## **Mark Scheme for January 2012**

---

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, OCR Nationals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by Examiners. It does not indicate the details of the discussions which took place at an Examiners' meeting before marking commenced.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the Report on the Examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

Mark Scheme

January 2012

**Annotations**

| <b>Annotation in scoris</b>               | <b>Meaning</b>   |
|---|--|
| ✓ and ✕                                   |  |
| BOD                                       | Benefit of doubt   |
| FT  | Follow through   |
| ISW                                       | Ignore subsequent working                                |
| M0, M1                                    | Method mark awarded 0, 1                                 |
| A0, A1                                    | Accuracy mark awarded 0, 1                               |
| B0, B1                                    | Independent mark awarded 0, 1                            |
| SC  | Special case   |
| ^   | Omission sign  |
| MR  | Misread  |
| Highlighting                              |  |
|   |  |
| <b>Other abbreviations in mark scheme</b> | <b>Meaning</b>   |
| E1  | Mark for explaining                                      |
| U1  | Mark for correct units                                   |
| G1  | Mark for a correct feature on a graph                    |
| M1 dep*                                   | Method mark dependent on a previous mark, indicated by * |
| cao                                       | Correct answer only                                      |
| oe  | Or equivalent  |
| rot                                       | Rounded or truncated                                     |
| soi                                       | Seen or implied  |
| www                                       | Without wrong working                                    |

**Subject-specific Marking Instructions**

- a Annotations should be used whenever appropriate during your marking.

**The A, M and B annotations must be used on your standardisation scripts for responses that are not awarded either 0 or full marks.** It is vital that you annotate standardisation scripts fully to show how the marks have been awarded.

For subsequent marking you must make it clear how you have arrived at the mark you have awarded.

- b An element of professional judgement is required in the marking of any written paper. Remember that the mark scheme is designed to assist in marking incorrect solutions. Correct *solutions* leading to correct answers are awarded full marks but work must not be judged on the answer alone, and answers that are given in the question, especially, must be validly obtained; key steps in the working must always be looked at and anything unfamiliar must be investigated thoroughly.

Correct but unfamiliar or unexpected methods are often signalled by a correct result following an *apparently* incorrect method. Such work must be carefully assessed. When a candidate adopts a method which does not correspond to the mark scheme, award marks according to the spirit of the basic scheme; if you are in any doubt whatsoever (especially if several marks or candidates are involved) you should contact your Team Leader.

- c The following types of marks are available.

**M**

A suitable method has been selected and *applied* in a manner which shows that the method is essentially understood. Method marks are not usually lost for numerical errors, algebraic slips or errors in units. However, it is not usually sufficient for a candidate just to indicate an intention of using some method or just to quote a formula; the formula or idea must be applied to the specific problem in hand, eg by substituting the relevant quantities into the formula. In some cases the nature of the errors allowed for the award of an M mark may be specified.

**A**

Accuracy mark, awarded for a correct answer or intermediate step correctly obtained. Accuracy marks cannot be given unless the associated Method mark is earned (or implied). Therefore M0 A1 cannot ever be awarded.

**B**

Mark for a correct result or statement independent of Method marks.

**E**

A given result is to be established or a result has to be explained. This usually requires more working or explanation than the establishment of an unknown result.

Unless otherwise indicated, marks once gained cannot subsequently be lost, eg wrong working following a correct form of answer is ignored. Sometimes this is reinforced in the mark scheme by the abbreviation isw. However, this would not apply to a case where a candidate passes through the correct answer as part of a wrong argument.

- d When a part of a question has two or more 'method' steps, the M marks are in principle independent unless the scheme specifically says otherwise; and similarly where there are several B marks allocated. (The notation 'dep \*' is used to indicate that a particular mark is dependent on an earlier, asterisked, mark in the scheme.) Of course, in practice it may happen that when a candidate has once gone wrong in a part of a question, the work from there on is worthless so that no more marks can sensibly be given. On the other hand, when two or more steps are successfully run together by the candidate, the earlier marks are implied and full credit must be given.
- e The abbreviation ft implies that the A or B mark indicated is allowed for work correctly following on from previously incorrect results. Otherwise, A and B marks are given for correct work only — differences in notation are of course permitted. A (accuracy) marks are not given for answers obtained from incorrect working. When A or B marks are awarded for work at an intermediate stage of a solution, there may be various alternatives that are equally acceptable. In such cases, exactly what is acceptable will be detailed in the mark scheme rationale. If this is not the case please consult your Team Leader.

Sometimes the answer to one part of a question is used in a later part of the same question. In this case, A marks will often be 'follow through'. In such cases you must ensure that you refer back to the answer of the previous part question even if this is not shown within the image zone. You may find it easier to mark follow through questions candidate-by-candidate rather than question-by-question.

- f Wrong or missing units in an answer should not lead to the loss of a mark unless the scheme specifically indicates otherwise. Candidates are expected to give numerical answers to an appropriate degree of accuracy, with 3 significant figures often being the norm. Small variations in the degree of accuracy to which an answer is given (e.g. 2 or 4 significant figures where 3 is expected) should not normally be penalised, while answers which are grossly over- or under-specified should normally result in the loss of a mark. The situation regarding any particular cases where the accuracy of the answer may be a marking issue should be detailed in the mark scheme rationale. If in doubt, contact your Team Leader.
- g Rules for replaced work
 

If a candidate attempts a question more than once, and indicates which attempt he/she wishes to be marked, then examiners should do as the candidate requests.

If there are two or more attempts at a question which have not been crossed out, examiners should mark what appears to be the last (complete) attempt and ignore the others.

NB Follow these maths-specific instructions rather than those in the assessor handbook.

- h For a *genuine* misreading (of numbers or symbols) which is such that the object and the difficulty of the question remain unaltered, mark according to the scheme but following through from the candidate's data. A penalty is then applied; 1 mark is generally appropriate, though this may differ for some units. This is achieved by withholding one A mark in the question.

Note that a miscopy of the candidate's own working is not a misread but an accuracy error.

## Mark Scheme

January 2012

| Question |       |  | Answer  | Marks  | Guidance   | Additional Guidance  |
|----------|-------|--|---|--|--|--|
| 7        | (iii) |  | <p>Lower limit <math>4.2 - (1.5 \times 1.6) = 1.8</math><br/> Upper limit <math>5.8 + (1.5 \times 1.6) = 8.2</math><br/> So there are one or more outliers (if any lamb weighs more than 8.2 kg)</p> <p>Should not be disregarded because:<br/> <b>‘Nothing to suggest they are not genuine items of data’</b><br/> <b>Allow other convincing reasons such as very few so will not make much difference</b></p> | <p>B1<br/> B1<br/> E1</p> <p>E1</p> <p>[4]</p>                                     | <p>For 1.8 ft<br/> For 8.2 ft<br/> Dep on their 1.8 and 8.2<br/> <b>Allow any number of outliers <math>\leq 5</math></b></p> <p>Indep <b>Must give reason.</b></p>                                       | <p>Any use of <u>median</u> <math>\pm 1.5</math> IQR scores B0 B0 E0<br/> <b>E0 if say some outliers at bottom end, unless lower limit <math>&gt; 2.0</math></b><br/> If FT leads to limits above 9.0 <u>and</u> below 2.0 then E0<br/> No marks for <math>\pm 2</math> or 3 IQR<br/> <b>With 4.3 and 5.8 lower = 2.05 and upper = 8.05</b><br/> In this part FT their values from (ii) if sensibly obtained but not from location ie 12.5, 37.5<br/> No marks for use of mean <math>\pm 2s</math></p> |
| 7        | (iv)  |  | <p>Median for Welsh Mountain = 3.6<br/> IQR for Welsh Mountain = 0.8<br/> Welsh Mountain lambs have lower average weight than crossbred</p> <p>Welsh Mountain lambs also have lower variation in weight than crossbred</p>  | <p>B1<br/> B1<br/> E1<br/> <b>indep</b></p> <p>E1<br/> <b>indep</b></p> <p>[4]</p> | <p>Must imply average or CT, not just median.<br/> <b>Allow generally lighter</b><br/> <b>Must imply spread or variation, not just IQR or range</b><br/> <b>Allow correct comment on consistency</b></p> | <p>FT their medians<br/> FT their IQRs<br/> Can get max B1B0E1E1 for use of range</p>  |
| 7        | (v)   |  | <p><b>Median unchanged</b><br/> <b>IQR unchanged OR range or spread increased</b></p>   | <p>E1<br/> E1</p> <p>[2]</p>   | <p>even if used IQR in (iv)</p>  | <p><b>E2 for ‘Both comparisons remain the same’</b><br/> <b>E1 for ‘the range remains smaller’</b></p>   |

4766

Mark Scheme

January 2012

| Question |      |  | Answer  | Marks                                      | Guidance   | Additional Guidance   |
|----------|------|--|---|--|--|---|
| 7        | (vi) |  | $P(\text{Crossbred} > 3.9) = \frac{165}{200}$ $P(\text{Welsh Mountain} > 3.9) = \frac{1}{4}$ $P(\text{Both} > 3.9) = \frac{165}{200} \times \frac{1}{4} = \frac{165}{800} = \frac{33}{160} = 0.206$ | B1<br><br>B1<br>M1<br><br>A1<br><b>[4]</b> | For product of their probabilities, provided one is correct<br>CAO | Allow 162 to 165 out of 200<br><br><b>Allow answers in range 0.2025 to 0.20625 with correct working</b> |

**NOTE RE OVER-SPECIFICATION OF ANSWERS**

If answers are grossly over-specified, deduct the final answer mark in every case. Probabilities should also be rounded to a sensible degree of accuracy. In general final non probability answers should not be given to more than 4 significant figures. Allow probabilities given to 5 sig fig.

**Additional notes re Q6 parts iii, iv:**Smallest critical region method for part (iii):

Smallest critical region that 1 could fall into has size 0.0243 gets B1,

Smallest critical region that 2 could fall has size 0.0913 gets B1, This is > 5% or above < 5% gets M1, A1 as per scheme

Use of k method with no probabilities quoted:

$P(X \leq k) > 5\%$  and  $P(X \leq k - 1) < 5\%$  followed by  $k = 2$  gets SC1

so CR is {0, 1} gets another SC1 dep on first SC1

Use of k method with one probability quoted:

Mark as per scheme – max B0B1M1A1

Two tailed test with  $H_1: p \neq 0.25$ 

Gets SC2 for fully correct FT with working as follows  $P(X \leq 1) = 0.0243 < 0.025$  and  $P(X \geq 10) = 0.0139 > 0.025$  B1 CR is {0,1, 10, 11, ..., 20}

(iv) Final 2 marks Max M1A1.

4766

Mark Scheme

January 2012

Two tailed test done but with correct  $H_1: p < 0.25$

(ii) gets max B1B1B1E1

(iii) if compare with 5% ignore work on upper tail and mark lower tail as per scheme but if include upper tail in CR then A0

if compare with 2.5% no marks B0B0M0A0

(iv) Final 2 marks can get M1A1 if correct CR, or SC2 if they start again, provided that they compare with 5%, not 2.5%.

Lower or upper tailed test with  $H_1: p > 0.25$  and 6(ii)B wrong way around

(ii) gets max B1B1B0E0

(iii) no marks B0B0M0A0

(iv) Final 2 marks get M0A0

Lower tailed test with  $H_1: p > 0.25$  and 6(ii)B right way around

(ii) gets max B1B1B0E0, note E0, not E1

(iii) and (iv) Mark as per scheme, so full marks possible

Line diagram method for (iii)

No marks unless some 0.0243 shown on diagram, then B1 for squiggly line between 1 and 2 or on 1, B1dep for arrow pointing to left, M1 0.0243 seen on diagram from squiggly line or from 1, A1 for CR written down in words/symbols. **If 0.0243 and 0.0913 both seen and no other marks earned give B1.**

(iv) M1A1 as per scheme

Bar chart method for (iii)

No marks unless 0.0243 shown on diagram, then B1 for line clearly on boundary between 1 and 2 or within 1 block, B1dep for arrow pointing to left, M1 0.0243 seen on diagram from boundary line or from 1, A1 for CR written down in words/symbols. **If 0.0243 and 0.0913 both seen and no other marks earned give B1.**

(iv) M1A1 as per scheme.
