Mark Scheme for January 2011

Oxford Cambridge and RSA Examinations

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of pupils of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, OCR Nationals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by Examiners. It does not indicate the details of the discussions which took place at an Examiners' meeting before marking commenced.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the Report on the Examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

Any enquiries about publications should be addressed to:

Question			Answer	Marks	Guidance
1	(i)		x LHS RHS 1 2 > 1.557408 1.2 2.2 < 2.572152	M1 A1 **[2]**	no explicit explanation required
	(ii)		r 0 1 2 3 4 x_r 1.1 0.96476 0.442927 –0.52564 –1.58007	M1 A1 **[2]**	$r = 3$ required
	(iii)		e.g. re-arrange to $x = \arctan(1 + x)$ r 0 1 2 3 4 5 x_r 1.1 1.126377 1.131203 1.132076 1.132233 1.132261 1.132	B1 M1 A1 A1 **[4]**	
2			h | M | T 2 | *1.987467* | *1.354440* 1 | *1.830595* | **1.670954** 0.5 | | **1.750774** Simpson's rule $(2M + T) / 3$ **1.776458** **1.777381** Reference to justification/accuracy : 1.777 or 1.78	*T*: M1A1A1 *S*: M1A1A1 E1 A1 **[8]**	Lose 1 for any additional 'answer'(s) but do not penalise extrapolation
3	(i)		$h = 1$ $g'(0) = (2.0100 – 1.4509)/1 = 0.5591$ $h = 0.5$ $g'(0) = (1.6799 – 1.4509)/0.5 = 0.458$ Estimate with smaller h (0.458) likely to be more accurate: smaller h is more accurate (provided there is no great loss of significant figures)	B1 B1 B1 E1 **[4]**	
	(ii)		$h = 0.5$ $g'(0.5) = (2.0100 – 1.4509)/1 = 0.5591$ This estimate, central diff, likely to be more accurate than either of the forward diffs	M1 E1 **[2]**	

Question			Answer	Marks	Guidance
4	(i)		Max poss loss: 365 (or 366) times 0.01 pence: = 3.65 (or 3.66) pence Arises if each daily amount would round up but gets chopped down Average loss 1.825 (or 1.83) pence, because average is half of max.	B1 E1 B1 E1 **[4]**	
	(ii)		£150 000 divided by 1.825 pence: about 8.2 million (8 million) accounts	M1 A1 **[2]**	
5			x P(x) ΔP(x) Δ^2P(x) Δ^3P(x) *–1* *–11* **1** **–10** *1* **3** **3** **13** *12* **5** **44** **41** **28** *16* **7** **129** **85** **44** **16** **9** **274** **145** **60** **16** *11* *495* *221* *76* *16* **(i)** bold: Diff table 3rd diffs constant so cubic **(ii)** italic: working forwards working backwards	M1 A1 E1 B1 M1 A1 M1 A1 **[4] + [4]**	
6	(i)		x f g h abs err g rel err g abs err h rel err h 0.2 0.013351 0.013333 0.013423 –0.0000179 –0.0013424 0.0000716 0.0053600 0.1 0.003334 0.003333 0.003339 –0.0000011 –0.0003339 0.0000045 0.0013350 A1 A1 A1 A1 A1 A1 A1	abs M1 rel M1 **[9]**	f, g, h values may be implied
	(ii)		Errors in g and h are of opposite sign; g is about 4 times as accurate as h. x f (4g + h)/5 abs err rel err 0.2 0.013351 0.013351 –2.5E–08 –1.9E–06 0.1 0.003334 0.003334 –4E–10 –1.2E–07 A1 A1 A1	E1 E1 M1 **[6]**	
	(iii)		x / sin $x \approx 1.000\,000\,002 \approx 1$ $g(10^{-4}) = 3.33 \times 10^{-9}$ Subtraction of nearly equal quantities	B1 B1 E1 **[3]**	

Question			Answer	Marks	Guidance
7	(i)		f(0) = –1f(1) = 1 (hence root) f '(x) = $7x^6 + 5x^4$ which is zero only at $x = 0$. Convincing argument that this is not a turning point No turning points implies no other roots.  	B1 M1 A1 B1 E1 G2 **[7]**	
	(ii)		NR iteration: $x_{r+1} = x_r – (x_r^7 + x_r^5 – 1) / (7x_r^6 + 5x_r^4)$ r 0 1 2 x_r 0.6 1.51756 1.289164 On graph: tangent at 0.6, intersection at 1.5, ordinate & tangent, intersection at 1.3	B1 A1 A1 G4 **[7]**	
	(iii)		r 0 1 2 x_r 0.3 22.1703 19.00128 Comment: e.g. converging but initially very slow (or difficult to tell with only 2 iter'ns) r 0 1 2 x_r 0.9 0.890174 0.889891 Comment: e.g. almost converged, root very close to 0.89	 A1 E1 A1 E1 **[4]**
