>0 marks</b>            No response or no response worthy of credit.</p> <p><b>AO2</b>  <b>Level 4 (8-10 marks)</b>            Demonstrates <b>comprehensive</b> application of knowledge and understanding to provide a clear, developed and convincing analysis that is fully accurate as to how globalisation of the food industry creates opportunities and issues.</p> <p>Demonstrates <b>comprehensive</b> application of knowledge and understanding to provide a detailed and substantiated</p>	<p><b>20</b>            AO1 x10            AO2 x10</p>	<p><b>Indicative content</b>  <b>AO1 – 10 marks</b>            Knowledge and understanding of opportunities and issues created by globalisation of the food industry could potentially include:</p> <ul style="list-style-type: none"> <li>influence of globalisation on the food industry e.g. increased demand (e.g. meat) and global tastes (e.g. western foods in China)</li> <li>the roles of TNCs and agribusinesses involved in food production e.g. Unilever and Monsanto</li> <li>the roles of TNCs and other businesses involved in food processing, transport, distribution and retailing e.g. Nestlé, Unilever and Walmart</li> <li>the roles of governments and organisations e.g. trans-national (EU / UN / FAO / WTO), national e.g. UK, on agricultural policies and other policies impacting on food production e.g. environmental programmes.</li> </ul> <p><b>AO2 – 10 marks</b>            Application of knowledge and understanding to analyse and evaluate whether the globalisation of the food industry creates more opportunities than issues could potentially include:</p> <ul style="list-style-type: none"> <li>the role of key players who influence production within the global food system and the extent to which they bring about change e.g. the use of GM crops; the loss of family farms to agribusinesses</li> <li>the role of food processors, distributors and retailers on the global food system e.g. the role of TNC retailers e.g. Walmart in determining what farmers grow, where and when</li> <li>the role of players/stakeholders e.g. FAO and WTO on the global food system e.g. the generally positive view of the FAO in improving food security and achieving rural development</li> </ul>

Question	Answer	Marks	Guidance
	<p>evaluation that offers secure judgements leading to rational conclusions that are evidence based as to whether the globalisation of the food industry creates more opportunities than issues.</p> <p><b>Level 3 (5–7 marks)</b> Demonstrates <b>thorough</b> application of knowledge and understanding to provide a clear and developed analysis that shows accuracy as to how globalisation of the food industry creates opportunities and issues.</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide a detailed evaluation that offers generally secure judgements, with some link between rational conclusions and evidence as to whether the globalisation of the food industry creates more opportunities than issues.</p> <p><b>Level 2 (3–4 marks)</b> Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound analysis that shows some accuracy as to how globalisation of the food industry creates opportunities and issues.</p> <p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound evaluation that offers generalised judgements and conclusions, with limited use of evidence as to whether the globalisation of the food industry creates more opportunities than issues.</p> <p><b>Level 1 (1–2 marks)</b> Demonstrates <b>basic</b> application of knowledge and understanding to provide a simple analysis that shows limited accuracy as to how globalisation of the food industry creates opportunities and issues.</p> <p>Demonstrates <b>basic</b> application of knowledge and</p>		<p>compared to the WTO which to some serves the best interests of ACs more than others such as the LIDCs</p> <ul style="list-style-type: none"> <li>the role of changing consumer tastes as a result of globalisation on the global food system e.g. increased demand for ‘exotic’ and staple foods all year round in ACs such as strawberries, avocados and runner beans</li> <li>the effect of rising demand for meat in EDCs and LIDCs as living standards for some of their populations rise and the ‘westernisation’ of diets through globalisation processes e.g. East and South East Asia</li> <li>the extent to which climate change is causing change to the global food system e.g. the availability of water, hotter temperatures or the spread of certain pests. Agricultural produce could be genetically modified to cope with these changes</li> <li>food miles have increased due to the globalisation of food as it moves from farm to plate. Food largely travelling by air and HGVs with increasing levels of air pollution, high environmental impacts</li> <li>globalisation of the fast food industry links with Americanisation and what they represent in terms of western culture e.g. Coca Cola and McDonalds. This desire in some countries / cultures is leading to growing amounts of obesity</li> <li>technological innovations in farming e.g. digital soil mapping in data sparse regions such as Africa, hydroponics using mineral-enriched water, electronics giants using indoor vegetable farms such as Sharp, growing strawberries in Dubai or Sony growing lettuce and radishes in Japan.</li> </ul>

Question	Answer	Marks	Guidance
	<p>understanding to provide an un-supported evaluation that offers simple conclusions as to whether the globalisation of the food industry creates more opportunities than issues.</p> <p><b>0 marks</b> No response or no response worthy of credit.</p> <p><b>Quality of extended response</b></p> <p><b>Level 4</b> There is a well-developed line of reasoning which is clear and logically structured.
