Candidates answer on the question paper
 A calculator may be used for this paper

OCR Supplied Materials:

None

Other Materials Required:

- Pencil
- Ruler (cm/mm)

Monday 12 January 2009
Morning

Duration: 1 hour

Candidate Forename						Candidate Surname					
--------------------	--	--	--	--	--	-------------------	--	--	--	--	--

Centre Number							Candidate Number				
---------------	--	--	--	--	--	--	------------------	--	--	--	--

INSTRUCTIONS TO CANDIDATES

- Write your name clearly in capital letters, your Centre Number and Candidate Number in the boxes above.
- Use black ink. Pencil may be used for graphs and diagrams only.
- Read each question carefully and make sure that you know what you have to do before starting your answer.
- Answer **all** the questions.
- Do **not** write in the bar codes.
- Write your answer to each question in the space provided, however additional paper may be used if necessary.

INFORMATION FOR CANDIDATES

- The number of marks is given in brackets [] at the end of each question or part question.
- A list of physics equations is printed on page two.
- The Periodic Table is printed on the back page.
- The total number of marks for this paper is **60**.
- This document consists of **24** pages. Any blank pages are indicated.

FOR EXAMINER'S USE		
Section	Max	Mark
A	20	
B	20	
C	20	
TOTAL	60	

EQUATIONS

$$\text{efficiency} = \frac{\text{useful energy output}}{\text{total energy input}}$$

energy = mass \times specific heat capacity \times temperature change

energy = mass \times specific latent heat

fuel energy input = waste energy output + electrical energy output

power = voltage \times current

energy supplied = power \times time

energy (kilowatt hours) = power (kW) \times time (h)

wave speed = frequency \times wavelength

Answer **all** the questions.

Section A – Module B1

1 Mark is on holiday in Africa.

He is sitting in the sun and getting hot.

(a) Mark has to maintain a constant body temperature of 37°C.

(i) Which condition could Mark suffer from if he gets too hot?

Choose from the list.

dehydration

emphysema

hallucination

hypothermia

answer [1]

(ii) The body controls its internal environment.

Write down the name given to this process.

..... [1]

(b) During his holiday, Mark should take precautions to prevent him from getting malaria.

(i) Suggest **one** precaution he should take.

.....
..... [1]

(ii) Write down the name of the **vector** that spreads malaria.

..... [1]

[Total: 4]

2 Deb is following a high protein diet.

(a) Deb has a mass of 80 kg.

(i) Calculate her recommended daily average protein intake (RDA) in grams.

Use the formula

$$\text{RDA in g} = 0.75 \times \text{body mass in kg}$$

You are advised to show your working.

RDA of protein = g

[1]

(ii) Proteins are made from smaller molecules.

Write down the name of these smaller molecules.

.....

[1]

(b) Deb makes sure she eats animal protein because she knows they are **first class proteins**.

Explain why animal proteins are first class proteins.

.....

.....

[1]

(c) Deb is overweight and concerned about her high blood pressure.

Describe **one** risk of having high blood pressure.

.....

.....

[1]

[Total: 4]

3 This question is about genes and chromosomes.

(a) Chromosomes are made of DNA.

DNA contains bases. Write down the **letters** that represent the **four** bases in DNA.

..... [1]

(b) Look at the picture of cats.

The cats were produced by sexual reproduction. They both have the same parents.

(i) A cat's body cell has 38 chromosomes.

How many chromosomes are in a **sperm** cell of a cat?

..... [1]

(ii) The cats in the picture have black fur. Their mother has white fur and their father has black fur.

Use ideas about genes to explain why the cats in the picture have black fur.

..... [2]

(c) When she was older one of the black cats in the picture mated with a cat with white fur.

She had four kittens. Two had black fur and two had white fur.

Draw a fully labelled genetic diagram to explain this.

Use the letters **B** and **b** to represent the alleles for fur colour.

Identify which kittens would be black and which would be white.

[3]

[Total: 7]

4 Brad is a helicopter pilot.

© iStockphoto.com / Slobo Mitic

He knows that he should **not** drink alcohol before he flies.

(a) To which group of drugs does alcohol belong?

Put a tick (✓) in the box next to the correct answer.

depressants

hallucinogens

painkillers

stimulants

[1]

(b) Alcohol affects how impulses cross the gap between neurones.

(i) Write down the name given to this gap.

..... [1]

(ii) Describe how an impulse crosses this gap.

.....
.....
..... [2]

(c) Long term abuse of alcohol damages the liver cells.

Write down the name given to this damage.

..... [1]

[Total: 5]

Section B – Module C1

5 This question is about foods.

(a) Look at the list of foods.

butter

eggs

margarine

potatoes

vitamin C

(i) Which food contains a lot of **protein**?

Choose from the list.

answer [1]

(ii) Which food contains a lot of **carbohydrate**?

Choose from the list.

answer [1]

(b) Chicken must be cooked before it is eaten.

Explain why.

..... [1]

(c) Chicken contains protein molecules.

Explain what happens to the protein molecules when chicken is cooked.

Your answer should include

- what happens to the protein molecules
- the name of the process that changes the protein molecules.

.....

.....

.....

[2]

[Total: 5]

6 This question is about perfumes.

(a) One property of perfumes is that they evaporate easily.

This means that perfumes change from a liquid to a gas easily.

Why do perfumes need to evaporate easily?

..... [1]

(b) Explain what happens during evaporation.

Your answer should include

- what happens to the perfume particles
- ideas about forces between particles.

.....
.....
.....
..... [2]

(c) Perfumes must be tested before they can be used by humans.

Years ago, perfumes were tested on animals.

Write down one **disadvantage** of testing perfumes on animals.

..... [1]

[Total: 4]

7 This question is about polymers.

A polymer called PET has these properties.

- it has a low density
- it has a low melting point
- it won't shatter when it is dropped
- it resists attack by water and acids
- it is flexible

(a) Which use is PET **most** suited to?

Choose from the list.

a cup for hot drinks

making a CD

fizzy pop bottles

a paperweight

answer

Write down a reason for your answer.

.....

[2]

(b) Look at the diagrams. They show the structure of two polymers.

polymer A

polymer B

(i) Polymer **A** has a low melting point.

Suggest why. Use ideas about forces between polymer chains.

.....

[1]

(ii) Polymer **B** is rigid and cannot be stretched.

Suggest why.

.....

[1]

[Total: 4]

Turn over

8 Nick and Lesley test three fuels.

Look at the diagram. It shows the apparatus they use.

Look at the table. It shows their results.

fuel	mass of fuel burned in grams	temperature at start in °C	temperature at end in °C	temperature change in °C
ethanol	0.8	20	40	20
paraffin	0.5	22	42	20
petrol	1.2	19	39	20

(a) Which fuel gives out **most** energy per gram?

Explain your answer.

.....

[2]

13

(b) Energy is given out during the combustion (burning) of fuels.

What is the name of the **type** of reaction which gives out heat?

..... [1]

(c) Look at the results for ethanol.

0.8 g of ethanol burns and heats 100 g of water.

Calculate the amount of energy given out when 0.8 g of ethanol burns.

(Specific heat capacity of water is 4.2 J/g °C.)

The equations on page 2 may help you.

.....
.....
.....

answer J

[2]

(d) Ethanol burns in oxygen. Water and carbon dioxide are made.

Write a **word** equation for this reaction.

..... [1]

(e) Methane is another fuel.

Look at the equation. It shows what happens when methane burns.

Balance the equation. Write your balanced equation below.

[1]

[Total: 7]

9 This question is about cooking.

(a) Abbie uses microwaves to cook some rice.

She puts the rice into a **glass** bowl.

She adds cold **water** to the rice.

She puts the bowl in the microwave oven.

The oven has **metal** walls on the inside.

(i) Why are the oven walls made of **metal**?

..... [1]

(ii) Why does she use a **glass** bowl?

..... [1]

(b) Abbie cooks a curry in the microwave oven.

The water in the curry absorbs the microwaves.

(i) Explain how this affects the water particles.

..... [1]

(ii) How does the centre of the food then get hot?

..... [1]

(c) Abbie cooks some food in pans on a hob.

She uses **cooking oil** in one pan. She uses **water** in the other.

The cooking oil and water are at high temperatures.

They are in identical pans.

Look at the diagram.

She lets them both cool down.

The cooking oil cools to room temperature more quickly.

Look at the information below.

liquid	starting temperature in °C	time taken to cool to room temperature in minutes	mass of liquid in kg	specific heat capacity in J/kg °C
cooking oil	120	25	0.5	860
water	100	60	0.5	4200

Why does the cooking oil cool quicker than the water?

.....

..... [1]

[Total: 5]

10 (a) Emma has single glazing in her house.

Look at the diagram.

The warm air particles in the room bump into the glass.

This energy is transferred to the cool air outside.

Explain how this **conduction** happens.

In your answer write about the movement of particles.

.....

.....

.....

.....

[3]

(b) Emma's house costs a lot to heat. She decides to buy some insulation.

She chooses loft insulation and double glazing.

Look at the table.

insulation	cost to fit	money saved each year in fuel bills	payback time
loft insulation	£200		2 years
double glazing	£5000	£250	

(i) She fits **loft insulation**. This saves her money on her fuel bills.

Calculate how much money this saves her in one year.

.....

answer £

[1]

(ii) Calculate the **payback time** for double glazing.

.....

answer years

[1]

(c) Emma has a gas fire.

Look at the information about the fire.

It shows how many joules of energy are transferred each second.

The **efficiency** of the fire is **75%**.

Calculate the energy **input** for the fire. Use the information in the diagram.

The equations on page 2 may help you.

.....
.....

answer joules

[2]

[Total: 7]

11 (a) Mike wants to sunbathe.

Without sun cream he can safely lie in the sunshine for 30 minutes.

Mike wants to sunbathe safely for 6 hours.

Which factor sun cream should he use?

Choose from **2** **3** **4** **8** **12**

answer [1]

(b) Rico sunbathes too.

Rico has **darker** skin than Mike. He is less at risk from sunbathing.

Write down two ways that dark skin **reduces** the risk.

1
.....

2
..... [2]

[Total: 3]

12 This question is about communications.

(a) (i) Look at the diagram of an optical fibre.

A ray of light travels in the fibre.

It comes out at the other end.

Describe how the light travels through the fibre.

You may draw on the diagram to help your answer.

.....
.....
.....

[2]

(ii) Optical fibres are used to transmit information.

Information can be carried by **analogue** or **digital** signals.

Write down one **difference** between analogue and digital signals.

.....
.....

[1]

(b) Digital signals carry **more information** than analogue signals.

This makes the picture on a digital TV better, with **less interference**.

(i) Explain why **more information** can be carried.

.....
.....

[1]

(ii) Explain why there is **less interference** on a digital TV.

.....
.....

[1]
