Total Marks

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- Show all the steps in any calculations and state the units.
- Some questions must be answered with a cross in a box ☒. If you change your mind about an answer, put a line through the box ~~☒~~ and then mark your new answer with a cross ☒.

Information

- The total mark for this paper is 120.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Write your answers neatly and in good English.
- Try to answer every question.
- Check your answers if you have time at the end.

Answer ALL questions.

1 The Periodic Table is shown on page 2.

(a) In the Periodic Table, which number increases from 3 to 10 in Period 2? (1)

(b) In the Periodic Table, which number increases from 9 to 226 in Group 2? (1)

(c) An atom of boron contains protons, neutrons and electrons.

Use words from the box to complete the sentences.

Your may use each word once, more than once or not at all.

protons	neutrons	electrons
---------	----------	-----------

(i) The particles with the smallest mass are (1)

(ii) The particles with a negative charge are (1)

(iii) The two types of particle in the nucleus of a boron atom (1)

are and

(iv) In a boron atom there are equal numbers of (1)

..... and

(v) The element boron has isotopes. (1)

These isotopes have different numbers of

- 4 The table gives information about some of the elements in Group 7 of the Periodic Table.

Element	Colour	Melting point in °C	Boiling point in °C
fluorine	yellow	-220	-188
chlorine		-101	-35
bromine	red-brown	-7	59
iodine	grey	114	

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

- (a) What is the colour of chlorine at room temperature?

(1)

- A black
 B blue
 C green
 D orange

- (b) The trend in the boiling points for these elements is similar to the trend in their melting points.

Predict a value for the boiling point of iodine.

(1)

°C

- (c) Astatine is another element in Group 7.

Predict its colour and physical state at room temperature.

(2)

colour

physical state

(d) The elements in Group 7 have similar chemical reactions because they have the same number of

(1)

- A electrons
- B electron shells
- C outer electrons
- D protons

(e) A student wrote these statements about the reactions of the Group 7 elements.

- The reactivity of the elements decreases down the group.
- The elements form ions with a single positive charge.
- The formula of an astatine molecule is At_2
- The equation for the reaction between chlorine and potassium bromide solution is $\text{Cl}_2 + 2\text{NaBr} \rightarrow 2\text{NaCl} + \text{Br}_2$
- In the reaction between bromine and potassium iodide, bromine acts as a reducing agent.

Three of the statements contain **one** incorrect word.

Complete the table to show each incorrect word and the correct word that should be used to replace it.

(3)

Incorrect word	Correct word

(Total for Question 4 = 8 marks)

5 A student investigates the pigments found in some vegetables and fruit.

She obtains some coloured vegetable and fruit extracts from carrots, tomatoes and sweet potatoes.

She places a spot of each extract on chromatography paper, along with spots of the three pigments beta-carotene, chlorophyll and lycopene.

Her teacher provides a solvent containing volatile, flammable organic compounds for the experiment. The diagram shows the apparatus at the start of the experiment.

Key to vegetable and fruit extracts and pigments

V1 = carrots

V2 = tomatoes

V3 = sweet potatoes

P1 = beta-carotene

P2 = chlorophyll

P3 = lycopene

(a) (i) Explain why it is important for the solvent level to be below the spots.

(1)

(ii) State two potential problems that are prevented by fitting the tank with a lid.

(2)

1

2

(b) The diagram shows the chromatogram at the end of the experiment.

Key to vegetable and fruit extracts and pigments

V1 = carrots

V2 = tomatoes

V3 = sweet potatoes

P1 = beta-carotene

P2 = chlorophyll

P3 = lycopene

Which three of the statements A, B, C, D and E are supported by the chromatogram?

Place a cross in three boxes to indicate your choice.

(3)

- A Chlorophyll is **not** present in carrots, sweet potatoes or tomatoes.
- B Beta-carotene is present in carrots but **not** present in tomatoes.
- C Both beta-carotene and lycopene are present in sweet potatoes.
- D Lycopene is present in tomatoes but **not** present in carrots.
- E Both carrots and tomatoes contain a pigment **other than** beta-carotene, chlorophyll and lycopene.

- (c) One of the pigments present in the vegetable extracts is not shown in the chromatogram. It appears as a very faint spot 1.3 cm above the starting line.

Calculate its R_f value using the expression

$$R_f = \frac{\text{distance travelled by pigment}}{\text{distance travelled by solvent}} \quad (2)$$

$R_f =$

- (d) Suggest a reason why there is a spot on the starting line in the chromatogram for sweet potatoes.

- 9 A student investigates the reactions between acids and alkalis. He uses this apparatus to measure the temperature change in the reaction between dilute hydrochloric acid (HCl) and aqueous sodium hydroxide (NaOH).

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

This is his method.

- add 25 cm³ of dilute hydrochloric acid to the polystyrene cup and record the steady temperature
- add some aqueous sodium hydroxide and stir the mixture
- record the maximum temperature of the mixture

The student repeats the experiment using different volumes of aqueous sodium hydroxide.

- (a) What is the advantage of using a polystyrene cup rather than a glass beaker?

(1)

(b) These are the thermometer readings from one experiment.

before adding
aqueous sodium hydroxide

after adding
aqueous sodium hydroxide

Use these readings to complete the table.

(3)

temperature in °C after adding aqueous sodium hydroxide	
temperature in °C before adding aqueous sodium hydroxide	
temperature change in °C	

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

(c) The table shows the results of some experiments.

The initial temperature of both solutions in all the experiments is 17.6 °C.

Volume of aqueous sodium hydroxide added in cm ³	Temperature of mixture in °C
0.0	17.6
5.0	19.7
10.0	21.6
15.0	23.6
20.0	23.8
25.0	23.0
30.0	22.2

- (i) Plot these results on the grid. Draw a straight line of best fit through the first four points, and another straight line of best fit through the last three points. Extend both lines so that they cross each other.

(4)

(ii) For the point where the lines cross, write down

(2)

the temperature of the mixture =°C

the volume of aqueous sodium hydroxide =cm³

(d) In a similar experiment, using a different acid and alkali, the student records these results.

volume of dilute sulfuric acid = 25.0 cm³

volume of aqueous potassium hydroxide = 22.7 cm³

initial temperature of each solution = 18.9 °C

final temperature of mixture = 24.7 °C

Calculate the heat energy change during this reaction using this equation.

heat energy change = mass × 4.2 × temperature change

Assume that 1.0 cm³ of each solution has a mass of 1.0 g.

(3)

heat energy change =J

(Total for Question 9 = 13 marks)

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

10 Sodium thiosulfate solution and dilute hydrochloric acid react together slowly to form a precipitate of sulfur. This precipitate eventually makes the mixture go cloudy.

A student uses this method.

- place 20 cm³ of sodium thiosulfate solution and 20 cm³ of water in a conical flask
- add 10 cm³ of dilute hydrochloric acid to the flask
- place the flask on a piece of paper marked with a black X
- time how long it takes before the X can no longer be seen

(a) The equation for the reaction is

Before starting her experiments, the student considers the risk to her of sulfur dioxide escaping from the flask. She uses this information.

concentration of sodium thiosulfate solution = 0.300 mol/dm³

volume of sodium thiosulfate solution = 20 cm³

volume of water = 20 cm³

volume of hydrochloric acid = 10 cm³

- (i) Calculate the mass of sulfur dioxide formed in this experiment.
The hydrochloric acid is in excess.

(3)

mass of sulfur dioxide formed =g

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

(ii) The solubility of sulfur dioxide at room temperature is 100 g/dm^3 .

Use this additional information to explain whether any sulfur dioxide gas escapes from the flask.

(2)

(b) At what point in the experiment should the student have started a timer?

(1)

(c) She repeats the experiment using the same volumes and concentrations of solutions, but at different temperatures. The graph shows her results.

(i) The result at (14, 42) is anomalous.

Explain one mistake the student may have made to cause this anomalous result.

(1)

(ii) Use the graph to find the time taken for the X to be no longer seen at $35 \text{ }^\circ\text{C}$.

(1)

- (d) The student repeats the experiments using nitric acid in place of hydrochloric acid. She records the times for the \times to no longer be seen, then uses the times to calculate the rate of reaction at each temperature. The graph shows the results she plots.

- (i) Suggest two reasons why the results are least accurate at higher temperatures. (2)

1

.....

2

.....

- (ii) The student wrote this explanation for the shape of the graph.

As the temperature increases, the rate of reaction increases.
This is because there are more frequent collisions between particles of reactants.

Use the particle collision theory to explain another more important reason for the increase in reaction rate.

(2)

.....

.....

.....

.....

- (e) Another student uses the same reaction to investigate the effect of changing the concentration of the sodium thiosulfate solution on the rate of reaction.

Give three variables that the student must control in this investigation to obtain valid results.
