

Oxford Cambridge and RSA

**Tuesday 14 May 2019 – Morning**

**AS Level Physics A**

**H156/01 Breadth in physics**

**Time allowed: 1 hour 30 minutes**

**You must have:**

- the Data, Formulae and Relationships Booklet (sent with general stationery)

**You may use:**

- a scientific or graphical calculator
- a ruler (cm/mm)

Please write clearly in black ink. **Do not write in the barcodes.**

Centre number

--	--	--	--	--

Candidate number

--	--	--	--

First name(s)

\_\_\_\_\_

Last name

\_\_\_\_\_

**INSTRUCTIONS**

- Use black ink. HB pencil may be used for graphs and diagrams.
- Answer **all** the questions.
- Where appropriate, your answers should be supported with working. Marks may be given for a correct method even if the answer is incorrect.
- Write your answer to each question in the space provided. If additional space is required, use the lined page(s) at the end of this booklet. The question number(s) must be clearly shown.

**INFORMATION**

- The total mark for this paper is **70**.
- The marks for each question are shown in brackets [ ].
- This document consists of **20** pages.

## SECTION A

You should spend a maximum of 25 minutes on this section.

Answer **all** the questions.

Write your answer to each question in the box provided.

1 The table below shows four physical quantities and their units.

Which row is correct?

	Physical quantity	Unit
A	strain	pascal
B	charge	coulomb
C	power	joule
D	force constant	newton

Your answer

[1]

2 Four students each carry out an experiment to determine the acceleration of free fall  $g$ .

Which is the **least** accurate value?

A  $(9.0 \pm 1.0) \text{ ms}^{-2}$   
 B  $(9.5 \pm 0.1) \text{ ms}^{-2}$   
 C  $(9.6 \pm 0.4) \text{ ms}^{-2}$   
 D  $(9.7 \pm 0.2) \text{ ms}^{-2}$

Your answer

[1]

3 A uniform concrete slab is placed on two supports. The slab sags due to its own weight.

Which point, **A**, **B**, **C** or **D**, of the slab is under maximum compression?

Your answer

[1]

4 The variation with time  $t$  of the force  $F$  acting on a ball is shown below.

Which statement is **not** correct?

- A The area under the graph is equal to the work done by the force  $F$ .
- B The ball has maximum acceleration at  $t = 5.0 \times 10^{-3}$  s.
- C The area under the graph is equal to impulse.
- D The area under the graph has units  $\text{kg ms}^{-1}$ .

Your answer

[1]

5 The diagram below shows a rotating steam generator.

The steam ejected from the nozzles provides a couple. The force at each nozzle is 0.12 N. The perpendicular distance between the nozzles is  $8.2 \times 10^{-2}$  m.

What is the work done by the forces as the steam generator completes one revolution?

- A 0 J
- B  $9.8 \times 10^{-3}$  J
- C  $3.1 \times 10^{-2}$  J
- D  $6.2 \times 10^{-2}$  J

Your answer

[1]

6 Which circuit below can be used to monitor the variation of light intensity in a room?

Your answer

[1]

7 A household is planning to change all their 60W filament bulbs to 12W LED bulbs. The household has a total of 10 bulbs. Each bulb will be used for about 2000 hours in one year. The cost of 1 kWh is 15.4 p.

What would the annual saving be?

- A £7.39
- B £36.96
- C £147.84
- D £184.80

Your answer

[1]

8 A force of 12 N moves an object at an angle  $\theta$  to the force. The object travels 9.6 m and the work done by the force is 52 J.

What is the angle  $\theta$ ?

- A  $1.1^\circ$
- B  $27^\circ$
- C  $63^\circ$
- D  $90^\circ$

Your answer

[1]

9 The resistance of a wire of length  $L$  is  $3.00\Omega$ .  
 The wire is extended so that its length becomes  $1.50L$ . Its volume remains the same.

What is the resistance of the extended wire?

- A  $2.00\Omega$
- B  $3.00\Omega$
- C  $4.50\Omega$
- D  $6.75\Omega$

Your answer

[1]

10 The diagram below shows a potential divider circuit.

The minimum resistance of the variable resistor is zero and its maximum resistance is  $3R$ , where  $R$  is the resistance of the fixed resistor.

The power supply has electromotive force (e.m.f.)  $4.0\text{V}$  and negligible internal resistance. The voltmeter has infinite resistance.

The resistance of the variable resistor is changed from its minimum to its maximum value.

How does the voltmeter reading change?

- A from  $0\text{V}$  to  $1.0\text{V}$
- B from  $0\text{V}$  to  $3.0\text{V}$
- C from  $1.0\text{V}$  to  $4.0\text{V}$
- D from  $3.0\text{V}$  to  $4.0\text{V}$

Your answer

[1]

11 The waves from the sources **X** and **Y** are coherent and have wavelength 10.0 cm. The waves are in phase at **X** and **Y**.

Which row gives the correct conditions for constructive interference at point **Z**?

	Distance <b>XZ</b> /cm	Distance <b>YZ</b> /cm
<b>A</b>	60.0	75.0
<b>B</b>	75.0	95.0
<b>C</b>	90.0	65.0
<b>D</b>	100.0	135.0

Your answer

[1]

12 The table shows the refractive index  $n$  of four transparent materials **A**, **B**, **C** and **D**.

Which material has the **smallest** critical angle?

Material	<b>A</b>	<b>B</b>	<b>C</b>	<b>D</b>
$n$	2.01	1.87	1.60	1.33

Your answer

[1]

13 The frictional force acting on an object falling vertically through water is directly proportional to its speed squared.

What is the correct relationship between  $P$ , the rate of work done against the frictional force, and the speed  $v$  of the object?

**A**  $P \propto v^{-1}$

**B**  $P \propto v$

**C**  $P \propto v^2$

**D**  $P \propto v^3$

Your answer

[1]

14 In a particle-accelerator electrons are accelerated through a potential difference of 120 kV. The electron beam current is  $8.0 \mu\text{A}$ .

What is the total energy transferred to the electrons in a time of 2.0 hours?

- A 0.96 J
- B 120 J
- C 1900 J
- D 6900 J

Your answer

[1]

15 The electric charge on particles is quantised and a multiple of the elementary charge.

Which charge on a particle is possible?

- A  $1.0 \times 10^{-19} \text{ C}$
- B  $4.0 \times 10^{-19} \text{ C}$
- C  $8.0 \times 10^{-19} \text{ C}$
- D  $8.8 \times 10^{-19} \text{ C}$

Your answer

[1]

16 Two forces act in the plane of this paper.

The magnitude and direction of the two forces are shown below.

The two forces are added together.

Which diagram shows the correct resultant?

Your answer

[1]

17 Power has base units  $\text{kg m}^2 \text{s}^{-3}$ .

What are the base units for intensity?

A  $\text{kg s}^{-3}$

B  $\text{kg m s}^{-3}$

C  $\text{kg m}^2 \text{s}^{-3}$

D  $\text{kg m}^4 \text{s}^{-3}$

Your answer

[1]

18 A ball of diameter 2.50 cm is held above the ground. The bottom of the ball is 10.2 cm above the ground. The ball is released from rest.  
Air resistance has negligible effect on the motion of the ball.

What is the time taken for the ball to reach the ground?

- A 0.021 s
- B 0.144 s
- C 0.152 s
- D 0.161 s

Your answer

[1]

19 Which of the following waves can be polarised and has a typical wavelength of about a few centimetres?

- A microwaves
- B ultraviolet
- C sound
- D visible light

Your answer

[1]

20 Stationary sound waves are produced in the air inside a tube. The tube is closed at one end.

Which pattern of nodes (N) and antinodes (A) is likely to be correct?

A

B

C

D

Your answer

[1]

10

## SECTION B

Answer **all** the questions.

21 (a) For a system to be in equilibrium, the resultant force must be zero.

State another condition that must be satisfied for the system to be in equilibrium.

.....  
.....

[1]

(b) Fig. 21.1 shows a ball at **rest** on a horizontal table.

Fig. 21.1

The weight of the ball is  $W$  and the normal contact force on the ball is  $N$ .

(i) According to Newton's third law of motion,  $W$  is one of the forces in a pair of equal and opposite forces.

Name the object that experiences a force of magnitude  $W$  but in the opposite direction to  $W$ .

.....

[1]

(ii) According to a student,  $W = N$  is a consequence of Newton's third law of motion.

State why this is incorrect.

.....

[1]

(c) Fig. 21.2 shows a model dolphin in a museum. The dolphin is held in equilibrium by two cables **A** and **B**.

Fig. 21.2

## 11

The tension in cable **A** is 68.0 N and it makes an angle of  $10^\circ$  to the horizontal. The tension in cable **B** is 87.4 N and it makes an angle of  $50^\circ$  to the vertical.

(i) Calculate the **total** vertical force  $F$  supplied by cables **A** and **B** by resolving the tensions in cables **A** and **B**.

$$F = \dots \text{ N} \quad [2]$$

(ii) Use your answer from (i) to calculate the mass  $m$  of the dolphin.

$$m = \dots \text{ kg} \quad [2]$$

(iii) The cables **A** and **B** have the same length and cross-sectional area.  
 The material of cable **B** has Young modulus  $1.29E$ , where  $E$  is the Young modulus of the material of cable **A**.  
 Both cables obey Hooke's law.

Calculate the ratio 
$$\frac{\text{extension of cable B}}{\text{extension of cable A}}$$
.

$$\text{ratio} = \dots \quad [2]$$

22 A metal ball is released from rest. It falls vertically towards the ground. Fig. 22 shows the variation with time  $t$  of the displacement  $s$  of the ball.

Fig. 22

Air resistance has negligible effect on the motion of the ball.

The ball hits the ground at  $t = 0.50\text{ s}$ .

During the collision, the ball is in contact with the ground for a time of  $1.8\text{ ms}$ .

The mass of the ball is  $56\text{ g}$ .

(a) Describe and explain the variation of the velocity of the ball from  $t = 0.20\text{ s}$  to  $t = 0.70\text{ s}$ .

No calculations are required.

---

---

---

---

---

---

---

---

[4]

13

(b) Use an equation of motion to show that the speed of the ball is  $4.9 \text{ ms}^{-1}$  just before it hits the ground.

[2]

(c) Draw a suitable tangent to the curve in Fig. 22 and show that the **rebound** speed of the ball is about  $3.5 \text{ ms}^{-1}$ .

[3]

(d) Calculate the average resultant force acting on the ball during the collision.

force = ..... N [2]

23 (a) A cell of electromotive force (e.m.f.) 1.4 V and internal resistance 0.62  $\Omega$  is connected to resistor **A** and wire **B** as shown in Fig. 23.1.

Fig. 23.1

The resistance of resistor **A** is 1.8  $\Omega$  and resistance per unit length of wire **B** is 9.5  $\Omega \text{ m}^{-1}$ . The length of wire **B** is 40 cm.

(i) Calculate the current  $I$  in the circuit. Write your value to an appropriate number of significant figures.

$$I = \dots \text{ A} \quad [4]$$

(ii) Calculate the ratio  $\frac{\text{power dissipated in the internal resistance}}{\text{total power supplied by cell}}$ .

$$\text{ratio} = \dots \quad [2]$$

(b) This question is about two identical filament lamps. Fig. 23.2 shows the  $I$ - $V$  characteristic of each lamp.

Fig. 23.2

The lamps are connected to a 6.0V supply of negligible internal resistance in **series**, as shown in Fig. 23.3, and then in **parallel**, as shown in Fig. 23.4.

Fig. 23.3

Fig. 23.4

The current from the supply in the series circuit is  $I_S$  and the current from the supply in the parallel circuit is  $I_P$ .

$I_P$  is found to be almost 3 times greater than  $I_S$ .

Use Fig. 23.2 to explain why  $I_P$  is almost 3 times greater than  $I_S$ .  
Show any calculations and your reasoning below.

Fig. 23.3

Fig. 23.4

[4]

24 (a) You are provided with a rectangular block of plastic.

Describe how you can use a ray-box (or a laser beam), together with other equipment available in the laboratory, to accurately determine the refractive index of the plastic block.

.....

.....

.....

.....

.....

.....

.....

.....

.....

[3]

(b) The speed of sound in air can be determined by forming stationary waves in the laboratory. Fig. 24.1 shows an arrangement used by a student to determine the speed of sound  $v$ .

Fig. 24.1

A loudspeaker is placed in front of a smooth vertical wall in the laboratory. The loudspeaker is connected to a signal generator.

**Stationary waves** of frequency  $f$  are formed in the space between the wall and the loudspeaker.

A microphone is used to determine the mean separation  $L$  between adjacent nodes.

Fig. 24.2 shows the data plotted by the student.

**Fig. 24.2**

(i) Draw a straight line of best fit and determine the gradient of this line.

gradient = ..... Hz m [2]

(ii) Explain why the gradient of the line is  $\frac{v}{2}$ , where  $v$  is the speed of sound.

..... [2]

**Question 24 continues on the next page.**

18

(iii) Use your answer in (i) and the information given in (ii) to determine  $v$ .

$$v = \dots \text{ ms}^{-1} \quad [1]$$

(iv) The smaller values of  $L$  are much more difficult to determine with the microphone in this experiment and this produces large percentage uncertainty in the values of  $\frac{1}{L}$ .  
Suggest how this percentage uncertainty may be reduced in this experiment.

.....  
.....  
.....

[2]

25 (a) State **one** piece of evidence for the wave-like behaviour of electrons.

.....  
.....

[1]

(b) In an electron-gun, each electron is accelerated to a maximum kinetic energy of 210 eV.

(i) Show that the final speed of each electron is about  $9 \times 10^6 \text{ ms}^{-1}$ .

[3]

(ii) Calculate the de Broglie wavelength  $\lambda$  of each electron.

$$\lambda = \dots \text{ m [2]}$$

(c) Electromagnetic waves interact with matter as photons.

Explain the photoelectric effect using ideas of **photons**, **conservation of energy** and **work function**.

[4]

END OF QUESTION PAPER

### ADDITIONAL ANSWER SPACE

If additional space is required, you should use the following lined page(s). The question number(s) must be clearly shown in the margin(s).

Oxford Cambridge and RSA
