### Mark Scheme for June 2011

---

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of pupils of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, OCR Nationals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by Examiners. It does not indicate the details of the discussions which took place at an Examiners' meeting before marking commenced.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the Report on the Examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

## Mark Scheme

June 2011

## comment

You should expect to follow through from one part to another unless the scheme says otherwise but not follow through within a part unless the scheme specifies this. Each script must be viewed as a whole at some stage so that

- (i) a candidate's writing of letters, digits, symbols on diagrams etc can be better interpreted;
- (ii) repeated mistakes can be recognised (e.g. calculator in wrong angle mode throughout – penalty 1 in the script and FT except given answers).

You are advised to 'set height' in *scoris*, particularly for question 7(ii). Questions 5 and 8(v) also spread onto two pages.

Q 4		mark	Comment
(i)		B1 B1 2	Any one force in correct direction correctly labelled with arrow <b>or</b> all forces with correct directions and arrows. A force may be replaced by its components if labelled correctly eg $mg\cos 20^\circ$ , $mg\sin 20^\circ$ . All correct (Accept words for labels and weight as $W$ , $mg$ , 147 (N)) No extra or duplicate forces. Do not allow force <b>and</b> its components unless components are clearly distinguished, eg by broken lines.
(ii)	<b>Either</b> Up the plane $P\cos 20^\circ - 15 \times 9.8 \times \sin 20^\circ = 0$  $P = 53.50362\dots$ so 53.5 (3 s. f.)	M1 A1 A1 3	Attempt to resolve at least one force up plane. Accept mass not weight. No extra forces. If other directions used, all forces must be present but see below for resolving vertically and horizontally. Accept only error as consistent $s \leftrightarrow c$ . Cao
	<b>Or</b> Vertically and horizontally $R\cos 20^\circ = 15g$ , $R\sin 20^\circ = P$ Eliminate $R$  $P = \frac{15g}{\cos 20^\circ} \times \sin 20^\circ$ $P = 53.5$ (3.s.f.)	M1 A1 A1 3	Attempt to resolve all forces both horizontally and vertically and attempt to combine into a single equation. No extra forces. Accept $s \leftrightarrow c$ . Accept mass not weight. Accept only error as consistent $s \leftrightarrow c$ .  Cao
	<b>Or</b> Triangle of forces Triangle drawn and labelled $\frac{P}{15g} = \tan 20^\circ$ $P = 53.5$ (3.s.f.)	M1 A1 A1 3	All sides must be labelled and in correct orientation; three forces only; condone no arrows  Oe  Cao
