Candidates answer on the Answer Booklet

OCR Supplied Materials:

- 16 page Answer Booklet
- Graph paper

Other Materials Required:

None

Friday 5 June 2009

Afternoon

Duration: 2 hours

* 6 9 9 3 *

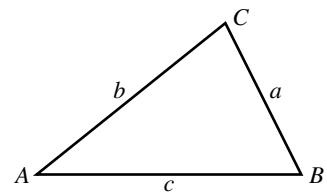

INSTRUCTIONS TO CANDIDATES

- Write your name clearly in capital letters, your Centre Number and Candidate Number in the spaces provided on the Answer Booklet.
- Use black ink. Pencil may be used for graphs and diagrams only.
- Read each question carefully and make sure that you know what you have to do before starting your answer.
- Answer **all** the questions.
- Do **not** write in the bar codes.
- You are permitted to use a scientific or graphical calculator in this paper.
- Final answers should be given correct to three significant figures where appropriate.

INFORMATION FOR CANDIDATES

- The number of marks is given in brackets [] at the end of each question or part question.
- You are advised that an answer may receive **no marks** unless you show sufficient detail of the working to indicate that a correct method is being used.
- The total number of marks for this paper is **100**.
- This document consists of **8** pages. Any blank pages are indicated.

Formulae Sheet: 6993 Additional Mathematics

In any triangle ABC **Cosine rule** $a^2 = b^2 + c^2 - 2bc \cos A$ **Binomial expansion**When n is a positive integer

$$(a + b)^n = a^n + \binom{n}{1} a^{n-1} b + \binom{n}{2} a^{n-2} b^2 + \dots + \binom{n}{r} a^{n-r} b^r + \dots + b^n$$

where

$$\binom{n}{r} = {}^n C_r = \frac{n!}{r!(n-r)!}$$

Section A

1 The angle θ is greater than 90° and less than 360° and $\cos \theta = \frac{2}{3}$. Find the exact value of $\tan \theta$. [3]

2 Find the equation of the normal to the curve $y = x^3 + 5x - 7$ at the point $(1, -1)$. [5]

3 A is the point $(1, 5)$ and C is the point $(3, p)$.

(i) Find the equation of the line through A which is parallel to the line $2x + 5y = 7$. [2]

(ii) This line also passes through the point C. Find the value of p . [2]

4 AB is a diameter of a circle, where A is $(1, 1)$ and B is $(5, 3)$.

Find

(i) the exact length of AB, [2]

(ii) the coordinates of the midpoint of AB, [1]

(iii) the equation of the circle. [3]

5 Parcels slide down a ramp. Due to resistance the deceleration is 0.25 m s^{-2} .

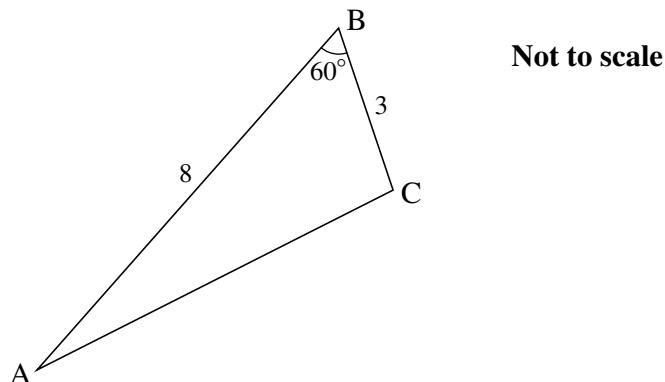

(i) One parcel is given an initial velocity of 2 m s^{-1} . Find the distance travelled before the parcel comes to rest. [3]

(ii) A second parcel is given an initial velocity of 3 m s^{-1} and takes 4 seconds to reach the bottom of the ramp. Find the length of the ramp. [3]

6 The gradient function of a curve is given by $\frac{dy}{dx} = 1 - 4x + 3x^2$.

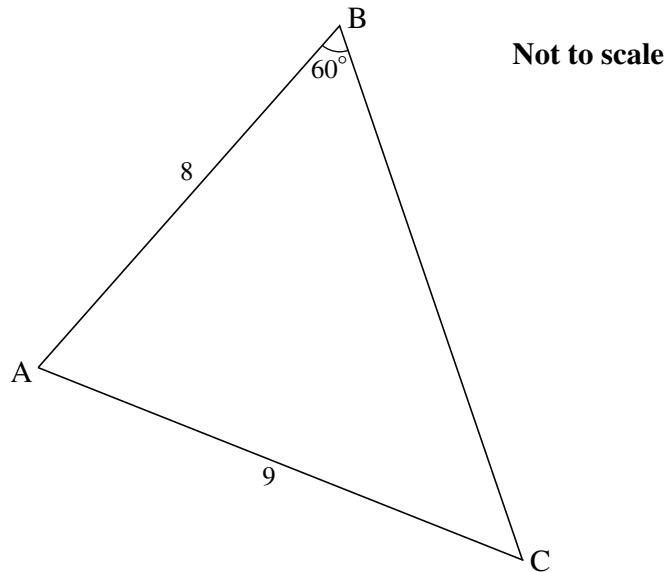

Find the equation of the curve given that it passes through the point $(2, 6)$. [4]

7 The course of a cross-country race is in the shape of a triangle ABC. $AB = 8$ km, $BC = 3$ km and angle $ABC = 60^\circ$.

(i) Calculate the distance AC and hence the total length of the course. [4]

(ii) The organisers extend the course so that $AC = 9$ km.

Calculate the angle BCA. [3]

8 Calculate the x -coordinates of the points of intersection of the line $y = 2x + 11$ and the curve $y = x^2 - x + 5$. Give your answers correct to 2 decimal places. [5]

9 A car accelerates from rest. At time t seconds, its acceleration is given by $a = 4 - 0.2t \text{ m s}^{-2}$ until $t = 20$.

(i) Find the velocity after 5 seconds. [3]

(ii) What is happening to the velocity at $t = 20$? [1]

(iii) Find the distance travelled in the first 20 seconds. [3]

10 (i) Illustrate on one graph the following three inequalities.

$$y \geq x - 1$$

$$x \geq 2$$

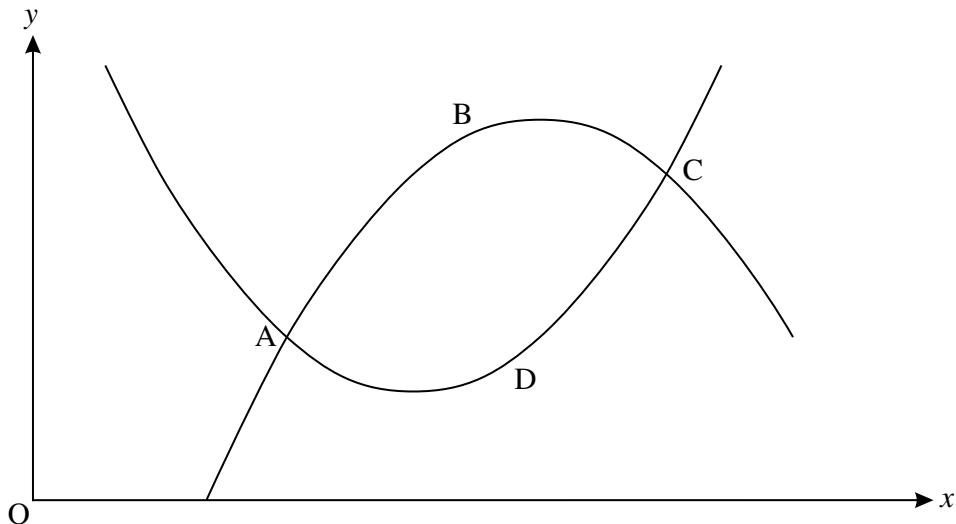

$$2x + y \geq 8$$

Draw suitable boundaries and shade areas that are **excluded**. [4]

(ii) Write down the minimum value of y in this region. [1]

Section B

11 The shape ABCD below represents a leaf.
 The curve ABC has equation $y = -x^2 + 8x - 9$.
 The curve ADC has equation $y = x^2 - 6x + 11$.

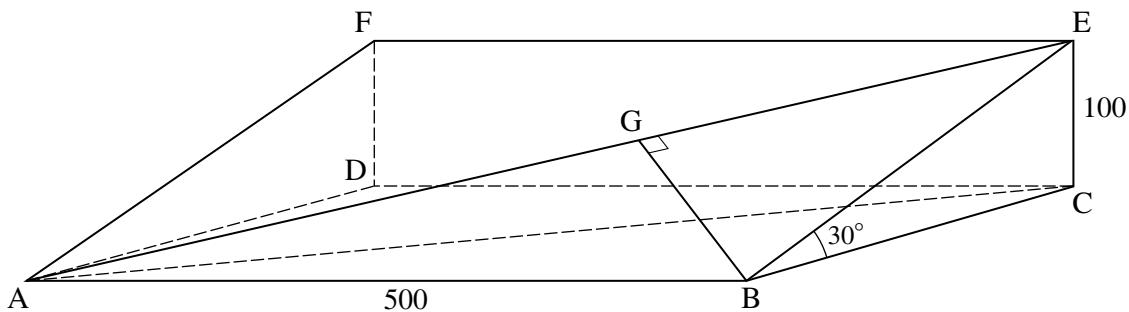

(i) Find algebraically the coordinates of A and C, the points where the curves intersect. [5]

(ii) Find the area of the leaf. [7]

12 The diagram shows a rectangle ABEF on a plane hillside which slopes at an angle of 30° to the horizontal. ABCD is a horizontal rectangle. E and F are 100 m vertically above C and D respectively. $AB = DC = FE = 500$ m.

AE is a straight path.
 From B there is a straight path which runs at right angles to AE, meeting it at G.

(i) Find the distance BE. [3]

(ii) Find the angle that the path AE makes with the horizontal. [4]

(iii) Find the area of the triangle ABE.

Hence find the length BG. [5]

13 In a supermarket chain there are a large number of employees, of whom 40% are male.

(a) One employee is chosen to undergo training.

What assumption is made if 0.4 is taken to be the probability that this employee is male? [1]

(b) 6 employees are chosen at random to undergo training.

(i) Show that $P(\text{all 6 chosen are female}) = 0.0467$, correct to 4 decimal places. [2]

Find the probability that

(ii) 3 are male and 3 are female, [4]

(iii) there are more females than males chosen. [5]

14 (a) (i) On the same graph, draw sketches of the curve $y = x^3$ and the line $y = 3 - 2x$. [2]

(ii) Use your sketch to explain why the equation $x^3 + 2x - 3 = 0$ has only one root. [1]

(b) (i) Show by differentiation that there are no stationary points on the curve $y = x^3 + 3x - 4$. [3]

(ii) Hence explain why the equation $x^3 + 3x - 4 = 0$ has only one root. [1]

(c) (i) Use the factor theorem to find an integer root of the equation $x^3 + x - 10 = 0$. [1]

(ii) Write the equation $x^3 + x - 10 = 0$ in the form $(x - a)(x^2 + px + q) = 0$ where a, p and q are values to be determined. [2]

(iii) By considering the quadratic equation $x^2 + px + q = 0$ found in part (ii), show that the cubic equation $x^3 + x - 10 = 0$ has only one root. [1]

(d) You are given that r and s are positive numbers. What do the results in parts (a), (b) and (c) suggest about the equation $x^3 + rx - s = 0$? [1]
