a scientific or graphical calculator

READ INSTRUCTIONS OVERLEAF

INSTRUCTIONS

Write your name, centre number and candidate number in the boxes on the front page. Please write clearly and in capital letters.

Use black ink. HB pencil may be used for graphs and diagrams only.

Answer ALL the questions.

Read each question carefully. Make sure you know what you have to do before starting your answer.

Write your answer to each question in the space provided. If additional space is required, you should use the lined page(s) at the end of this booklet. The question number(s) must be clearly shown.

INFORMATION

The total mark for this paper is 90.

The marks for each question are shown in brackets [].

Quality of extended response will be assessed in the question marked with an asterisk (*).

BLANK PAGE

SECTION A

Answer ALL the questions.

- 1 Define what is meant by 'acclimatisation to high altitude' and state ONE sporting activity in which performers would benefit from it.

[2]

- 2 Explain why ATP plays a major role in the performance of a smash in badminton.

[2]

- 3 Identify TWO types of spin and the effect of each on a table tennis ball in flight.

[2]

4 Compare explosive strength and strength endurance.

[2]

5 Describe how limb kinematics can be used to enhance performance in sport.

[2]

SECTION B

Answer **ALL** the questions.

6 Fig. 1 shows a netballer preparing to shoot.

Fig. 1

(a) Complete the table below to analyse the position of the right wrist. [6]

Joint type	
Articulating bones	
Plane of movement	
Movement	
Agonist	
Antagonist	

(b) Explain what the energy continuum is and justify the position of ONE sporting activity on the energy continuum.

[4]

- (c) At the start of an endurance cycling event a cyclist will experience a redistribution of cardiac output.**

Explain how and why the vascular shunt mechanism redistributes blood in a cyclist as they begin cycling at the start of the event.

[5]

(d) (i) Describe the mechanics of breathing which cause inspiration at rest.

[3]

(ii) Explain why a trained athlete will have a lower minute ventilation at rest than an untrained individual, despite having identical tidal volumes.

[2]

- 7 (a) Blood doping is an illegal physiological aid used by some athletes to enhance performance.**

Outline how blood doping is carried out, and give ONE physiological benefit and ONE risk involved.

[3]

- (b) A dislocated shoulder in rugby is an example of an acute sporting injury.**

(i) Compare acute and chronic injuries.

[2]

(ii) Apart from dislocation, give a sporting example of an acute injury AND a chronic injury.

[1]

(iii) Outline the correct medical treatment a sports coach should apply to a dislocation injury.

[3]

(c) Fig. 2 shows a gymnast performing the splits.

Fig. 2

(i) Describe the factors affecting flexibility that enable the gymnast to perform the splits.

[3]

- (ii) Describe TWO adaptations from training that have enhanced this gymnast's flexibility by increasing the range of motion at the hip joint.**

[2]

[6]

- 8 (a) Define Newton's third law of motion and apply it to a sporting example of your choice.**

[3]

- (b) (i) Using practical examples, explain how the elbow joint can act as a fulcrum for two different lever systems.**

[4]

- (ii) Calculate the moment of inertia during a biceps curl, given a total mass of 10 kg at a perpendicular distance (r) of 0.5 metres from the weight to the fulcrum. Show your workings.

[2]

- (c) Fig. 3 shows a graph of the relationship between moment of inertia, angular velocity and angular momentum during the performance of a tucked somersault.

Fig. 3

- (i) Explain the shape of the graph, with reference to the tucked somersault, from A to B.**

[3]

- (ii) Explain, using the angular analogue of Newton's first law of motion, the concept of conservation of angular momentum.**

[3]

- (d) (i) Sketch a free body diagram in the box below, showing the horizontal and vertical forces acting on a football in flight. [2]**

- (ii) Sketch a diagram in the box below to show how you would represent the resultant force acting on the football in flight. [3]**

SECTION C

- 9* A team game such as basketball provides opportunities for recovery from high intensity work both during and after the match.**

Outline the recovery processes that occur in the first three minutes after exercise and, using a team game of your choice, evaluate the strategies that a player or coach can use to maximise recovery.

Evaluate nutritional ergogenic aids that help the recovery process. [20]
