READ INSTRUCTIONS OVERLEAF

INSTRUCTIONS

Use black ink.

Complete the boxes on the front page with your name, centre number and candidate number.

Answer ALL the questions.

Write your answer to each question in the space provided. If additional space is required, use the lined page(s) at the end of this booklet. The question number(s) must be clearly shown.

INFORMATION

The total mark for this paper is 105.

The marks for each question are shown in brackets [].

Quality of extended responses will be assessed in questions marked with an asterisk (*).

SECTION A: Core studies

Answer ALL the questions.

- 1 (a) In Bocchiaro et al.'s study on disobedience and whistleblowing, eight pilot tests were carried out before the main study:**

Explain why Bocchiaro carried out these pilot tests.

[2]

- (b) In Bocchiaro et al.'s study into disobedience and whistleblowing, a sample of 149 students were selected for the main study:**

Outline ONE way this study may be considered ethnocentric.

[2]

- 2 (a) In Levine et al.'s study into cross-cultural altruism, four community variables were recorded:**

Describe how TWO of the community variables were measured.

[4]

- (b) Explain how Levine et al.'s study into cross-cultural altruism informs our understanding of cultural diversity in helping behaviour.**

[3]

- 3 (a) In Loftus and Palmer's study on eyewitness testimony a laboratory experiment was used.**

Describe why Loftus and Palmer's study is considered a laboratory experiment.

[2]

- (b) Explain ONE weakness of using a laboratory experiment for this study.**

[2]

- 4 (a) Bandura et al.'s study on the transmission of aggression is based on the principles of social learning theory.

Outline social learning theory.

[3]

- (b) Outline how the results of Bandura et al.'s study on the transmission of aggression support social learning theory.

[2]

5 Outline how Lee et al.'s study links to the developmental area in psychology.

[2]

- 6 (a) From Sperry's 'split brain' study into the psychological effects of hemisphere disconnection:**

Outline ONE way the results may be considered valid.

[2]

- (b) Casey et al.'s study examined behavioural and neural correlates of delay of gratification using functional magnetic resonance imaging (fMRI):**

Outline how delay of gratification is linked to regions in the brain.

[3]

7 Outline ONE difference between Blakemore and Cooper's study on the impact of early visual experience and Maguire's taxi driver study.

[4]

8 (a) From Freud's study of Little Hans:

What is meant by the term Oedipus complex?

[2]

(b) Outline ONE piece of evidence that suggests Little Hans was experiencing the Oedipus complex.

[2]

SECTION B: Areas, perspectives and debates

Answer ALL the questions.

- 9 (a) Outline the different positions of the ‘psychology as a science’ debate.**

[4]

- (b) Outline how ONE core study challenges the view that psychology can be considered a science. Support your answer with evidence from your chosen study.**

[4]

- (c)* Discuss the extent to which psychology can be considered a science. Use examples from appropriate core studies to support your answer.**
- [15]**

[illegible]

- (d) Compare the biological area to the behaviourist perspective. Use examples from appropriate core studies to support your answer. [8]**

(e) Describe how the biological area is reductionist. Support your answer with evidence from ONE appropriate core study.

[4]

BLANK PAGE

SECTION C: Practical applications

Answer ALL the questions.

An experiment in discrimination (the unjust or prejudicial treatment of different groups of people)

A psychology teacher splits her class of 20 students into two groups based on the colour of their eyes to test if this would lead to one group discriminating against the other. The blue-eyed group are told they are the superior group; they are her best students. The blue-eyed students are given extra support from the teacher and always praised for their behaviour. The brown-eyed children are set the same tasks in lessons, but are expected to work in silence without support. When a brown-eyed student asks for support with the lesson activity, the teacher points out that no blue-eyed children have asked for support; she says openly to the class “Not following instructions and low intelligence are clearly traits of brown-eyed students”. In response to this the blue-eyed students laughed.

During the study, the brown-eyed students became withdrawn, angry and the quality of their work declined. The blue-eyed children exceeded their predicted grades. The blue-eyed children went along with the situation even though they knew it was wrong. A brown-eyed student forgot their pencil case and one blue-eyed student remarked “that’s the sort of thing a brown-eyed student would do”.

- 10 (a) Outline ONE possible reason why it was necessary to divide the students into a superior and inferior group to test for discrimination in this study. Justify your answer in relation to the source.**

[3]

- (b) Outline ONE possible reason the blue-eyed students 'exceeded their predicted grades'. Support your answer with evidence from the source.**

[3]

[6]

20

- (d) Outline ONE reason the blue-eyed children ‘went along with the situation even though they knew it was wrong’. Support your answer with evidence from the source.**

[3]

- (e) Explain how the source is relevant to the social area of psychology. Support your answer with evidence from the source.**

[4]
