

**OXFORD CAMBRIDGE AND RSA EXAMINATIONS
A2 GCE
4727/01**

MATHEMATICS

**Further Pure Mathematics 3
QUESTION PAPER**

**FRIDAY 15 JUNE 2018: Afternoon
DURATION: 1 hour 30 minutes
plus your additional time allowance
MODIFIED ENLARGED 24pt**

Candidates answer on the Printed Answer Book sent with the standard paper or any suitable paper supplied by the centre. The Printed Answer Book may be enlarged by the centre.

OCR SUPPLIED MATERIALS:

Printed Answer Book 4727/01 sent with the standard paper

List of Formulae (MF1) sent with the standard paper

OTHER MATERIALS REQUIRED:

Scientific or graphical calculator

READ INSTRUCTIONS OVERLEAF

INSTRUCTIONS TO CANDIDATES

Write your name, centre number and candidate number in the spaces provided on the Printed Answer Book or on the paper provided. Please write clearly and in capital letters.

IF YOU USE THE PRINTED ANSWER BOOK, WRITE YOUR ANSWER TO EACH QUESTION IN THE SPACE PROVIDED. If additional space is required, you should use the lined page(s) at the end of the Printed Answer Book. The question number(s) must be clearly shown.

Use black ink. HB pencil may be used for graphs and diagrams only.

Answer ALL the questions.

Read each question carefully. Make sure you know what you have to do before starting your answer.

You are permitted to use a scientific or graphical calculator in this paper.

Give non-exact numerical answers correct to 3 significant figures unless a different degree of accuracy is specified in the question or is clearly appropriate.

INFORMATION FOR CANDIDATES

The number of marks is given in brackets [] at the end of each question or part question on the Question Paper.

YOU ARE REMINDED OF THE NEED FOR CLEAR PRESENTATION IN YOUR ANSWERS.

The total number of marks for this paper is 72.

INSTRUCTION TO EXAMS OFFICER/INVIGILATOR

Do not send this Question Paper for marking; it should be retained in the centre or recycled. Please contact OCR Copyright should you wish to re-use this document.

Answer ALL the questions.

1 (i) Find the shortest distance from the point $(3, -1, -2)$ to the plane with equation $x - 2y + 4z = 11$. [2]

(ii) Find a cartesian equation of the plane which passes through the point $(3, -1, -2)$ and is parallel to the plane $x - 2y + 4z = 11$. [2]

2 A multiplicative group G consists of the elements $\{1, z, z^2, z^3, z^4, z^5\}$.

(i) State the order of the element z^4 . [1]

(ii) List all the subgroups of G . [3]

The group H consists of the set $\{1, 2, 3, 4, 5, 6\}$ with the operation of multiplication modulo 7.

(iii) Determine whether G is isomorphic to H . [2]

3 It is given that the differential equation

$$2\frac{d^2y}{dx^2} - \frac{dy}{dx} - 3y = 10e^{-x}$$

has a particular integral of the form axe^{-x} , where a is a constant. Solve the differential equation subject to

the conditions $y = 0$ and $\frac{dy}{dx} = -\frac{9}{2}$ when $x = 0$. [10]

4 The operation $*$ is defined by $x * y = xy + k(x + y) + 12$, where x and y are real numbers and k is a real constant. It is given that the operation $*$ is associative.

(i) Show that there are two possible values for k , one of which is 4. [4]

(ii) In the case where $k = 4$, determine whether the set of real numbers, under the operation $*$, forms a group. [4]

5 The differential equation

$$\frac{dy}{dx} + \frac{2y}{1-x} = 4(1-x^2)\sqrt{y}$$

is to be solved for $x < 1$. Use the substitution $u = \sqrt{y}$ to find the general solution of the differential equation, expressing your answer in the form $y = f(x)$. [8]

6 (i) Use de Moivre's theorem to find an expression for $\cot 7\theta$ in terms of $\cot \theta$ and hence find the exact roots of the equation $u^6 - 21u^4 + 35u^2 - 7 = 0$. [7]

(ii) State the exact roots of the equation $v^3 - 21v^2 + 35v - 7 = 0$, justifying your answer. Hence find the exact value of

$$\frac{\cot^2\left(\frac{1}{14}\pi\right)\cot^2\left(\frac{3}{14}\pi\right) + \cot^2\left(\frac{3}{14}\pi\right)\cot^2\left(\frac{5}{14}\pi\right) + \cot^2\left(\frac{5}{14}\pi\right)\cot^2\left(\frac{1}{14}\pi\right)}{\cot\left(\frac{1}{14}\pi\right)\cot\left(\frac{3}{14}\pi\right)\cot\left(\frac{5}{14}\pi\right)} \quad [4]$$

- 7 The plane Π_1 passes through the points $(5, 2, -2)$, $(4, 0, -1)$ and $(2, 1, -3)$.

(i) Find a cartesian equation of the plane Π_1 . [5]

The line l_1 has equation $\frac{x}{2} = \frac{y-4}{-1} = \frac{z+3}{3}$.

(ii) Find the acute angle between Π_1 and l_1 . [3]

The line l_2 has equation $\mathbf{r} = \begin{pmatrix} p \\ 2 \\ 4 \end{pmatrix} + \lambda \begin{pmatrix} q \\ -6 \\ 12 \end{pmatrix}$ and lies in Π_1 .

(iii) Find the value of p and show that $q = 12$. [3]

The plane Π_2 is perpendicular to Π_1 and l_2 lies in Π_2 .

(iv) Find an equation of Π_2 , giving your answer in the form $\mathbf{r} \cdot \mathbf{n} = d$. [3]

- 8 (i) Show that, if $z \neq \pm 1$ and $z \neq 0$,

$$\sum_{r=1}^n z^{2r-1} = \frac{1 - z^{2n}}{z^{-1} - z}. \quad [2]$$

(ii) Hence show that, if $\sin \theta \neq 0$,

$$\sum_{r=1}^n \sin(2r-1)\theta = \frac{\sin^2 n\theta}{\sin \theta}. \quad [6]$$

(iii) Hence find the exact value of

$$\int_0^{\frac{1}{6}\pi} \frac{\sin^2 3\theta}{\sin \theta} d\theta. \quad [3]$$
